DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE LLOYD

No. 5454. Decided February 1, 1949

[— F.2d —; 80 USPQ 499]

1. APPEAL TO CCPA—DECISION OF BOARD OF APPEALS—EFFECT OF GENERAL AFFIRMANCE.

Where there is no reference in the decision of the Board to the functional nature of the characteristics named in the claims, but it is clear that the Examiner considered this during the prosecution of the case and gave it as a reason for rejection, *Held* that, the Board not having overruled the Examiner upon this point, we treat the latter's findings as having been affirmed.

2. PATENTABILITY — COMPOSITION — RESULTS OF FUNCTIONS.

Where the several properties specified in the claims are not limitations present in the ingredients but are results or functions which are present in the completed composition, *Held* that they are not limitations which enter into the patentability of the claims.

3. SAME—PARTICULAR SUBJECT MATTER—HEAT INSULATING MATERIAL.

Certain claims for a molded heat insulating material of cellular structure *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 441,235.

AFFIRMED.

Lester F. Dittenhoefer for Lloyd.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

GARRETT, *C. J.*:

We have here an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the rejection by the Primary Examiner of seven claims, being all the claims, of appellant's application for patent entitled "For Heat-Insulating Material." The claims are numbered respectively 4, 5, 14, 15, 16, 17, and 18.

In the brief for appellant it is stated:

> The problem that confronted appellant was to provide an integral insulation material having, among others, the following physical characteristics:
> (1) An insulation temperature range up to and in excess of 1000° F.
> (2) Light weight and low density.
> (3) Low thermal conductivity.
> (4) A high modulus of rupture.
> (5) Low percentage of volume shrinkage when heated.
> (6) Resistance to compression and abrasion.
> (7) A low percentage of moisture absorption by volume.
> (8) Capability of withstanding a soaking heat of 1250° F.
> (9) Unaffected by immersion in water.
> These characteristics of the material are set forth in appellant's specification.

The brief of the Solicitor for the Patent Office gives the following epitome of the subject matter:

> Appellant's specification describes an alleged new molded, porous, calcareo-silicious material for thermal insulation. In preparing such material, a slurry in water of comminuted calcium oxide (lime), silica, uncalcined bentonite and asbestos fiber is prepared, the bentonite and asbestos components amounting to not over 15% each of the total dry weight of the finished product. The mixture is heated below the boiling point of water until a jelly-like or viscous consistency results, and then placed into molds or forms of the desired shape. The mixture is then thermo-set in its molded shape by subjecting to heat alone or to both heat and steam, and then finally dried. The finished product is said to comprise principally calcium silicate, formed by reaction of the calcium oxide and silica, with minor proportions of asbestos and bentonite, and to possess a very low density, low thermal conductivity, low shrinkage on heating, high tensile strength, and resistant to compression, abrasion and water. The product is alleged to be a superior, low cost, light weight insulation having a wide temperature range and having the requisite structural strength to withstand rough treatment in transportation, application and use.

The Board regarded claim 4 as representative. We quote it and, for reasons hereinafter appearing, quote also claims 14 and 17.

> 4. A heat-insulating material comprising a shaped and hardened body of cellular structure consisting of calcium silicates reenforced with inorganic fibres, and containing a hydrophilic colloid in an amount not in excess of about fifteen percent of the total dry weight of the material.
>
> 14. A molded insulating material of cellular structure, comprising calcium silicate, bentonite, and asbestos fibres, said material having the following characteristics and properties: weight about twelve pounds per cubic foot; thermal conductivity of not more than 0.60 B. T. U. per hour per degree of Fahrenheit inter-face temperature difference per unit of thickness, at a hot plate temperature of about 220° F.; effective insulating temperature range up to about 1000° F.; tensile strength of not less than fifty to sixty pounds per squere inch; and of being unaffected by water.
>
> 17. A light-weight molded cellular heat-insulating material comprising a mixture of about 4 parts by weight of calcium oxide, about 6¼ parts by weight of silica, and about 2¼ parts by weight each of bentonite and asbestos fibres.

The references relied upon by both the Examiner and the Board are the following patents: Kern, 1,666,936, Apr. 24, 1928; Huttemann et al., 1,932,971, Oct. 31, 1933.

The Kern patent "relates to manufacturing bricks, tiles and other elements useful in the manufacture of houses and buildings, such products being of the general nature of sand lime bricks, but being substantially improved in regard to their properties, * * *." The specification describes the process of manufacturing the articles by mixing "highly pure" sand with slaked lime and supplying water in sufficient amount to enable the molding of the brick, there being added to the mixture kieselguhr, which is a species of diatomaceous earth, and a clay

Vol. 622 • No. 1 Tuesday, May 3, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, including annual index, $21.00; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

such as bentonite. It is taught that such added materials produce lime bricks that are much stronger than those not having such added ingredients. It is also taught by Kern that both the kieselguhr and bentonite promote silicification and that porosity occasioned by the admixture of the kieselguhr causes acceleration of the hardening of the bricks, which are first heated in a steam atmosphere to produce calcium silicate which acts as a binder.

The Huttemann patent relates "to building material and particularly to heat-insulating light weight blocks with a good mechanical strength."

The Board points out that his patent discloses:

> • • • a light weight molded cellular heat-insulating material in the form of calcium silicates reinforced with asbestos fibers. The materials employed by Huttemann et al. in making their material are the same as those employed by the appellant here with the sole exception that the patentees do not use bentonite. As disclosed in the patent specification, sand and lime are mixed together in proper proportions with water to form a silicate in which there is no uncombined lime. This material is stabilized with asbestos fiber to increase the mechanical strength of the final product. After thoroughly drying, all but the chemically combined water is driven out, leaving a porous structure which has high heat-insulating weight, that is, of the order of 10 to 60 pounds per cubic foot.

The Board stated that neither of the references directly anticipates the claims here involved, but pointed out that "both show essential and important elements of appellant's composition in combination," and commented:

> In view of the disclosures in these two patents we are in agreement with the Examiner's conclusion that invention would not be involved in improving Huttemann et al.'s composition by following the teaching of Kern who shows that the addition of bentonite to calcium silicates to provide a porous structure is not new with the appellant. We consider that the products produced by both patentees are sufficiently similar so that it would be obvious to modify either one in view of the other, that is to say, by adding the bentonite of Kern to the composition of Huttemann et al. or, for that matter to add asbestos fibers to the Kern composition for the obvious purpose of increasing the mechanical strength thereof would be an entirely obvious procedure.

The Board's discussion of claims 14, 16, and 17 is hereinafter quoted.

The brief on behalf of appellant seemingly regards the concession of the Board hereinabove noted as being of much importance in the case, saying:

> The decision of the Board states • • • that: *"Neither of these references directly anticipates the claims* but both show essential and important elements of appellant's composition in combination." Therefore, the issue is primarily that of invention. [Italics quoted.]

Appellant concedes that all elements of his combination are old, but insists that it does not follow from this that invention is lacking. His brief says:

> Both the Huttemann and the Kern patents relate to methods of making building materials. Neither of them relate specifically to a high-temperature insulation, nor do either show all of the elements of appellant's insulation in combination.

We may remark at this point that there is no contention that appellant's art is not analogous to the art of the references.

The brief of the Solicitor for the Patent Office before us maintains that both the Examiner and the Board erred in a certain particular, which, however, does not affect the conclusion. In the early part of his brief it is said (page references omitted as indicated by asterisks):

> At the outset it is desired to point out that, though both the Examiner and Board of Appeals, treated the appealed claims as a group, apparently on the assumption that all the claims stand or fall together, and the decision of the Board states that neither of the references directly anticipates the claims, • • • the actual situation is markedly different. As considered below all the claims have been treated as though they specifically included bentonite in the composition—appellant in his brief • • • falls into the same error. Actually, claims 4 and 16, on the one hand, call broadly for a "hydrophilic colloid," while claims 5, 14, 15, 16 [17] and 18, on the other hand, specify "bentonite."

Subsequently, in the brief the solicitor discusses the distinctions among the claims, saying, inter alia, in connection with the discussion of claim 4, that it is believed that the Huttemann et al. patent reference "is in fact better than the Board considered it," for the reason that "each and every limitation thereof has been shown [the brief reads the claim upon the Huttemann et al. disclosure] to be readable upon the patent." It is urged, therefore, that the concession by the Board that neither of the references directly anticipates the involved claims, hereinbefore referred to, "should be of no benefit to appellant," citing *In re Osse*, 28 CCPA (Patents) 1267, 120 F.2d 1022, 50 USPQ 57, 533 O. G. 266; *In re Lowenstein*, 35 CCPA (Patents) 825, 165 F.2d 458, 76 USPQ 322, 609 O. G. 247.

From a careful study of the case in the light of appellant's arguments we fail to find any element in his claim 4, supra, which is not present in the Huttemann patent, except that his patent makes no specific mention of bentonite.

Claim 5 differs from claim 4, supra, in just two particulars; viz., instead of "inorganic fibres" it names "asbestos fibres" and instead of "hydrophilic colloid" it names "bentonite." Huttemann recites in his specification:

> The slurry hereinbefore described may be further stabilized and the mechanical strength of the final product may be increased by the inclusion of a small amount of fibrous material, such as asbestos fibers, the amount being on the order of several per cent.

So far as the bentonite is concerned, it might be questioned whether its substitution for some of the several materials named in the Huttemann patent, said to "possess the ability to combine with hydrated lime when subjected to heat," would be invention, but the tribunals of the Patent Office made no specific holding to that effect, and whatever may be the legal situation in that regard, it is immaterial here, because the patent to Kern expressly names bentonite as one of several forms of hydrated aluminum silicates, which when used "have the effect of further promoting the silicification of the lime."

Claim 14 is broader than claim 5 in that it places no limitation upon the amount of bentonite to be used. It will be observed that it names specifically just three ingredients, to wit: calcium silicate, bentonite, and asbestos fibres, for producing the molded insulating material of cellular structure, and that it recites certain characteristics of the molded material, such as weight, thermal conductivity, insulating temperature, tensile strength, and "of being unaffected by water."

It was the view of the Board that the characteristics or properties of appellant's finished product as expressed in claim 14 would be inherent in the Huttemann et al. composition when modified by the teaching of Kern relative to the use of bentonite. In so holding, the Board seems to have gone somewhat further than the Examiner.

Concerning claim 14 the Examiner, in his statement following the appeal to the Board, said:

> Claim 14 recites the product as having a certain thermal conductivity. While this would be inherent in Huttemann's composition as modified by the teaching of Kern, it is not thought that the recitation of a functional property of known desirability may be relied on for patentability.

It will be noted that the only characteristic named in the claim specifically mentioned by the Examiner was "thermal conductivity." The Board, however, included all the named characteristics (seemingly proceeding upon the theory that the Examiner had done so) and held "that the various physical properties of the material as defined in claim 14 would be inherent in the Huttemann et al. composition as modified by the teaching of Kern • • •."

[1] We do not find in the decision of the Board any reference to the functional nature of the characteristics named in the claims, but it is clear that the Examiner considered this during the prosecution of the case and gave it as a reason for rejection. Under the long-established practice, the Board not having overruled the Examiner upon this point, we treat the latter's finding as having been affirmed, *In re Boyce*, 32 CCPA (Patents) 718, 144 F.2d 896, 63 USPQ 80, 568 O. G. 568.

Appellant's reasons of appeal cover this point, and it is quite earnestly argued on his behalf before us, not only that the physical characteristics of the molded insulating material defined in claim 14 would not be inherent in the composition of Huttemann when modified by the use of bentonite, as taught by Kern, but also that claim 14 is not functional.

[2] We have carefully considered the arguments so made, but we are not convinced of their soundness. The claim defines a material comprised of the three ingredients; viz., calcium silicate, bentonite, and asbestos fibres. It does not even mention the use of water as an ingredient in making the finished product, although it does say that such product is unaffected by water. The several properties of weight, thermal conductivity, etc., specified in the claims are not limitations present in the ingredients—calcium silicate, bentonite, or asbestos fibres—but are results or functions which are present in the completed composition. They are not, therefore, limitations which enter into the patentability of the claims, and to allow the claims upon their bases would be in conflict with the rule clearly stated by the Supreme Court of the United States in the case of *United Carbon Co. et al. v. Binney & Smith Co.*, 317 U. S. 228, 546 O. G. 598, wherein there are pertinent citations of other cases, and by this court in the case of *In re Fullam et al.* (see also decisions therein cited), 34 CCPA (Patents) 1018, 161 F.2d 247, 73 USPQ 399, 608 O. G. 189.

Claim 15 was not specifically discussed by either the Examiner or the Board. It defines the ingredients of a "thermostat, porous, molded body" of heat-insulating material as being composed of lime, asbestos fibres, and bentonite, thus virtually duplicating claims 5 and 14 as to the ingredients used. The claim concludes with the statement, "the bentonite being rendered substantially inert to absorption of water by reaction of at least a portion thereof with the lime." This statement obviously is purely functional and under the last authorities cited, supra, adds nothing to the patentability of the claim.

Claims 16 and 17 differ only in the fact that claim 16, like claim 4, supra, calls for the use of a "hydrophilic colloid" and "inorganic fibres," while claim 17, supra, like claim 5, specifies "bentonite" and "asbestos fibres."

Both claims recite the same proportions of the ingredients. See claim 17, supra. The Examiner held that such proportions "obviously vary but little from Huttemann's proportions and produce results which vary at most only in degree therefrom." The Board's comment reads:

> With regard to the question of proportions as defined in claims 16 and 17 these vary but little from Huttemann et al.'s proportions, as the Examiner points out, and differs, if at all, as a matter of degree and not as a difference in kind.

Appellant contends that his proportions vary widely from the proportions defined in the prior art and insists the difference is one of kind rather than degree. We quote the following from his brief:

> • • • the patentees [referring here to Huttemann et al.] describe use of 15 to 55 parts lime and 45 to 85 parts silica. In the one case, considering that the total solids are 100 parts, the relationship of lime to silica is 15 : 85, or 1 part lime to 5.666 parts silica. In the other the relationship is 55 : 45, or 1 part lime to 0.818 parts silica. Appellant's claims call for 4 parts calcium oxide (lime) and 6½ parts silica, or 1 part lime to 1.625 parts silica. It is evident, therefore, that the Board's holding that the proportions defined in claims 16 and 17 "vary but little from Hutteman, et al.'s proportions" is not well founded in fact, particularly when it is borne in mind that Huttemann makes no disclosure whatsoever of use of bentonite or like hydrophilic colloid. Certainly, Huttemann's statement that "several per cent" of asbestos [fibres] may be added does not anticipate appellant's clear and definite disclosure of use of 2¼ parts of asbestos fibers.

The specific rejection of claims 16 and 17, both by the Board and the Examiner, is based on Huttemann alone, although in the blanket rejection of all of the claims Kern is also included.

The solid ingredients stated by Kern in the example given on page 1, lines 80–85, of his patent are as follows:

Sand	100 parts by weight
Kieselguhr	3 parts by weight
Slaked lime	8 parts by weight

Those proportions, which are also recited in claim 2 of the patent, differ so widely from appellant's proportions as not to require further discussion.

At page 2, lines 79–82, Kern says:

> "If clay or other aluminum silicates are to be employed, the proportions thereof can likewise vary a good deal, say from 10% up to about 25%."

Apparently that statement is relied upon as showing that Kern uses "10–25% of bentonite." However, as the total parts by weight of the solid ingredients is 111, if bentonite were used in the stated percentages the amount of that substance added would be from 11.1 to 27.75 parts by weight. That is far in excess, and very different from appellant's use of bentonite in an amount of 2¼ parts by weight.

We have already shown that appellant's proportions of lime and silica are materially different from those of the Huttemann reference, and since the latter uses no bentonite, it is submitted that the difference is one of kind rather than degree.

It is pointed out in the brief of the Solicitor for the Patent Office that in reaching the conclusion that his proportions vary from those of the prior art, appellant's calculations utilize only the extremes disclosed in the patent, and "It is submitted that values intermediate the extremes disclosed for the silica and lime are clearly as much a part of the teaching of the reference disclosure as those specifically set forth." It is further pointed out that

appellant's proportions of silica and lime fall within the range of the reference and that no new unexpected or unobvious result has been shown to flow from the proportions named in the claims, and upon the authority of this court's decision *In re Marcus T. Lothrop*, 19 CCPA (Patents) 1183, 58 F.2d 429, 13 USPQ 224, it is urged that invention is not present, 422 O. G. 609.

It is further pointed out that there does not appear to be anything critical about the proportion of asbestos fibres named in claim 17.

We are not convinced that the conclusion reached by the tribunals of the Patent Office relative to claims 16 and 17 was erroneous.

Claim 18 was included with those rejected upon Huttemann et al. in view of Kern. It was specifically referred to in the Examiner's short statement as being so rejected. The Board made no specific reference to it. The brief for appellant only says of it that it differs from claim 5 in that it does not include asbestos fibres.

There is no contention that this omission adds to the patentability of the claim, and we think it obvious that it does not do so.

[3] Although both the Examiner and the Board appear to have erred in this case by treating all the claims as if they specifically included bentonite, we are not convinced that the conclusion reached was erroneous. In consequence decision is affirmed as to the conclusion.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

IN RE POPE

No. 5517. Decided March 1, 1949

[— F.2d—; 81 USPQ 107]

1. PATENTABILITY—PROCESS—COMBINING REFERENCES.
   Where the question in issue is one of invention over the prior art, *Held* that in negativing patentability of a claimed process, more than one reference may be used to show that the claimed steps are old and that no invention was involved in combining them.
2. SAME—SAME—REJECTION ON APPARATUS.
   Held that an apparatus disclosure in the prior art, with no description of any process, may negative patentability of a claimed process if the inherent operation of the apparatus carried out the process.
3. SAME—PARTICULAR SUBJECT MATTER—METHOD OF LUBRICATION.
   Certain claims to a method of lubricating a reciprocating traveler ring of a twisting machine *Held* properly rejected as lacking invention over the prior art.

APPEAL from the Patent Office. Serial No. 516,236.

AFFIRMED.

Evans & McCoy (*Frank S. Greene* of counsel) for Pope.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

O'CONNELL, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the action of the Primary Examiner in rejecting claims 1 and 2 in appellant's application for a patent for alleged new and useful improvements "in Twister Ring Lubricating Device."

The appealed claims are drawn to a method of lubricating reciprocating traveler rings of twisting machines, and were rejected as lacking invention over the prior art of record. Ten claims, directed to the device, have been allowed.

The appealed claims read as follows:

1. The method of lubricating a reciprocating traveler ring of a twisting machine which comprises forcing a minute measured quantity of a plastic solid lubricant through the ring to its inner face at intervals timed with respect to the reciprocating movements of the ring.

2. The method of lubricating a reciprocating traveler ring of a twisting machine which comprises maintaining a body of lubricant exteriorly of the ring and an unbroken column of a plastic solid lubricant from said body to the inner face of the ring, and forcing a minute measured quantity of lubricant from said body into the column at intervals timed with respect to reciprocating movements of the ring to cause a corresponding quantity of lubricant to flow to the inner face of the ring.

The references are: Boyd, 845,510, Feb. 26, 1907; Banfield, Jr., et al., 2,005,725, June 25, 1935; Stahl, 2,233,460, Mar. 4, 1941.

Appellant's application relates to the lubrication of a spinner or traveler ring used in the high-speed spinning of yarn. In his brief it is pointed out that the success of his method is due to the intermittent delivery of minute measured quantities of solid plastic lubricant to the inner bearing face of the ring. The solid plastic lubricant employed, as described in appellant's specification, is "such as a high melting point grease."

The patent to Boyd relates to rings and travelers, which are used in spinning, twisting, and analogous machines. It has for its object the more convenient manipulation and lubrication of such machines. One part of the invention refers to the lubrication of rings and travelers. In carrying out his method, Boyd fixes the ring in a ring rail, upon which he forms a chamber with a screwed plug. From the chamber he bores a hole through the ring rail and the ring, and by means of a screwed plug he forces the lubricant into the ring. The patentee does not state that the lubricant employed by him consists of grease.

The patent to Banfield, Jr., et al. relates to spinning and twister frames of the ring type and to the lubrication thereof. It was customary, according to the specification, for the machine attendant in some cases to apply grease to the rings of the twister frames, "individually," while the frame was running. This was "done by stopping the spindles one at a time by means of the knee brake and wiping a small quantity of grease on to the inner surface of the ring by hand."

Lubrication of the rings in the manner described was unsatisfactory for many reasons and, as the specification further states, the patentees devised an automatic apparatus which "When the twister frame is in operation the apparatus • • • operates automatically to deliver oil in approximately predetermined quantities and at predetermined intervals to all of the rings in the ring rail of the machine." For the purpose of lubricating the rings, oil or other lubricating material was delivered from a common source, and a pump was provided with mechanism for operating the pump intermittently from the driving mechanism of the twister frame.

The patent to Stahl relates to a ring assembly, and more particularly to a ring assembly for use in the high-speed spinning and twisting of yarns, "in which the supply of lubricant to the bearing surface is so controlled that neither loss of lubricant nor soiling of the yarn will occur." A reservoir holds the main supply of oil, and a suitable baffle is provided in order that the oil in the reservoir is not disturbed by air. As described in the specification, the oil from the reservoir is forced toward the bearing of the spinning ring by a piston. The length of the piston may be adjusted by a screw provided for that purpose. It is also specified that other means may be utilized for actuating the piston, "since any other movement which regularly or intermittently depresses the piston will force the lubricant through the connecting ducts and out on to the bearing surface."

The Examiner rejected claim 1 as unpatentable over the patent to Stahl on the ground that the operation described in the patent would meet the method defined in the claim. The Examiner rejected the claim on the further ground that the patent to Boyd discloses a lubricator of a type widely used for dispensing solid lubricant, and that a turn of the screw described in the specification thereof would force some lubricant to the inner face of the ring. That step, the Examiner held, could be performed manually by the operator during reciprocation of the ring rail and would be timed with the reciprocation, thereby meeting the method defined in claim 1.

After pointing out that in a method claim the kind of lubricant employed is immaterial, the Examiner also held that only mechanical skill would be involved in substituting the pump as embodied in the disclosure of the patent to Stahl for the chamber with the screwed plug as disclosed in the patent to Boyd.

The Examiner also rejected claim 1 as unpatentable over the disclosure of the patent to Boyd in view of the disclosure of the patent to Banfield, Jr., et al. His decision on the point reads:

Banfield, Jr., et al. teaches also the operation of forcing measured quantities in timed relation to the reciprocation of the ring, since the pump is driven from the cam shaft of the builder motion. • • • From this it seems clear that any mechanic could provide means to operate the lubricator of Boyd from the machine in timed relation to the reciprocation of the ring.

Claim 2 has the additional limitation of maintaining a body of lubricant exteriorly of the ring and an unbroken column of a plastic solid lubricant from said body to the inner face of the ring. The claim was rejected by the Examiner on the ground that this feature was present in the patent to Boyd, and that the remainder of the claim was unpatentable for the reasons hereinbefore explained in the rejection of claim 1.

The Board of Appeals reviewed the grounds of rejection stated by the Examiner and found no error in his decision. Accordingly, it was affirmed. On a petition to the Board for reconsideration, an affidavit was submitted on behalf of appellant which stated that the lubricator shown in the disclosure of the patent to Boyd was inoperative and would not work with a solid lubricant. The Board held that the affidavit, at best, failed to establish inoperativeness of the Boyd device in the manner relied upon by the Examiner, and accordingly denied the petition with respect to making any change in the Board's original decision.

The plastic solid lubricant called for by the claims does not distinguish them from the grease disclosed in the patent to Banfield, Jr., et al. Furthermore, the application of such lubricant through the ring to its inner face is definitely suggested by the disclosure of the prior art as represented by the patents to Boyd and Banfield, Jr., et al.

With respect to appellant's contention that no reference of record suggests the idea of feeding a minute measured quantity of the lubricant to the inner face of the ring at timed intervals, it is only necessary to observe, as hereinbefore set forth, that in the patent of Banfield, Jr., et al., the lubricating material was automatically delivered in approximately predetermined quantities and at predetermined intervals; and that the piston disclosed in the patent to Stahl "regularly or intermittently" performs the same function and "is so controlled that neither loss of lubricant nor soiling of the yarn will occur."

As correctly pointed out by the Solicitor for the Patent Office, "Predetermining the quantity of lubricant of necessity imposes upon the operator the determination of how much lubricant to use," and that one skilled in the art and following the teachings of the process defined by the patent to Banfield, Jr., et al., may find that a little lubricant may be sufficient for the required step, if applied often enough.

[1], [2] The Solicitor concedes, as appellant contends, that ordinarily claims to a process can be anticipated only by a similar process. The Solicitor takes the position, however, and there is merit in it, that the question here in issue is not one of anticipation, but of invention over the disclosure of the prior art; that in negativing patentability of a claimed process, more than one reference may be used to show that the claimed steps are old and that no invention was involved in combining them; and that an apparatus disclosure in the prior art, with no description whatever of any process, may negative patentability of a claimed process if the inherent operation of the apparatus carried out the process.

[3] Each of the references cited by the tribunals of the Patent Office relates to an apparatus, but also discloses many steps of process in discussing means for performing the respective functions of the apparatus. In so far as those disclosed steps anticipate or suggest the steps of the process defined in the appealed claims, they constitute a valid reference with respect thereto.

A careful analysis of the evidence submitted in the record leads to the conclusion that no error was made by the Board in its disposition of the appealed claims. In view of that conclusion, it is deemed unnecessary to discuss other points to which counsel have directed their respective arguments, and the decision of the Board of Appeals is accordingly affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

THE SCHOLL MFG. CO., INC. *v.* IRVING SIMON, ETC.

No. 5527. Decided March 1, 1949

[— F.2d —; 81 USPQ 126]

1. TRADE-MARKS—OPPOSITION—AMENDMENT OF NOTICE.
Where during the taking of its testimony appellant introduced three additional registrations which it claims to be somewhat more similar to appellee's mark than that relied upon in the notice of opposition, and thereafter moved to amend the notice of opposition to conform the pleadings to the proof under Rule 15(b) of the Federal Rules of Civil Procedure, *Held* that Sec. 6 of the Trade-Mark Act of Feb. 20, 1905, as amended, precludes any amendment setting up new grounds of opposition if filed more than thirty days after publication of the mark sought to be registered.

2. APPEAL TO COURT OF CUSTOMS AND PATENT APPEALS—TRADE-MARK OPPOSITION—ISSUE.
Where appellant's motion to amend the notice of opposition raised the question that appellee was not entitled, ex parte, to registration of his mark because of confusing similarity insofar as the additional registrations set forth in the amendment were concerned, and the tribunals below ruled that appellant here was not entitled to be heard on the issue that the registration of appellee's mark should have been denied ex parte, *Held* that the issue of whether the applicant's mark should have been rejected ex parte over the opposer's registered marks is not before us on this appeal.

3. TRADE-MARKS—CONFUSION—"SOLVEX" AND "ZINDEX."
Held that as between "Solvex" and "Zindex," both applied to preparations for athlete's foot, those marks are easily distinguished, as they neither look nor sound alike, and that an intended purchaser would not confuse the names.

APPEAL from the Patent Office. Opposition No. 23,548.

AFFIRMED.

Stephen J. Cox (*Stephen G. Cox* of counsel) for The Scholl Mfg. Co., Inc.

No appearance for Irving Simon, Etc.

JOHNSON, *J.*:

This is an appeal from the decision of the Commissioner of Patents affirming the decision of the Examiner of Interferences dismissing appellant's notice of opposition to appellee's application for registration of the notation "Zindex" as applied to a foot preparation for athlete's foot, and holding that appellee was entitled to register the mark under section 5 of the Trade-Mark Act of February 20, 1905.

It is alleged in appellee's application for registration that appellee has used its mark on its goods since November 30, 1943.

In its notice of opposition, appellant alleges that it is the owner of the trade-mark "Solvex"; that it has used its mark on its goods since March, 1930, and that it would be damaged by the registration of the mark "Zindex" to appellee; that it would interfere with the rights vested in appellant; that it is deceptively and confusingly similar to appellant's mark and would cause deception and confusion of the trade and purchasing public; that it would enable the appellee to trade on and reap the benefits of the good will and reputation of appellant, and allow appellee and his dealers to pass off its goods as those of appellant and reap the harvest and benefit of appellant's costly and extensive advertising and other selling efforts; that appellee's product is an article substantially identical with appellant's said product and is of the same descriptive properties and in the same class.

Appellant also contends that the use by appellee on his labels of the words "Aid-Oil Drugs" adds to the confusing similarity which he alleges exists between the marks in issue due to appellant's use of the trade-mark "Ease-All," registered in Class 44, and that such use by appellee will cause deception to those purchasers who look at the maker's name.

Evidence was introduced by each of the parties.

In his decision, the Commissioner held, as did the Examiner of Interferences, that "when the marks are considered in their entireties, as they must be, they are so generally dissimilar that confusion in trade would not be likely to occur."

The Commissioner also held that "The two marks neither look alike, sound alike, nor have any similarity in meaning." We concur in those findings.

[1] During the taking of its testimony (depositions), the appellant introduced three additional registrations of marks which it claims to be somewhat more similar to appellee's mark than "Solvex," and gave notice that it would move to amend the notice of opposition "at or before the hearing under Rule 15(*b*) of the Federal Rules of Civil Procedure." Thereafter appellant did move to amend the notice of opposition to conform the pleadings to the proof under Rule 15(*b*) of the Federal Rules of Civil Procedure. The Examiner of Interferences denied the motion to amend, refused to consider other marks than the one originally pleaded, and excluded all evidence concerning the other marks. That ruling was affirmed by the Commissioner.

Rule 15(*b*) of the Federal Rules of Civil Procedure, 28 U. S. C. A. foll. sec. 723*c*, reads in part as follows:

Rule 15. Amended and Supplemental Pleadings

* * * * * * *

(*b*) *Amendments to Conform to the Evidence.* When issues not raised by the pleadings are tried by express or implied consent of the parties, they shall be treated in all respects as if they had been raised in the pleadings. Such amendment of the pleadings as may be necessary to cause them to conform to the evidence and to raise these issues may be made upon motion of any party at any time, even after judgment; but failure so to amend does not affect the result of the trial of these issues. * * *

Appellant contends that because appellee did not object to testimony taken by appellant regarding the marks "Zino-Pads," "Zin-Ox Pads," and "Zino," or to the notice of amendment until it came to the taking of appellant's rebuttal testimony, more than six months later; and that because appellee took testimony and introduced exhibits in answer to the testimony of appellant with respect to the marks "Zin-Ox Pads," "Zino-Pads," and "Zino." "The 'issues not raised by the pleadings' as originally filed were, therefore, 'tried by express or implied consent';" and that "Any objections which might have been made were, therefore, waived by appellee."

We do not agree with that contention. The taking of testimony and the introduction of exhibits during the taking of the testimony did not constitute a trial of the issues. The issues were tried before the Examiner of Interferences at final hearing. At the final hearing, appellee expressly objected to the proposed amendments and to the evidence relating thereto. The Examiner properly sustained those objections. Section 6 of the Trade-Mark Act of February 20, 1905, as amended, providing that "Any person who believes he would be damaged by the registration of a mark may oppose the same by filing notice of opposition, stating the grounds therefor, in the Patent Office within thirty days after the publication of the mark sought to be registered," precludes any amendment setting up new grounds of opposition if filed more than thirty days after publication of the mark sought to be registered. *Hannis Distilling Co.* v. *George W. Torrey Co.*, 32 App. D. C. 530, 141 O. G. 569. There a motion asking leave to amend the notice of opposition was filed after the thirty days allowed by statute had expired, and in affirming the decision of the Examiner and Commissioner denying the motion, the Court of Appeals of the District of Columbia, which then had jurisdiction in appeals in opposition proceedings, held: "We think the Examiner of Interferences properly denied the motion upon the following statement: 'If the amendment does not contain matter constituting new grounds of opposition, no advantage can result to the opponent from its admission, and the amendment should be denied; if it does set out new grounds of opposition, it is brought too late, and cannot be allowed.'"

The Hannis Distilling Co. case, supra, is conclusive on the point of bringing an amendment after the statutory limit has passed.

[2] Because appellant's motions to amend were denied by the Examiner, he also refused to give further consideration to the question of confusing similarity insofar as the notations "Zino," "Zin-Ox Pads," and "Zino-Pads" were concerned. Appellant, in his appeal to the Commissioner, assigned as error the refusal of the Examiner to consider those marks and determine without reference to the precise issues raised by the pleadings that applicant was not entitled, ex parte, to registration of his mark. The Commissioner held that opposer was not entitled to be heard on evidence in support of grounds not specifically pleaded, citing *Goldsmith Brothers* v. *Atlas Supply Co.*, 32 CCPA (Patents) 1001, 148 F.2d 1016, 65 USPQ 378, 577 O. G. 312. In that case, appellee-applicant's mark "Coldex" was held not to be confusingly similar to appellant-opposer's mark "Goldex." Appellee-applicant sought registration of "Coldex" as applied to an automobile antifreeze compound, whereas appellant-opposer's mark "Goldex" had been registered for use on chemicals, medicines, and pharmaceutical preparations, and toilet preparations. The opposer introduced evidence of the use of his mark "Goldex" on a can of motor oil and a can of polishing wax, and urged that in the natural extension of its business (that of a mercantile establishment operating a store with a drug department and a department for automobile accessories) it should be able to apply its mark to an antifreeze preparation of its own. One of the registrations introduced in evidence by opposer there concerned the use of its mark in the sale of pure glycerin and rubbing alcohol, but this court rejected opposer's contention that its glycerin and alcohol were goods of the same descriptive properties as applicant's antifreeze, holding that opposer's registration was restricted in scope to pharmaceuticals. The court then held that the extension of the opposer's mark from pharmaceuticals into antifreeze would be an extension into an unrelated field, citing *Pratt & Lambert, Inc.* v. *Chapman & Rodgers, Inc.*, 30 CCPA (Patents) 1228, 136 F.2d 909, 58 USPQ 474, 556 O. G. 720, where this court held that a liberal interpretation of the "merchandise of the same descriptive properties" language of section 5 of the Trade-Mark Act of February 20, 1905, would not permit a holding that paints and varnishes, etc. possess the same descriptive properties as insecticides and medicinal preparations. In the Goldsmith case, supra, this court held, as quoted by the Commissioner in justification of his position that appellant here was not entitled to be heard on the issue that the registration of appellee's mark should have been denied ex parte, that

* * *. Since appellant did not plead the use of its mark on motor oil or its registration for polishing wax that might be used on automobiles, the evidence with respect thereto cannot be deemed pertinent to the issue and the Examiner of Interferences and Commissioner of Patents properly refused to consider it. * * *. If appellant intended to rely upon its registered mark as applied to polishing wax it should have pleaded it the same as it did others.

The Commissioner stated in his opinion that although he considered appellant not entitled to be heard on the issue, he had given careful consideration of appellant's contention that the opposed application should be refused registration ex parte.

The issue of whether the applicant's mark should have been rejected ex parte over the opposer's registered marks "Zino," "Zin-Ox Pads," and "Zino-Pads" is not before us on this appeal.

As between "Solvex" and "Zindex," both applied to preparations for athlete's foot, those marks are easily distinguished, as they neither look nor sound alike. Appellant argues, through his witness in the record, and before us in his brief, that the trade does not buy his products by the manufacturer's name, "Dr. Scholl's," but by the trade-mark under which the product is advertised and sold. It fol-

lows then that an intended purchaser of an athlete's foot preparation would not become so confused in asking for "Solvex" that he would say "Zindex" or any name similar in sound; nor if "Zindex" were offered to him by a clerk, through error or otherwise, would a purchaser intending to buy "Solvex" be persuaded that "Zindex" is so similar in appearance and sound that he must have confused the names.

The pertinent portion of section 5 of the Trade-Mark Act of February 20, 1905, reads:

That no mark by which the goods of the owner of the mark may be distinguished from other goods of the same class shall be refused registration as a trade-mark on account of the nature of such mark • • •

• • • • • • • • •

(b) • • • Provided, That trade-marks • • • which so nearly resemble a registered or known trade-mark owned and in use by another and appropriated to merchandise of the same descriptive properties as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers shall not be registered: • • •

The essential elements of the proviso are: (1) trade-marks which so nearly resemble a known trade-mark; (2) used on merchandise of the same descriptive properties; (3) as to be likely to cause confusion in the mind of a purchaser or the public generally. All three elements must be present before bringing the proviso into operation in a particular case.

Finally, with regard to appellant's contentions respecting applicant's use of "Aid-Oil" on its "Zindex" label, and appellant's trade-mark "Ease-All," it is sufficient to point out that the record discloses that "Ease-All" is the trade-mark for an orthopedic device and does not appear on the label of any of the appellant's products here in issue. The similarity thought to exist by appellant between "Aid-Oil" and "Ease-All" as elements tending to cause confusion in trade, for that reason merits no further consideration.

The decision of the Commissioner of Patents dismissing the opposition is affirmed.

AFFIRMED.

HATFIELD, *J.*, dissents.

NOTICES

Attorney Representing Different Parties in Interference

In carrying out the provisions of Rule 208, Examiners, when forwarding interference notices and statements to the Examiners of Interferences, will call their attention to cases in which two of the parties are represented by the same attorney, in lieu of calling the matter directly to the attention of the Commissioner. The Examiner of Interferences when mailing out the notices to the parties and their attorney will advise the parties and the attorney that the attorney will not be recognized further as representing either party in the interference or in the interfering cases unless he shows that he is entitled to continue to represent either or both parties as provided by Rule 208. The Examiner of Interferences will also call to the attention of the parties and the attorney the requirement of the second sentence of Rule 201(c).

LAWRENCE C. KINGSLAND,
April 14, 1949. *Commissioner of Patents.*

Erratum

In the notice of republication under section 12(c) of the Trade-Mark Act of 1946, of Registration No. 257,074, appearing in the OFFICIAL GAZETTE of Mar. 1, 1949, page 118, for "Registered May 28, 1939" read *Registered May 28, 1929.*

Adjudicated Patents

(D. C. Okla.) Fletcher Patent No. 1,856,627, for a cutter for earth boring drills, *Held* valid. *Hughes Tool Co.* v. *Williams*, 82 F. Supp. 408; 80 USPQ 423.

(D. C. Okla.) Scott et al. Patent No. 1,983,316, for a three-cone bit, *Held* valid. *Hughes Tool Co.* v. *Williams*, 82 F. Supp. 408; 80 USPQ 423.

Cancellation Notice

R. Evelyn Poole, her assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Rare Chemicals, Inc., First and Essex Sts. Harrison, N. J., to effect the cancellation of trade-mark registration of R. Evelyn Poole, 1227 Trenton St., Los Angeles, Calif., No. 336,921, dated July 21, 1936, and the notice of such proceeding sent by registered mail to the said R. Evelyn Poole at the said address having been returned by the post office undeliverable, notice is hereby given that unless said R. Evelyn Poole, her assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
April 1, 1949. *Assistant Commissioner of Patents.*

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,416,352. CARGO HANDLING DEVICE. Patented Feb. 25, 1947. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A cargo-handling boom which may be adjusted to various angular positions on overhead tracks to reach into any adjacent corner of a ship's hold to load and unload cargo. Several trolley carriages are mounted at spaced points on L-shaped overhead tracks. Each of the carriages has a downwardly extending boom which carries a trolley hoist. Each of the trolleys is swiveled in such a manner as to permit each of the carriages to travel independently of the others. (Owner) Edgar C. Seward, 702 South Arlington Mill Drive, Arlington, Va. Group 35—31. Reg. No. 19,417.

Pat. 2,447,542. MATERIAL HANDLING PALLET. Patented Aug. 24, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Nestable pallet or skid for use in the cargo loading operations of ships is stamped of sheet metal to provide spaced parallel corrugations which act as supporting ribs and downwardly converging sides. The ribs support a raised platform so that the forks of a lift truck may be inserted between the ribs of the pallet. Transverse inverted parallel channels are also provided on the underside of the pallet to receive the forks of a lift truck, enabling the pallet to be lifted by the truck in any direction of approach. (Owner) Edgar C. Seward, 702 South Arlington Mill Drive, Arlington, Va. Group 35—31. Reg. No. 19,418.

Pat. 2,451,983. FLUID ACTUATED PISTON DISTRIBUTING VALVE WITH FLUID ACTUATED PISTON PILOT VALVE FOR EXPANSIBLE CHAMBER MOTORS. Patented Oct. 19, 1948. Casing of this hydraulic reversing valve is bored to receive a pair of reciprocating pistons. Fluid is directed independently through either of two elongated slots in one of the pistons and through the recesses on the surface of the other piston. Ports in each of the bores are alternately communicable with the slots and recesses of the pistons during reciprocation. Several passages in the casing connect opposite ends of each of the bores with one another and also lead to the inlets and outlets of the casing. By reason of its construction damage is reduced to a minimum in that once a predetermined pressure is reached the valve automatically reverses and continues in operation. The valve is adaptable for operating shaker screens, shapers, presses, washing machines, etc. (Co-owner) Edgar C. Seward, 702 South Arlington Mill Drive, Arlington, Va. Group 35—69. Reg. No. 19,419.

Pat. 2,457,506. SAFETY PROD. Patented Dec. 28, 1948. Pencil type safety prod for testing radio or other closely wired circuits is provided with a plastic insulating sleeve which is normally slidably retained within the barrel. The sleeve may be slid by the fingers to extended position so that only a small fraction of the tip of the prod is exposed. This eliminates the danger of damaging the circuits or test meter with which the prod is being used. A flat spring retains the sleeve in retracted or adjusted position. (Owner) Steffen H. Sorensen, 508 East 78th St., New York 21, N. Y. Groups 36—13; 39—81. Reg. No. 19,420.

Pat. 2,455,563. TYPEWRITER CARRIAGE RETRACTOR DEVICE. Patented Dec. 7, 1948. An attachment for typewriters to retract the carriage and operate the spacing lever is attached to side of keyboard frame. A lever extends below the frame parallel with keyboard. A knob at end of lever rests between two of the keys. The other portion of lever extends upwardly above the spacing lever and forms a shaft. A spool mounted on the shaft rests against a standard on the shifting lever as the carriage travels across the machine. When a typed line is completed, typist presses the knob, whereupon the spool will push against the standard and retract the carriage and roll. At the same time the spacing lever revolves the paper one space. Modifications given in patent. (Owner) Silas R. Dague, 1357 South Broadway, Wichita, Kans. Group 35—72. Reg. No. 10,421.

Pat. 2,387,087. TRUCK SELF-LOADER ATTACHMENT. Patented Oct. 23, 1945. Truck is backed for attachment into a frame having parallel triangular sides. Frame carries a rake, shovel, or toothed scoop at its rear end, and at its front end has a detachable pivotal latching connection with the truck. Truck is backed to fill shovel, and rear end of frame is then raised by lifting means powered by a take-off from truck motor and is pivoted upward to dump load into truck. Lifting means consists of a universally connected power take-off with a shaft leading to a drive pinion at front of truck, and a beveled gear on a rotatable drum. Drum, pivotally mounted at front of truck, has a cable leading upward to a cross piece fastened to uprights of frame. A lever controls the power-take-off, and a connection to the brake lever of truck controls movement of frame. (Owners) Joseph Egg and Stanley Smith, Bend, Oreg. Groups 35—31; 38—11. Reg. No. 19,422.

Pat. 2,453,943. TRUCK LOADING MEANS. Patented Nov. 16, 1948. A frame is pivotally mounted on a truck to swing in a vertical plane. A scoop at rear of frame has a series of teeth with a removable cover for the teeth so it may be used as a fork or as a scoop. Spaced pins on either side of scoop limit the movement of a pivotally attached handle. The handle is fastened to a cable attached to a drum at front of truck. (See Pat. 2,387,087, Reg. No. 19,422.) The scoop end of the frame is elevated as the cable is wound on the drum. A spring latch on one of the diagonal main frame members engages a pin at side of scoop and limits normal tilting of scoop. As the frame is raised, the latch is released and the scoop is raised above the truck. An auxiliary U-shaped scoop-positioning frame on rollers is hinged to the main frame and contacts the ground when the device is lowered. (Owners) Joseph Egg and Stanley Smith, Bend, Oreg. Groups 35—31; 38—11. Reg. No. 19,423.

Pat. 2,317,936. APPARATUS FOR CUTTING OR FLAME-MACHINING METAL. Patented Apr. 27, 1943. This patent provides apparatus whereby the time required for starting thermochemical metal removing and cutting operations is substantially reduced. A fusible metal rod is directed into a pre-heating flame and a jet of oxygen in such a manner that, upon melting, a molten globule will be blown

toward and deposited upon the surface of the work at the starting point. Several modified forms of apparatus are shown. (Owner) The Linde Air Products Company, 30 East 42nd St., New York 17, N. Y. Group 35—42—43. Reg. No. 19,424.

Pat. 2,451,422. THERMOCHEMICAL REMOVAL OF METAL WITH A FLUX-FORMING POWDER IN THE OXYGEN CUTTING STREAM. Patented Oct. 12, 1948. This patent relates to methods and apparatus whereby metal may be thermochemically removed from metal bodies or alloys of the type which resist or are substantially immune to progressive oxidation by conventional thermochemical metal-removing procedure where only a pre-heating flame and a jet of oxygen are used. The metal is removed by steadily advancing a pre-heating flame and an oxygen jet progressively and concurrently against successive areas of such immune body, while concurrently and continuously introducing a stream of finely divided combustible adjuvant material into the zone of action so as to oxidize constituents of the metal body and produce reaction products sufficiently fluid to be expelled by the oxygen jet. The adjuvant material may be brought into the zone of action in close association with the oxygen jet in any suitable manner, either inside a blowpipe nozzle or just outside the nozzle as the jet emerges. Various methods, numerous kinds of adjuvant materials, and modified forms of blowpipe nozzles are set forth for carrying out various operations, such as cutting, de-seaming, de-surfacing, etc. (Owner) The Linde Air Products Company, 30 East 42nd St., New York 17, N. Y. Group 35—42—43. Reg. No. 19,425.

Pat. 2,222,397. STABILIZING SUSPENSION SYSTEM FOR MOTOR-DRIVEN VEHICLES. Patented Nov. 19, 1940. This patent shows resilient shackle means interposed between a chassis frame and the axles, or between the axles and a body which has been reinforced in such manner as to dispense with the usual chassis frame. Each shackle means consists of a transverse shackle link having its outer end pivotally connected to an upwardly curved arm of axle housing, and its inner end pivotally connected to a depending lug of chassis frame. A downwardly extending eye-bolt is pivoted to the center of the shackle link with lower end of bolt slidably retained in an opening in a horizontal bracket of axle housing. Helical springs surround the bolt above and below the bracket to resist up and down movements of bolt and shackle link relative to axle. If desired, double shackle means may be employed, depending upon load to be carried, etc. (Owner) Amel Ben Brolueka, 2208 Fairview Ave., Detroit 14, Mich. Group 38—11—31—41. Reg. No. 19,426.

The following ten patents relate to the use of waste farm products and to the promotion of plant growth through preparation and improvement of soil. (Owner) Albert C. Fischer, 6051 West 65th St., Chicago 38, Ill.

Pat. 2,243,857. FIBER ARTICLES, SUCH AS MATS AND THE LIKE. Patented June 3, 1941. Straw, corn stalks, and other waste farm products are compacted into mats which may be used for many purposes such as protective covering for hotbeds, bedding for animals and poultry, wall insulation, and a moisture-preserving overlay for freshly poured concrete. In fabricating the mats, fiber is compacted between spaced walls of the forming machine to thoroughly interlace the fibers. The sheets are made cohesive by the addition of clay, adhesive binding, or by stitching, depending upon the intended purpose. They may also be coated with fertilizer, insecticide, lime, etc. Groups 22—62; 25—91; 28—33—72. Reg. No. 19,427.

Pat. 2,446,644. METHOD AND APPARATUS FOR COMPACTING FIBROUS MATERIAL. Patented Aug. 10, 1948. Reg. No. 19,428.

Pat. 2,257,738. COMPACTING APPARATUS AND METHOD. Patented Oct. 7, 1941. Reg. No. 19,429.

These two patents provide apparatus for making fiber mats covered by Pat. 2,243,857 (Reg. No. 19,427). Basically, the apparatus is a combination of compacting, sewing, adhesive applying, and drying machines. Straw and clay, or a similar mixture, is fed into a hopper formed by two wide conveyer belts to a channel having a cross section of the desired product being formed. The channel includes a reciprocating plunger, the front end of which has a number of pegs, which nest or interlace the fibrous mixture. Several rows of parallel stitches are simultaneously sewed into the interlaced material, which is then kneaded; an adhesive, fertilizer, insecticide, etc., are applied by spray guns; and the whole is finally passed through a steam-heated dryer. Groups 25—91; 28—33—72; 35—59.

Pat. 2,281,927. SEED TAPE. Patented MAY 5, 1942. To insure planting seeds at their proper depth, seeds are secured to a tape with a water-soluble colloidal material. The tapes are perforated at equal distances and the seed supported in the perforation by a gelatin film. In planting, the tape is embedded edgewise so that the top is even with surface of soil. Group 28—33—72—94. Reg. No. 19,430.

Pat. 2,313,057. SEED PLANTING, SEED INOCULATION, AND FERTILIZER. Patented MAR. 9, 1943. Seed is nourished during successive stages of its growth by coating the seed with a moisture-soluble colloidal material such as agar-agar, gelatin, etc. The coating also contains small amounts of growth-facilitating substances such as fertilizer and mulch, and an insecticide if necessary, all of which are embedded within a colloidal shell. Modifications are shown. Group 28—33—72—94. Reg. No. 19,431.

Pat. 2,314,928. PROMOTING RESTORATION OF TRANSPLANTED PLANTS. Patented MAR. 30, 1943. Non-drying colloids are applied as thin, jelly-like protecting jackets to the roots of shrubs, trees, vines, etc., being transplanted. The colloids are hygroscopic, absorbing moisture from the air or soil, thus preventing the drying out of plant roots so that plants are quickly reestablished in their new location without harmful effects. As a further aid, coatings of insecticides, repellents, and fertilizers may also be applied. Group 28—33—72—94. Reg. No. 19,432.

Pat. 2,315,949. FERTILIZING BY CARTRIDGES. Patented APR. 6, 1943. Paper or similar sheet material covered with a fertilizer or any other desired soil-treating media is rolled into a self-sustaining cartridge. The diameter of the cartridge depends upon the number of turns in the roll. The cartridge fits the hole snugly to maintain good capillary contact between the roll, soil, and roots of the plant. Groups 26—69; 28—33—72—94. Reg. No. 19,433.

Pat. 2,338,103. GELATINIZED SEED BEARING CORD. Patented Jan. 4, 1944. Seeds are embedded at intervals in a moisture gathering colloidal material deposited as a jacket on cord which acts as a carrier. The seeds are fed by means of the colloidal jacket, which may incorporate a plant food. Preferably, however, the plant food is added as a further coating along with an insecticide or parasite repellent. Group 28—33—72. Reg. No. 19,434.

Pat. 2,351,256. METHOD OF FERTILIZER DISTRIBUTION. Patented June 13, 1944. The growth of plants may be improved by preparing the seed bed as follows: The bed is dug to any desired depth, clay is laid at the bottom, and a sheet incorporating plant food, etc., is laid midway so that it divides the seed bed into an upper growing layer of soil and a lower moisture retaining layer. Plants are then set out in the upper layer so that their roots are in the vicinity of the fertilizing sheet. Group 28—33—72. Reg. No. 19,435.

Pat. 2,446,509. PLANT COVER. Patented Aug. 3, 1948. Translucent porous cap, bag, envelope, or other type of cover for small fruit bushes and other plants for use during certain periods of growth. The cover may be coated on the inside with a parasiticide, fertiliser, moisture supplying substance, etc., to rid the plant of insects and fungi, or to assist pollinization, ripening of fruit, etc. Groups 26—82; 28—33—72. Reg. No. 19,436.

Pat. 2,450,469. RADIUS TOOL. Patented Oct. 5, 1948. Tool and holder for use in lathes, shapers, planers, or other machine tools cuts radii of different sizes. Rectangular shaft, mounted in post of machine tool, has a transversely extending cylindrical bearing arranged so that opposite ends are at different levels of the shank. A cutting bit may be set in various positions by a hand lever mounted in a transverse opening of the shaft. The shaft is reversible in one of the bearings to locate the cutting bit at different levels with respect to the shank. The hand lever is used to turn the shaft in the bearing to swing the free end of the bit in an arc during the cutting operation. (Owner) Anthony E. DeMartin, 22 New Haven Ave., Derby, Conn. Group 35—41. Reg. No. 19,437.

Pat. 2,455,213. TOWEL RACK. Patented Nov. 30, 1948. A vertically adjustable towel rack, slidable in a supporting bracket, provides easy access for hanging and removing towels and is raised out of reach when not in use. Any number of pivoted towel-supporting arms may be secured to the top of a vertical rod. A bracket, formed of sheet metal, has upper and lower right-angled ends containing slot openings through which the rod is raised or lowered by turning a bent handle at lower end of rod. When rod is in lowered position, the supporting arms rest on bracket. When raised, the handle passess through lower slot and is supported in fingers at end of bracket. (Owner) Thomas W. Bell, Apt. 5, 1424 Chapin St., N. W., Washington, D. C. Groups 25—11—99; 34—95; 39—81. Reg. No. 19,438.

Pat. 2,454,393. MILES-PER-GALLON METER. Patented Nov. 23, 1948. Dash-mounted indicator is adapted to any type of vehicle. Basically, the indicator utilizes a pair of individually movable cams, one of which is actuated in accordance with the power output of the engine or by the speed of the crank shaft or axle. The other is moved in accordance with the rate of fuel flow. The motion of the cams is integrated to indicate a ratio by a pointer structurally related to the cams and moving in response to the movement of both cams. The cams are preferably associated with bi-metallic actuators operated by heating coils under the control of a fluid flow meter and a speedometer. (Owner) Charles A. Leonard, 509 Larkhill Court, Webster Groves 19, Mo. Group 38—31. Reg. No. 19,439.

Pat. 2,454,659. ELECTRICALLY CONTROLLED GOVERNOR. Patented Nov. 23, 1948. Control system connected with butterfly valve of an engine intake manifold. The valve is opened or closed by an electrically actuated link to shorten or lengthen the valve rod in accordance with impulse from the control system. Connected to the link is a bi-metal strip having a thermal switch and a movable contact which engages one or more stationary contacts. Heating of the strip is through a pulsating current obtained from a transformer whose secondary is connected to the heating unit of the strip and whose primary is connected to a battery of the vehicle through a rotating commutator. Rotation of the commutator and heating of the strip are dependent on the speed of the vehicle engine to close the valve when engine speed is too great or to open the valve when speed is too low. (Owner) Charles A. Leonard, 509 Larkhill Court, Webster Groves 19, Mo. Group 38—31. Reg. No. 19,440.

Pat. 2,449,762. CHANCE SPINNER DEVICE. Patented Sept. 21, 1948. Board depicting a baseball diamond has sockets on field and around its edges to receive pegs to indicate players, strikes, hits, outs, etc. An upright U-shaped frame mounted at rear end of board has a top horizontal shaft on which the hubs of four vertical rods are rotatably mounted. Balls of different color are slidably retained on the rods on opposite sides of the hubs by fixed balls on opposite ends of rods. An inverted U-shaped rocker swingably mounted within the lower end of the frame is connected to a cord. To play game, cord is pulled toward player to pivot rocker in front of the rods and tension a spring. When cord is released, rocker strikes the fixed balls on lower ends of the rods, causing rods to spin freely. When spinning ceases, the rods stop vertically aligned. Player then notes color of the slidable balls above the hubs, consults a tally chart, and places a pin (or pins) in appropriate socket. Various types of rockers are shown. (Owner) John H. Biehl, 1017 Belmont Ave., Collingswood, N. J. Group 39—41. Reg. No. 19,441.

Pat. 2,456,873. DISPENSER FOR TOOTH POWDER AND THE LIKE. Patented Dec. 21, 1948. A container for powdered materials which will dispense a measured quantity of the powder onto a brush. The container has a hopper for the powder and a measuring chamber at lower end controlled by slidable closure plates. Rods attached to the plates pass through the container wall and are attached to an actuating lever. The upper plate is normally held open by a coiled spring, and powder from the hopper fills the measuring chamber. By moving the lever the upper plate is closed and the lower plate opened to dispense powder. Yokes carried by the plates project upwardly and scrape the hopper and measuring chamber walls as the device operates. (Owner) Richard W. Hopkins, 251 River St., Troy, N. Y. Groups 33—31; 39—81; 40. Reg. No. 19,442.

Pat. 2,456,852. POWER-OPERATED FENCE POST DRIVER. Patented Dec. 21, 1948. A fence postdriving apparatus to be mounted on the rear of a motor-driven vehicle. An arm with a cup-shaped end is pivoted to one side of a supporting frame. The arm is lowered by a pulley connected to a winch supported by the frame. The winch is driven by a power-take-off of the vehicle to engage and drive the posts as the vehicle is moved along a fence. A spring-operated pulley, also attached to the arm and to the frame, raises the arm following completition of each stroke. (Owner) C. N. Anderson, 1601 East Central Ave., Northwood, Iowa. Group 35—22. Reg. No. 19,443.

Pat. 2,088,981. INTERNAL COMBUSTION ENGINE. Patented July 13, 1937. An overhead valve type internal combustion engine has a piston constructiou stated to increase efficiency and insure high compression of the fuel charge. A semi-circular projection, with a beveled face, on the piston rides into the combustion chamber close to the intake valve. The gases are highly compressed and agitation created in the combustion chamber under the exhaust valve and spark plug. The projection is at right angles to a wrist pin and crankshaft, and the piston will not tilt on the pin when the charge is fired. When the plug fires, explosion of the charge is insured. (Owner) Harry Klug, 3154 North 44th St., Milwaukee, Wis. Groups 35—19; 37—22; 38—31. Reg. No. 19,444.

Pat. 2,282,076. WHIRLING SOUND DRUM TOY. Patented May 5, 1942. A drum-shaped toy produces a magnified sound effect when whirled by a strand about a whirling handle. Drum is hollowed out in a conical series of cylinders intersected by shoulders (like steps) forming sound

chambers. A perforated fiber piece seals bottom head of drum. A vibratory disk secured to shoulder of lowest step forms a sound chamber to emit sound impulses. A double strand fastened to vibratory disk extends up through a vent aperture in top of uppermost cylinder and is looped around grooved end of whirling handle. When toy is whirled, sound impulses are carried through series of sound chambers and emitted through aperture at top. (Co-owner) Edmund J. Moddes, 7800 26th Ave., Kenosha, Wis. Group 39—41. Reg. No. 19,445.

Pat. 2,454,721. POULTRY FEEDER. Patented Nov. 23, 1948. A poultry feeder convertible for indoor or outdoor use has a bin with a fixed end, side walls, and feeding troughs. When adjusted for outdoor use, a panel hinged to each side wall slopes downward and acts as wide overhanging eave to protect the feed troughs. When used indoors, the panel can be shifted to an upright extended position beyond the upper edge of the wall. Surplus feed may be stored in this upward extension. The bin is mounted on vertically adjustable skids to suit the changing heights of growing birds. (Owners) Vernon Severance and Charles L. Severance, Akron, Mich. Groups 25—99; 34—41. Reg. No. 19,446.

Notice

Pat. 2,155,295. (Reg. No. 19,260). After April 18, 1949, all correspondence in reference to the granting of licenses under this patent should be directed to Bartow Beacons, Inc., Wings Field, Montgomery County, Blue Bell, Pa.

Correction

E. R. Squibb & Sons, of New York, N. Y., being desirous that the following invention shall be freely and unrestrictedly available to the public, hereby dedicates and assigns said patent to the people of the United States, without recompense. "The consideration for this dedication and assignment is such benefit as the public may derive."

Pat. 2,461,278. STANDARDIZATION OF THERAPEUTIC CURARE PREPARATIONS. Patented Feb. 8, 1949. A method of producing stable curare preparations for therapeutic use. Potency of various aqueous solutions is determined by intravenously injecting laboratory animals with test or standard samples to produce temporary paralysis of the skeletal muscles. On the successive day those animals injected with the test sample are injected with the standard sample, and vice versa. Preparations of the desired activity are then made in accordance with results. Group 28—31.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 3, 1949

[VOL. 622. NO. 1]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 509,127. AMERICAN LATEX PRODUCTS CORPORATION, Los Angeles, Calif. Filed Sept. 16, 1946.

MOLTEX

FOR FOAM RUBBER MATERIAL, IN SHEET AND BLOCK FORM FOR USE IN THE MANUFACTURE OF VARIOUS ARTICLES OF MERCHANDISE.

Claims use since February 1946.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 516,036. ERNST ROSE, San Francisco, Calif. Filed Jan. 20, 1947.

SHOWERETTES

FOR SCENTED AND TINTED SOAP PELLETS.

Claims use since Jan. 8, 1947.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 520,403. JEAN-PASCAL LORRIAUX & CIE., Paris, Seine, France. Filed Apr. 9, 1947.

The name "Pascal" and the sur-name "Lorriaux" are disclaimed apart from the mark.

FOR PERFUMES.

Claims use since Jan. 17, 1942.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 525,240. B. PEARLMAN & COMPANY LIMITED, London, England. Filed June 30, 1947.

POLO

The applicant is owner of Reg. No. 421,182, issued May 21, 1946.

FOR PYROPHORIC CIGAR AND CIGARETTE LIGHTERS AND PARTS THEREOF.

Claims use since Oct. 12, 1932.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 505,537. UNIT STRUCTURES, INC., Peshtigo, Wis. Filed July 12, 1946.

FOR LAMINATED WOOD ARCHES FOR BUILDING CONSTRUCTION AND PREFABRICATED HOUSES MADE OF WOOD.

Claims use since January 1942.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 517,716. Morris L. Fruman, Detroit, Mich. Filed Feb. 18, 1947.

Emesco

FOR HANDLE PINS AND CLIPS FOR TRUNK AND DOOR HANDLES; DOOR AND TRUNK HANDLE FERRULES; SCREWS; NUTS; AND BOLTS MADE OF BASE METAL.
Claims use since January 1940.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 511,054. Samuel F. Woodhouse Company, Philadelphia, Pa. Filed Oct. 17, 1946. Under 10-year proviso.

Woodhouse

FOR INTERIOR AND EXTERIOR PAINTS, VARNISHES, AND PAINT ENAMELS.
Claims use since 1876.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 523,017. Electro Engineering & Mfg. Co., Detroit, Mich. Filed May 26, 1947.

MAGNA-TELE

FOR COMBINED INDUCTIVE PICKUP, CRADLE SUPPORT, AMPLIFIER AND SOUND REPRODUCING UNIT CONSTITUTING A STAND CONFORMING IN CONTOUR AND SIZE WITH THE BASE OF A CRADLE TYPE HAND TELEPHONE SET, TELEPHONE, AND ADAPTED TO BE INSERTED BENEATH THE BASE OF THE CRADLE TYPE TELEPHONE AND TO SUPPORT IN THE CRADLE SUPPORT THEREOF THE HAND TELEPHONE SET IN REVERSE POSITION WHILE THE INDUCTIVE PICKUP ESTABLISHES MAGNETIC COUPLING WITH THE TELEPHONE CIRCUIT FOR ENABLING THE UNIT TO PICK UP, AMPLIFY AND REPRODUCE TELEPHONE SIGNALS THROUGH THE SOUND REPRODUCING UNIT WHILE THE HAND TELEPHONE SET SUPPORTED IN REVERSE POSITION IN THE CRADLE SUPPORT OF SAID UNIT FUNCTIONS IN NORMAL MANNER.
Claims use since Apr. 5, 1947.

Okatea Red

The word "Red" is disclaimed.
FOR LIPSTICKS.
Claims use since July 20, 1948.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 546,472. ALFRED DUNHILL OF LONDON, INC., New York, N. Y. Filed Jan. 8, 1948.

Nugget

FOR PYROPHORIC LIGHTERS FOR CIGARS, CIGARETTES, AND SMOKING PIPES.
Claims use since July 28, 1947.

Ser. No. 546,473. ALFRED DUNHILL OF LONDON, INC., New York, N. Y. Filed Jan. 8, 1948.

Nugget Gold

The word "Gold" is disclaimed apart from the mark.
FOR PYROPHORIC LIGHTERS FOR CIGARS, CIGARETTES, AND SMOKING PIPES.
Claims use since July 28, 1947.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 527,897. OLIN INDUSTRIES, INC., East Alton, Ill. Filed July 5, 1947. Under section 2f of the act of 1946.

Applicant claims ownership of Registrations Nos. 268,456, 142,347, and 149,543.
FOR RIFLE CARTRIDGES.
Claims use since Jan. 1, 1908.

Ser. No. 543,907. E. I. DU PONT DE NEMOURS AND COMPANY, Wilmington, Del. Filed Dec. 19, 1947.

NITRAMEX

FOR BLASTING AGENT PACKED IN METAL CONTAINERS FOR USE IN QUARRYING, STRIPPING, AND GENERAL BLASTING.
Claims use since Oct. 27, 1947.

Ser. No. 549,399. HERCULES POWDER COMPANY, Wilmington, Del. Filed Nov. 26, 1947. Under section 2f of the act of 1946.

TAMPTITE

Applicant claims ownership of Registration No. 422,333.
FOR DYNAMITE IN CARTRIDGE FORM FOR USE IN EXPLOSIVE OPERATIONS.
Claims use since Aug. 15, 1941.

Ser. No. 550,418. THE JOHNSON COMPANY, Marshfield, Wis. Filed Feb. 24, 1948.

ARABUCK

FOR GUN CASES.
Claims use since Oct. 10, 1945.

Ser. No. 553,290. L. W. LOYD COMPANY, INC., South Pittsburg, Tenn. Filed Mar. 29, 1948.

ATOMIC

The word portion of the drawing is "Atomic."
FOR FIRECRACKERS.
Claims use since Sept. 3, 1947.

CLASS 10

FERTILIZERS

Ser. No. 530,474. THE DAVISON CHEMICAL CORPORATION, Baltimore, Md. Filed Aug. 5, 1947. Under section 2f of the act of 1946.

DAVCO
HOPKINS
FERTILIZER

The word "Fertilizer" is disclaimed apart from the mark. Applicant claims ownership of Registrations Nos. 278,757, 351,125, and 351,126.
FOR FERTILIZERS.
Claims use since 1905.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 500,728. AMERICAN CRUCIBLE COMPANY, North Haven, Conn. Filed Sept. 20, 1947; originally filed, act of 1905, Apr. 23, 1946.

STARRSIL

FOR REFRACTORIES—NAMELY, SLABS, BATS, POSTS, RAILS, AND FITTINGS WHICH IN USE ARE SUBJECTED TO HIGH TEMPERATURES AND WHICH MAY FORM OR BE INCORPORATED IN OR USED IN CONNECTION WITH HEATING CHAMBERS AND FURNACES, AND WHICH ARE CLAY BONDED AND CONTAIN AS AN ESSENTIAL INGREDIENT SILICON CARBIDE.
Claims use since Feb. 25, 1946.

Ser. No. 524,990. GEORGE W. HOFFMANN CORPORATION, New York, N. Y. Filed Aug. 8, 1947; originally filed, act of 1905, June 27, 1947.

HOFFCRETE

FOR WATER-PROOFING ADHESIVE MASONRY MORTAR AND WATER-PROOFING MASONRY CRACK FILLER.
Claims use since Mar. 1, 1947.

Ser. No. 534,736. THE BOSTWICK STEEL LATH COMPANY, Niles, Ohio. Filed Sept. 17, 1947. Under section 2f of the act of 1946.

CHANNEL-FORM

FOR METAL FLOOR LATH.
Claims use since January 1930.

Ser. No. 537,561. THE CELOTEX CORPORATION, Chicago, Ill. Filed Oct. 11, 1947.

CEMESTO

Applicant claims ownership of Registration No. 292,160.
FOR CONSTRUCTION ELEMENTS OF COMPOSITE STRUCTURE HAVING BOARD FORM COMPRISING A FIBROUS INSULATING CORE HAVING ADHERED CEMENTITIOUS FACINGS AND USED IN BUILDINGS FOR EXTERIOR FINISH, PARTITIONS, AND THE LIKE, AND IN THE INDUSTRIAL FIELD FOR THE CONSTRUCTION OF DRYING OVENS, VENTILATING DUCTS, MACHINE HOODS, AND THE LIKE.
Claims use since Aug. 22, 1931.

Ser. No. 546,223. JOHNS-MANVILLE CORPORATION, New York, N. Y. Filed Jan. 5, 1948. Under section 2f of the act of 1946.

AERTITE

Applicant claims ownership of Registration No. 222,712.
FOR TOUGH RUBBERY COATING COMPOSITIONS FOR PREVENTING THE INFILTRATION OF AIR THROUGH BOILER SETTINGS AND AS A WATERPROOF FOR INSULATION.
Claims use since 1916.

Ser. No. 547,714. THE EAGLE-PICHER COMPANY, Cincinnati, Ohio. Filed Jan. 22, 1948.

DE-85

FOR INSULATION MATERIAL OF A DIATOMACEOUS EARTH BASE IN BLOCK FORM, USED FOR INSULATING BOILERS, HEATED TANKS, AND SIMILAR INDUSTRIAL HEATED EQUIPMENT.
Claims use since Dec. 17, 1947.

Ser. No. 552,286. TAMMS SILICA COMPANY, Chicago, Ill. Filed Mar. 18, 1948.

AGRASEAL

FOR WATERPROOF COATING FOR CONCRETE SURFACES.
Claims use since February 1947.

Ser. No. 552,727. ALLIED CHEMICAL & DYE CORPORATION, New York, N. Y. Filed Mar. 23, 1948. Under section 2f of the act of 1946.

MULTI-SHINGLES

Applicant claims ownership of Registration No. 151,375 (expired).
FOR COMPOSITION SHINGLES.
Claims use since February 1917.

Ser. No. 555,880. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa. Filed Oct. 23, 1947.

BEECH CREEK

FOR STANDARD REFRACTORY BRICK.
Claims use since June 1901.

Ser. No. 555,881. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa. Filed Oct. 23, 1947.

MAGNEHARTH

FOR GRANULAR MAGNESITE RAMMING MIX FOR FURNACES.
Claims use since June 1943.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 504,350. GENERAL MILLS, INC., Minneapolis, Minn., and Wilmington, Del. Filed Jan. 5, 1948; originally filed, act of 1905, June 21, 1946.

General Mills

FOR SAUCEPANS MADE OF BASE METAL.
Claims use since Jan. 23, 1946.

Ser. No. 548,556. AIRD-DON COMPANY, Troy, N. Y. Filed Feb. 2, 1948.

Trojan

Applicant claims ownership of Registration No. 231,580.
FOR BASIN COCKS, BATH COCKS, BIBS, SOLDERING NIPPLES, LAVATORIES, BATHTUBS, TOILETS, FAUCETS, AND TRAPS.
Claims use since Jan. 1, 1892.

Ser. No. 548,705. AMITY NOTION CO., INC., New York, N. Y. Filed Feb. 4, 1948.

AMITY

FOR SEPARABLE SLIDE FASTENERS, COMMONLY CALLED ZIPPER FASTENERS.
Claims use since Oct. 1, 1945.

Ser. No. 549,026. STERILSEAT CORPORATION, Wilmington, Del. Filed Feb. 6, 1948. Under section 2f of the act of 1946.

STERILSEAT

Applicant claims ownership of Registration No. 378,681.
FOR TOILET SEATS.
Claims use since November 1938.

Ser. No. 552,359. CONTINENTAL STEEL CORPORATION, Kokomo, Ind. Filed Dec. 22, 1947.

CONTINENTAL

Applicant claims ownership of Registrations Nos. 266,862 and 285,909.
FOR WIRE FENCING, INCLUDING FARM FENCE, POULTRY FENCE, INDUSTRIAL FENCE, AND ORNAMENTAL FENCE MADE OF WIRE AND IRON, AND GATES THEREFOR OF THE SAME MATERIALS, AND BARBED WIRE AND NAILS.
Claims use since Mar. 16, 1931.

Ser. No. 569,134. FORD MOTOR COMPANY, Dearborn, Mich. Filed Nov. 20, 1948.

Fomoco

FOR BOLTS, SCREWS, NUTS, LOCK NUTS, METAL WASHERS, LOCK WASHERS, HINGES, COTTER PINS, COCKS, DRAIN PLUGS, EXPANSION PLUGS, RIVETS, METAL PIPE, PIPE FITTINGS, HOSE CLAMPS, WIRE AND CONDUIT HOLDING CLIPS, SCREW STUDS, COIL SPRINGS, AND FLUID CONTROLLING VALVES.
Claims use since Nov. 17, 1948.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 512,321. CHICAGO STEEL FOUNDRY COMPANY, Chicago, Ill. Filed Nov. 10, 1948; originally filed, act of 1905, Nov. 9, 1946. Under section 2f of the act of 1946.

EVANSTEEL

FOR STEEL CASTINGS.
Claims use since July 1924.

Ser. No. 547,197. VANADIUM-ALLOYS STEEL COMPANY, Latrobe, Pa. Filed Jan. 15, 1948.

8-N-2

FOR TOOL STEEL IN THE FORM OF BILLETS, BARS, SHEETS AND PLATES FOR USE IN FABRICATING INTO SUCH ARTICLES AS CIRCULAR SAWS, DRILLS, REAMERS, BROACHES, END MILLS, PUNCHES AND THE LIKE; AND DISC AND RING FORGINGS FORGED ON A STEAM HAMMER, DROP HAMMER OR PRESS FROM ROLLED OR PREFORGED STOCK, FOR USE IN FABRICATING INTO MILLING CUTTERS, HOBS, BLANKING DIES, DRAWING DIES AND THE LIKE.
Claims use since Aug. 1, 1944.

Ser. No. 547,812. AMERICAN STEEL FOUNDRIES, Chicago, Ill. Filed Jan. 23, 1948.

Applicant claims ownership of Registrations Nos. 137,535, 148,347, 148,982, and 156,612.
FOR FERROUS METAL CASTINGS AND FORGINGS.
Claims use since Jan. 1, 1903.

Ser. No. 551,342. VANADIUM-ALLOYS STEEL COMPANY, Latrobe, Pa. Filed Mar. 5, 1948. Under section 2f of the act of 1946.

No. 7

FOR STEEL BARS, SHEETS, AND PLATES.
Claims use since Mar. 14, 1907.

Ser. No. 553,239. ARCOS CORPORATION, Philadelphia, Pa. Filed Mar. 29, 1948. Under section 2f of the act of 1946.

CHROMEND

FOR CONSUMABLE METAL WELDING ELECTRODES.
Claims use since Feb. 23, 1930.

Ser. No. 553,243. ARCOS CORPORATION, Philadelphia, Pa. Filed Mar. 29, 1948. Under section 2f of the act of 1946.

CHROMEND HC

FOR CONSUMABLE METAL WELDING ELECTRODES.
Claims use since Nov. 1, 1933.

Ser. No. 553,244. ARCOS CORPORATION, Philadelphia, Pa. Filed Mar. 29, 1948. Under section 2f of the act of 1946.

CHROMEND HCN

FOR CONSUMABLE METAL WELDING ELECTRODES.
Claims use since Mar. 1, 1932.

Ser. No. 553,249. ARCOS CORPORATION, Philadelphia, Pa. Filed Mar. 29, 1948.

STAINLEND HC

FOR CONSUMABLE METAL WELDING ELECTRODES.
Claims use since Jan. 3, 1939.

Ser. No. 553,250. ARCOS CORPORATION, Philadelphia, Pa. Filed Mar. 29, 1948.

STAINLEND HCN

FOR CONSUMABLE METAL WELDING ELECTRODES.
Claims use since Jan. 1, 1944.

Ser. No. 553,252. ARCOS CORPORATION, Philadelphia, Pa. Filed Mar. 29, 1948. Under section 2f of the act of 1946.

BRONZEND

FOR CONSUMABLE METAL WELDING ELECTRODES.
Claims use since Oct. 15, 1936.

Ser. No. 553,254. ARCOS CORPORATION, Philadelphia, Pa. Filed Mar. 29, 1948. Under section 2f of the act of 1946.

NICKELEND

FOR CONSUMABLE METAL WELDING ELECTRODES.
Claims use since Mar. 1, 1932.

CLASS 15

OILS AND GREASES

Ser. No. 541,033. SOCONY-VACUUM OIL COMPANY, INCORPORATED, New York, N. Y. Filed Nov. 13, 1947.

CUPROL

FOR CUTTING OILS FOR METAL PROCESSING.
Claims use since June 5, 1947.

Ser. No. 549,094. SYNTRON COMPANY, Homer City, Pa. Filed Feb. 7, 1948.

SYNTRON

Applicant claims ownership of Registrations Nos. 415,309 and 419,108.
FOR LUBRICATING OILS AND GREASES.
Claims use since 1937.

Ser. No. 550,457. STANDARD OIL COMPANY OF CALIFORNIA, Wilmington, Del., and San Francisco, Calif. Filed Feb. 24, 1948.

RPM DELO

Applicant claims ownership of Registrations Nos. 379,100, 337,073, 434,882, 332,257, 338,718, 338,719, 419,368, 419,192, and 436,046.
FOR LUBRICATING OILS AND DIESEL ENGINE LUBRICATING OIL.
Claims use since June 12, 1945.

Ser. No. 551,255. EASTERN STATES FARMERS' EXCHANGE, West Springfield, Mass. Filed Mar. 5, 1948. Under section 2f of the act of 1946.

EASTERN STATES

Applicant claims ownership of Registrations Nos. 177,370, 184,503, 185,714, 187,373, 317,158, 320,294, 326,035, 326,037, 330,285, and 347,726.
FOR LUBRICATING OILS AND GREASES.
Claims use since June 10, 1935.

Ser. No. 551,262. EASTERN STATES FARMERS' EXCHANGE, West Springfield, Mass. Filed Mar. 5, 1948. Under section 2f of the act of 1946.

EASTERN STATES

Applicant claims ownership of Registrations Nos. 177,379, 184,503, 185,714, 187,373, 317,159, 320,294, 326,035, 326,037, 330,285, and 347,726.
FOR LUBRICATING OILS AND GREASES.
Claims use since June 10, 1935.

Ser. No. 551,343. C. C. WAKEFIELD & COMPANY LIMITED, London, England. Filed Mar. 5, 1948.

CASTROLEASE

Applicant claims ownership of British Registration No. 642,041, dated Nov. 20, 1945.
FOR OILS AND GREASES FOR LUBRICATING, HEATING, AND LIGHTING.

Ser. No. 551,345. C. C. WAKEFIELD & COMPANY LIMITED, London, England. Filed Mar. 5, 1948.

SPHEEROL

Applicant claims ownership of British Registration No. 510,323, dated Feb. 12, 1930.
FOR LUBRICATING OILS AND LUBRICATING GREASES.

Ser. No. 551,347. C. C. WAKEFIELD & COMPANY LIMITED, London, England. Filed Mar. 5, 1948.

CASTROLITE

Applicant claims ownership of English Registration No. 583,049, dated Jan. 26, 1938.
FOR OILS FOR HEATING, LIGHTING AND LUBRICATING.

Ser. No. 552,512. STANCO INCORPORATED, Wilmington, Del., and New York, N. Y., assignor to Esso Standard Oil Company, Wilmington, Del., a corporation of Delaware. Filed Mar. 19, 1948.

ACTO

Applicant claims ownership of Registrations Nos. 221,646, 221,885, 251,298, 251,487, 273,653, 296,241, and 299,746.
FOR REFINED, SEMI-REFINED, AND UNREFINED OILS AND GREASES MADE FROM PETROLEUM BOTH WITH AND WITHOUT ADMIXTURE OF SUBSTANCES FOR ILLUMINATING, BURNING, POWER, FUEL, AND LUBRICATING PURPOSES AND LUBRICATING GREASES, AND PETROLEUM SULFONATES FOR GENERAL USE IN THE INDUSTRIAL ARTS, INCLUDING USE AS, OR AS AN INGREDIENT IN, EMULSIFIERS FOR SOLUBLE CUTTING OILS, DRAWING COMPOUNDS, TEXTILE OILS, EMULSION BREAKING COMPOUNDS, HIGH TEMPERATURE BEARING LUBRICANTS, MOTOR OILS, AND COMPONENTS OF LUBRICANTS FOR METAL WORKING.
Claims use on petroleum derivatives since Oct. 19, 1918; and on petroleum sulfonates since Oct. 27, 1944.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 535,545. J. F. KURFEES PAINT COMPANY, Louisville, Ky. Filed Sept. 24, 1947. Under section 2f of the act of 1946.

80 AND 20 = 100%
LEAD ZINC PURE

The words "Lead," "Zinc," and "Pure" are disclaimed apart from the mark. Applicant claims ownership of Registrations Nos. 239,173 and 240,389.
FOR PREPARED OR READY-MIXED LIQUID PAINTS.
Claims use since July 1, 1926.

Ser. No. 535,546. J. F. KURFEES PAINT COMPANY, Louisville, Ky. Filed Sept. 24, 1947.

80 and 20

Applicant claims ownership of Registrations Nos. 240,389 and 239,175.
FOR PREPARED OR READY-MIXED LIQUID PAINTS.
Claims use since Sept. 1, 1925.

Ser. No. 537,917. MAAS & WALDSTEIN COMPANY, Newark, N. J. Filed Oct. 15, 1947.

NILUSTRE

FOR LACQUERS, AIR DRYING AND BAKING ENAMELS AND VARNISHES.
Claims use since February 1937.

Ser. No. 539,323. INTERNATIONAL PAINT COMPANY, INC., New York, N. Y. Filed Oct. 28, 1947. Under section 2f of the act of 1946.

NOSKID

Applicant claims ownership of Registration No. 385,909.
FOR READY-MIXED PAINTS.
Claims use since Feb. 6, 1939.

SPHERON

FOR CARBON BLACK FOR USE IN THE MANUFACTURE OF PAINTS.
Claims use since Aug. 5, 1939.

Ser. No. 540,371. BLUE RIBBON PAINT COMPANY, Wheeling, W. Va. Filed Nov. 7, 1947. Under section 2f of the act of 1946.

B-R
BEST RESULT
QUICK DRY
ENAMEL

The words "Quick Dry Enamel" are disclaimed apart from the mark.
FOR PAINT ENAMELS.
Claims use since Feb. 1, 1932.

Ser. No. 540,372. BLUE RIBBON PAINT COMPANY, Wheeling, W. Va. Filed Nov. 7, 1947.

Hydol

Applicant claims ownership of Registration No. 284,205.
FOR INTERIOR PAINTS IN PASTE AND LIQUID FORM AND WALL SURFACE SEALERS.
Claims use since Dec. 1, 1930.

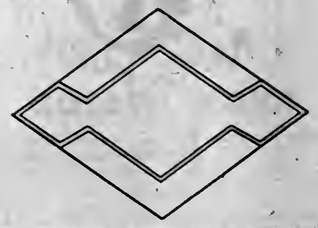
Ser. No. 540,881. REPUBLIC PAINT & VARNISH CO., Chicago, Ill. Filed Nov. 12, 1947.

BARONIAL

FOR PAINT ENAMEL SOLD IN LIQUID FORM, FLAT WALL FINISH PAINT WHICH MAY ALSO BE USED AS A SEALER OR UNDERCOAT, AND VARNISH.
Claims use since Nov. 8, 1940.

Ser. No. 542,196. O-CEDAR CORP'N., Chicago, Ill. Filed July 24, 1947. Under section 2f of the act of 1946.

O-Cedar



Applicant claims ownership of Registrations Nos. 99,142, 189,252, and 179,862.
FOR POLISHES AND WAXES FOR POLISHING FURNITURE, WALLS, FLOORS, AND AUTOMOBILES.
Claims use since June 1, 1907.

Ser. No. 542,661. ROGERS PAINT PRODUCTS, INC., Detroit, Mich. Filed Nov. 28, 1947.

Detro-Tone

No claim is made to the word "Tone" apart from the mark as shown. Applicant claims ownership of Registration No. 215,989.
FOR PAINTS IN PASTE AND READY MIXED FORM.
Claims use since Mar. 1, 1946.

Ser. No. 545,591. MOORE-HANDLEY HARDWARE CO., INC., Birmingham, Ala. Filed Dec. 27, 1947.

FOR ALUMINUM PAINT, COLORS IN OIL FOR COLORING PAINTS, BARN PAINTS, VARNISHES, TURPENTINE, FOR PAINTS AND ENAMELS, LINSEED OILS FOR PAINTS, PAINTING ENAMELS, CREOSOTE OIL PAINTS, CREOSOTE STAINS, VARNISH STAINS, OIL STAINS, AND READY MIXED PAINTS.
Claims use since 1937.

Ser. No. 546,672. DETROIT GRAPHITE COMPANY, Detroit, Mich. Filed Jan. 10, 1948. Under section 2f of the act of 1946.

Bond-Gard Primer

No claim is made to the exclusive use of the word "Primer" apart from the mark shown.
FOR PAINT PRIMERS.
Claims use since 1937.

Ser. No. 548,039. WM. WREN LIMITED, Bushey, Watford, England. Filed Jan. 26, 1948.

Lavendo

Applicant claims ownership of British Registration No. 491,462, dated Aug. 15, 1928.
FOR POLISHING PREPARATIONS—I. E., FURNITURE POLISHES.

Ser. No. 549,019. EDWARD SMITH & CO., INC., New York, N. Y. Filed Feb. 6, 1948.

BX 127

FOR MARINE SPAR VARNISH.
Claims use since 1930.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 525,444. TAYLOR BROTHERS, INC., Winston-Salem, N. C. Filed Feb. 25, 1948; originally filed, act of 1905, July 1, 1947.

The words "Ram's Horn" are lined for red. The representation of the ram's head is lined for shading only. The representation of the metal tag is disclaimed.
FOR PLUG, TWIST, AND SMOKING TOBACCO.
Claims use since Jan. 1, 1900.

Applicant claims ownership of Registration No. 240,956.
FOR PLUG, TWIST, AND SMOKING TOBACCO.
Claims use since Jan. 1, 1900.

Ser. No. 540,782. CUBAN CIGAR COMPANY, Denver, Colo. Filed Nov. 12, 1947.

DRY CLIMATE

FOR CIGARS.
Claims use since May 1, 1897.

Ser. No. 550,878. UNITED STATES TOBACCO COMPANY, Flemington, N. J., and New York, N. Y. Filed Feb. 28, 1948.

Old Briar

FOR SMOKING TOBACCO.
Claims use since Dec. 10, 1926.

CLASS 19

VEHICLES

Ser. No. 569,142. FORD MOTOR COMPANY, Dearborn, Mich. Filed Nov. 20, 1948.

FoMoCo

FOR AUTOMOBILES, TRUCKS, BUSSES, VEHICLE PARTS AND ACCESSORIES—NAMELY, VEHICLE COIL SPRINGS, VEHICLE LEAF SPRINGS, SPRING SHACKLES, SPRING CLIPS, SPRING CLAMPS, RADIATORS, VEHICLE BRACKETS AND SUPPORTS, TIRE CARRIERS, BATTERY CARRIERS, STABILIZERS, WHEELS, HUBS, DRUMS, HUB CAPS, WHEEL TRIM RINGS, HOODS, FENDERS, BODIES, CHASSIS, FRAMES, BUMPER GUARDS, BUMPERS, SHOCK ABSORBERS, SHOCK ABSORBER LINKS, WINDSHIELDS, SUN VISORS, REAR VIEW MIRRORS, FENDER SHIELD, WINDSHIELD WIPERS, STEERING WHEELS, WINDSHIELD WIPER BLADES, WINDSHIELD WASHERS, CLUTCH PEDALS, BRAKE PEDALS, BRAKE SHOES, VEHICLE FUEL TANKS, VEHICLE HEATERS, VEHICLE DEFROSTERS, VEHICLE VENTILATORS, BUILT-IN CUSHIONED SEATS AND SEAT BACKS, SEAT COVERS, FLOOR MATS, GLASS CUT TO SHAPE FOR VEHICLE WINDOWS.
Claims use since Nov. 17, 1948.

CLASS 20

LINOLEUM AND OILED CLOTH

Ser. No. 556,425. DELAWARE FLOOR PRODUCTS INC., Wilmington, Del. Filed May 7, 1948.

Wall-Ever

The word "Wall" is disclaimed.
FOR FELT BASE, PLASTIC SURFACED, WALL COVERINGS.
Claims use since Mar. 10, 1948.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 522,647. THE READY-POWER CO., Detroit, Mich. Filed Dec. 1, 1947; originally filed, act of 1905, May 19, 1947. Under section 2f of the act of 1946.

READY-POWER

The word "Power" is disclaimed as a trade-mark except when associated with the word "Ready" to form the trade-mark "Ready-Power."
FOR INTERNAL COMBUSTION ENGINE DRIVEN GENERATOR SETS FOR OPERATION OF ELECTRICAL INDUSTRIAL TRUCKS, COMPRISING IN EACH CASE AN INTERNAL COMBUSTION ENGINE, A GENERATOR, VARIOUS CONTROL AND INDICATING EQUIPMENT; AND INTERNAL COMBUSTION ENGINE DRIVEN GENERATOR SETS FOR GENERAL POWER PURPOSES, COMPRISING IN EACH CASE AN INTERNAL COMBUSTION ENGINE, A GENERATOR, VARIOUS CONTROL AND INDICATING EQUIPMENT.
Claims use since Jan. 5, 1924, on sets for industrial trucks; and since Aug. 2, 1935, on sets for general power purposes.

Ser. No. 523,321. MOTOROLA, INC., Chicago, Ill. Filed Sept. 9, 1947; originally filed, act of 1905, May 31, 1947.

Golden View

The word "View" is disclaimed apart from the mark.
FOR TELEVISION RECEIVERS.
Claims use since May 19, 1947.

Ser. No. 523,322. MOTOROLA, INC., Chicago, Ill. Filed Sept. 19, 1947; originally filed, act of 1905, May 31, 1947.

GOLDEN VOICE

The word "Voice" is disclaimed apart from the mark.
FOR RADIO RECEIVERS.
Claims use since Nov. 1, 1935.

Ser. No. 526,695. WALTER KIDDE & COMPANY, INC., Belleville, N. J. Filed July 5, 1947.

Kidde

Applicant claims ownership of Registration No. 334,376.
FOR FLAME ACTUATED ELECTRIC APPARATUS FOR CLOSING OF FIRE ALARM CIRCUITS; FIRE DETECTING APPARATUS COMPRISING ELECTRICALLY ACTUATED ALARM AND INDICATING APPARATUS TO INDICATE THE PRESENCE AND LOCATION OF FIRE UPON THE ACTUATION OF A HEAT RESPONSIVE MECHANISM INCLUDED IN THE ELECTRICAL SYSTEM; ELECTRICALLY OPERATED FIRE ALARM APPARATUS; AND IMPACT SWITCHES FOR ELECTRIC CIRCUITS.
Claims use since Aug. 15, 1942.

Ser. No. 527,912. REYNOLDS ELECTRIC CO., Chicago, Ill. Filed July 5, 1947. Under section 2f of the act of 1946.

REYNOLDS ELECTRIC COMPANY

The words "Electric Company" are disclaimed apart from the mark as shown.
FOR PARTS FOR ELECTRIC ADVERTISING SIGNS OF THE GASEOUS GLOW TYPE CONSISTING OF FLASHER UNITS, TIMERS, I. E., SEQUENCE SWITCHES FOR MAKING AND BREAKING CONTACTS IN SEQUENCE; PARTS FOR ELECTRICALLY CONTROLLED INTERMITTENT SIGNAL-LIGHT SYSTEMS AND EQUIPMENT FOR STREET AND RAILWAY TRAFFIC CONSISTING OF FLASHER UNITS, TIMERS, I. E., SEQUENCE SWITCHES FOR MAKING AND BREAKING CONTACTS IN SEQUENCE; ELECTRIC FANS; ELECTRIC MOTORS; ELECTRICAL FLASHERS, AND FLASHER CONTROLS FOR MECHANICAL OPERATIONS.
Claims use since May 15, 1901.

Ser. No. 529,644. ARCIBO HERMANOS, Buenos Aires, Argentina. Filed July 26, 1947.

APOLIS

Applicant claims ownership of Argentina Registration No. 190,807.
FOR ELECTRICAL MOTORS, ELECTRIC FANS, DYNAMOS, TRANSMITTING TELEVISION SETS, ELECTRIC CLOTH CUTTING MACHINES.
Claims use since Sept. 10, 1940.

Ser. No. 532,760. SPERRY GYROSCOPE COMPANY, INC., Great Neck, N. Y., now by merger The Sperry Corporation, a corporation of Delaware. Filed Aug. 28, 1947. Under section 2f of the act of 1946.

SPERRY

FOR ELECTRONIC APPARATUS—NAMELY, MICROWAVE TRANSMISSION LINES, MICROWAVE FIXED AND FLEXIBLE COAXIAL LINES AND WAVE GUIDES, MATCHING TRANSFORMERS, COUPLERS, PHASE SHIFTERS, LINE TERMINATIONS, ATTENUATORS, DIRECTIONAL COUPLERS, CRYSTAL DETECTORS, TRANSMISSION LINE BRIDGES AND MULTIPLIERS, ROTATING JOINTS AND ANTENNAS.
Claims use since April 1941.

Ser. No. 536,136. RESEARCH MANUFACTURING COMPANY, Savannah, Ga. Filed Sept. 29, 1947.

FLUSH-O-MATIC

The word "Flush" is disclaimed apart from the mark as shown.
FOR SOLENOID SWITCH MECHANISMS FOR AUTOMATICALLY OPERATING TOILET FLUSH VALVES.
Claims use since Sept. 2, 1946.

Ser. No. 541,479. TRANSPARENT PRODUCTS CORP., Los Angeles, Calif. Filed Nov. 17, 1947.

CO-MO-LITE

The word "Lite" is disclaimed.
FOR ELECTRICALLY OPERATED COMBINATION DISPLAY SIGNS AND CASES.
Claims use since Aug. 15, 1947.

Ser. No. 543,459. THE JEFFREY MANUFACTURING COMPANY, Columbus, Ohio. Filed Dec. 5, 1947. Under section 2f of the act of 1946.

JEFFREY

FOR ELECTRIC MOTOR CONTROLLERS FOR CONTROLLING THE STARTING, STOPPING AND REVERSING OF ELECTRIC MOTORS, AND PARTS THEREOF, ELECTRIC MOTORS AND ARMATURES AND PARTS THEREOF, ELECTRIC TROLLEYS AND PARTS THEREOF, ELECTRIC TROLLEY HARPS, ELECTRIC TROLLEY WHEELS, ELECTRIC REELS FOR REELING UP AND REELING OUT ELECTRICAL CABLES FOR CONDUCTING CURRENT TO PORTABLE VEHICLES AND THE LIKE, AND ELECTRIC COILS.
Claims use since Sept. 8, 1933.

Ser. No. 543,812. THE HARTFORD PRODUCTS CORPORATION, Hartford, Conn. Filed Dec. 9, 1947.

TORRID

FOR PORTABLE ELECTRIC APPLIANCES—NAMELY, ELECTRIC FLAT IRONS.
Claims use since Nov. 5, 1947.

Ser. No. 545,337. THE BAUSH DEVELOPMENT COMPANY, Cleveland, Ohio. Filed Dec. 24, 1947.

MAGNETONE

FOR MAGNETIC SOUND RECORDING AND REPRODUCING APPARATUS.
Claims use since Oct. 7, 1947.

Ser. No. 548,979. METAL SPECIALTY PRODUCTS COMPANY, Rochester, N. Y. Filed Feb. 6, 1948.

Cord-away

The word "Cord" is disclaimed.
FOR ELECTRIC IRON CORD SUPPORTS.
Claims use since Jan. 14, 1948.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 540,514. BRAINERD BAIT CO., St. Paul, Minn. Filed Nov. 8, 1947.

10,000 LAKES

FOR FISHING TACKLE—NAMELY, SPINNERS, SPOONS, PLUGS, HOOKS, LEADERS, FISHING LINE, AND FROG AND MINNOW HARNESS.
Claims use since Jan. 1, 1936.

Ser. No. 549,329. PARKER BROTHERS, INC., Salem, Mass. Filed Nov. 3, 1947.

CONTACK

Applicant claims ownership of Registration No. 373,575.
FOR GAME PLAYED WITH CHIPS.
Claims use since Nov. 10, 1938.

Ser. No. 551,963. EXHIBIT SUPPLY COMPANY, Chicago, Ill. Filed Mar. 15, 1948.

SAMBA

FOR COIN-CONTROLLED AMUSEMENT APPARATUS.
Claims use since Feb. 2, 1948.

Ser. No. 552,671. LAMKIN LEATHER COMPANY, Chicago, Ill. Filed Mar. 22, 1948.

VELTEX

FOR LEATHER STRIPS FOR GOLF CLUBS AND RACKET HANDLES.
Claims use since Feb. 15, 1948.

Ser. No. 553,649. STRATTON & TERSTEGGE COMPANY, Louisville, Ky. Filed Apr. 1, 1948. Under section 2f of the act of 1946.

FALLS CITY

Applicant claims ownership of Registration No. 237,607.
FOR MINNOW BUCKETS, TACKLE BOXES, AND BAIT BOXES.
Claims use since Jan. 1, 1914.

Ser. No. 553,651. STRATTON & TERSTEGGE COMPANY, Louisville, Ky. Filed Apr. 1, 1948.

AIR-BREATHER

FOR MINNOW BUCKETS.
Claims use since Dec. 12, 1932.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 503,531. ROCKWOOD SPRINKLER COMPANY OF MASSACHUSETTS, Worcester, Mass. Filed Dec. 22, 1947; originally filed, act of 1905, June 8, 1946. Under section 2f of the act of 1946.

ROCKWOOD WATERFOG

FOR FIRE EXTINGUISHING EQUIPMENT—NAMELY, SPRAY HEADS AND PROTECTIVE BLOW-OFF COVERS THEREFOR FOR FIXED FIRE EXTINGUISHING INSTALLATIONS, AND SPRAY HEADS, NOZZLES, AND APPLICATORS, THE LATTER CONSISTING OF A BENT PIPE WITH NOZZLE, WITH OR WITHOUT SHUT-OFF, FOR PORTABLE FIRE EXTINGUISHING EQUIPMENT.
Claims use since January 1941 on spray heads; and since September 1941 on nozzles, applicators, and protective blow-off covers.

Market Maker

FOR FRUIT AND VEGETABLE GRADING, CLEANING, AND PACKING MACHINES.
Claims use since Aug. 3, 1946.

Ser. No. 528,932. THE HUBER MANUFACTURING COMPANY, Marion, Ohio. Filed July 19, 1947. Under section 2f of the act of 1946.

The drawing is lined to indicate gold for the letters and maroon for the background.
FOR ROAD ROLLERS AND ROAD SCRAPERS.
Claims use since Oct. 1, 1931.

Ser. No. 530,469. FLEXIBLE ROAD JOINT MACHINE COMPANY, Warren, Ohio. Filed Aug. 5, 1947.

FLEX-PLANE

FOR ROAD MAKING MACHINES—NAMELY, CONCRETE SURFACE FINISHING MACHINES, MACHINES FOR INSTALLING JOINTS BETWEEN SECTIONS OF FRESHLY LAID HARD SURFACE CONCRETE PAVEMENTS, CONCRETE SURFACE FINISHING MACHINES, TRAFFIC LINE MARKER INSTALLING MACHINES, ROAD FORM TRAVELING BRIDGES, AND AUTOMATIC DOWEL AND TIE BAR INSTALLING MACHINES.
Claims use since 1928.

Ser. No. 530,911. BARBER-COLMAN COMPANY, Rockford, Ill. Filed Aug. 9, 1947.

Paraform

FOR MILLING CUTTERS.
Claims use since December 1942.

Ser. No. 532,066. STENOGRAPHIC MACHINES, INC., Chicago, Ill. Filed Aug. 21, 1947. Under section 2f of the act of 1946.

STENOGRAPH

FOR SHORTHAND MACHINES.
Claims use since Dec. 19, 1939.

Ser. No. 534,544. MINNEAPOLIS-MOLINE POWER IMPLEMENT COMPANY, Minneapolis, Minn., now by merger Minneapolis-Moline Company, Hopkins, Minn., a corporation of Minnesota. Filed Sept. 15, 1947.

UNIVERSAL

The drawing is lined to indicate the colors red and yellow, but no claim is made to coloring as an essential characteristic of the mark. Applicant claims ownership of Registration No. 118,684.
FOR TRACTORS.
Claims use since Oct. 6, 1914.

Ser. No. 534,635. JIFFY DOG CO., Pasadena, Calif. Filed Sept. 16, 1947.

JIFFY DOG

The drawing is lined to show the colors red and gold used in the mark. Applicant disclaims the word "Dog" apart from the mark.
FOR FRANKFURTER COOKING AND DISPENSING MACHINE.
Claims use since November 1946.

Ser. No. 535,936. THE CLEVELAND TWIST DRILL COMPANY, Cleveland, Ohio. Filed Sept. 27, 1947. Under section 2f of the act of 1946.

PEERLESS

Applicant claims ownership of Registration No. 144,106.
FOR METAL WORKING SMALL TOOLS—VIZ., HAND REAMERS, CHUCKING REAMERS, CORE REAMERS, STRAIGHT SHANK REAMERS, TAPER SHANK REAMERS, SHELL REAMERS, AND ADJUSTABLE REAMERS.
Claims use since Jan. 1, 1908.

Ser. No. 537,223. NATIONAL VULCANIZED FIBRE CO., Wilmington, Del. Filed Oct. 8, 1947.

Aqualite

FOR LAMINATED BUSHINGS FOR WATER LUBRICATION OF MARINE BEARINGS.
Claims use since Aug. 18, 1931.

Ser. No. 543,023. THE BREADY TRACTOR AND IMPLEMENT COMPANY, Solon, Ohio. Filed Sept. 15, 1947. Under section 2f of the act of 1946.

BREADY

Applicant claims ownership of Registration No. 426,878.
FOR POWER OPERATED TRACTORS AND TOOLS THEREFOR—NAMELY, PLOWS, DISCS, HARROWS, CULTIVATORS, MOWERS, LAWN MOWERS, SNOW PLOWS, FURROWERS, AND HILLERS.
Claims use since June 1919.

Ser. No. 543,191. THE IRWIN AUGER BIT COMPANY, Wilmington, Ohio. Filed Dec. 3, 1947.

BLUWIN

Applicant claims ownership of Registration No. 303,986.
FOR AUGER BITS FOR WOODWORKING USE.
Claims use since Dec. 1, 1932.

Ser. No. 543,192. THE IRWIN AUGER BIT COMPANY, Wilmington, Ohio. Filed Dec. 3, 1947. Under section 2f of the act of 1946.

IRWIN

Applicant claims ownership of Registrations Nos. 65,244, 101,741, 344,345, and 428,109.
FOR SCREW DRIVERS.
Claims use since Oct. 2, 1935.

Ser. No. 543,340. TRIPLE "E" PRODUCTS COMPANY, St. Louis, Mo. Filed Dec. 4, 1947.

Triple "E" Pointer

The word "Pointer" is disclaimed.
FOR PENCIL SHARPENERS.
Claims use since Aug. 18, 1947.

Ser. No. 543,351. THE BILLINGS & SPENCER COMPANY, Hartford, Conn. Filed Oct. 2, 1947. Under section 2f of the act of 1946.

BILLINGS

Applicant claims ownership of Registration No. 398,858.
FOR TOOLS AND FOR MACHINERY—NAMELY, ALL KINDS AND TYPES OF THE FOLLOWING GOODS: WRENCHES, WRENCH SETS, WRENCH SOCKETS AND CHAIN PIPE WRENCHES, TONGS, HAMMERS, HANDLES, PLIERS, PIPE VISES, PIPE CLAMPS, KNURLING TOOLS, SCREW DRIVERS, DRIFTS, DRILL SOCKETS, REAMER HOLDERS, RATCHET DRILLS, CHISELS, HAND PUNCHES, COTTER-PIN TOOLS, CUT-OFF TOOLS, LATHE DOGS, CLAMP DOGS, AUTOMATIC SCREW MACHINES, DROP HAMMERS, DIE SINKING MACHINES, MILLING MACHINES, TRIMMER DIE MILLERS, HOT TRIMMING PRESSES, TIMBER SCRIBES, AND HOT SAWS.
Claims use since Apr. 1, 1926.

Ser. No. 546,370. CONSOLIDATED MACHINE TOOL CORPORATION, Rochester, N. Y. Filed Jan. 7, 1948.

CURLATOR

FOR MACHINERY FOR TREATING PAPERMAKING PULP, FOR MACHINERY FOR DEWATERING PULP, AND FOR MACHINERY FOR RECLAIMING AND TREATING WASTE PAPER.
Claims use since Nov. 25, 1947.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 507,414. NEW YORK EYE PROTECTION CO. INC., Brooklyn, N. Y. Filed Jan. 19, 1948; originally filed, act of 1905, Aug. 14, 1946. Under section 2f of the act of 1946.

ALLSPORT

FOR LENSES FOR EYE PROTECTION.
Claims use since Aug. 25, 1927.

Ser. No. 510,715. MORRISON-ATLAS PRODUCTS, Chicago, Ill. Filed Jan. 7, 1948; originally filed, act of 1905, Oct. 11, 1946. Under section 2f of the act of 1946.

KOVER-ALL

FOR PHOTOGRAPHIC FILM SQUEEGEES.
Claims use since Sept. 7, 1939.

Ser. No. 531,442. HARVEY S. COVER, South Bend, Ind. Filed Aug. 15, 1947. Under section 2f of the act of 1946.

NOD AND SHAKE

FOR GOGGLES.
Claims use since Oct. 7, 1922.

Ser. No. 537,016. CRAFTSMAN LINE-UP TABLE CORPORATION, Waltham, Mass. Filed Oct. 7, 1947.

Craftsman

FOR PRECISION LINE-UP AND REGISTER TABLES OF THE TYPE DESIGNED ESPECIALLY FOR USE IN PRINTING AND ALLIED ARTS AND FOR COMPONENT PARTS OF SAID MACHINES.
Claims use since Apr. 8, 1932.

Ser. No. 541,710. SIMPLICITY PATTERN CO. INC., New York, N. Y. Filed Nov. 19, 1947. Under section 2f of the act of 1946.

Simplicity

Applicant claims ownership of Registrations Nos. 277,639 and 394,686.
FOR MEN'S, WOMEN'S AND CHILDREN'S GARMENT AND ACCESSORY PATTERNS, DOLL AND TOY PATTERNS, AND NEEDLECRAFT PATTERNS.

OZACLOTH

FOR LIGHT-SENSITIVE COPYING AND PHOTOGRAPHIC CLOTHS.
Claims use since June 6, 1946.

Ser. No. 558,293. GENERAL ANILINE & FILM CORPORATION, New York, N. Y. Filed June 2, 1948.

OZAJET

FOR LIGHT-SENSITIVE COPYING AND PHOTOGRAPHIC PAPERS.
Claims use since July 3, 1946.

Ser. No. 558,296. GENERAL ANILINE & FILM CORPORATION, New York, N. Y. Filed June 2, 1948.

OZAPLASTIC

FOR LIGHT-SENSITIVE OPAQUE PLASTIC-COATED COPYING AND PHOTOGRAPHIC PAPERS.
Claims use since Apr. 5, 1946.

Ser. No. 558,686. AMERICAN ZYLOPTIC CO., INC., New York, N. Y. Filed June 8, 1948.

GALLANT

FOR LENSES FOR EYEGLASSES, GOGGLES, AND SPECTACLES AND EYEGLASS, GOGGLE, AND SPECTACLE FRAMES AND PARTS THEREFOR OF METAL, SHELL, AND VARIOUS PLASTIC COMPOSITIONS.
Claims use since July 1947.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 521,197. THE LUX CLOCK MANUFACTURING COMPANY, Waterbury, Conn. Filed Apr. 29, 1948; originally filed, act of 1905, Apr. 23, 1947. Under section 2f of the act of 1946.

Claridge

FOR CLOCKS—NAMELY, BOUDOIR, DESK, MANTEL, AND ALARM CLOCKS AND PARTS OF CLOCKS.
Claims use since Feb. 1, 1936.

Ser. No. 557,780. THE SESSIONS CLOCK COMPANY, Forestville, Conn. Filed May 25, 1948.

CATNAPPER

FOR CLOCKS, CLOCK MOVEMENTS AND PARTS THEREOF.
Claims use since Sept. 1, 1947.

Ser. No. 560,460. FLEVO WATCH CORPORATION, INC., Whitestone, N. Y. Filed June 30, 1948.

FLEVO

FOR WATCHES.
Claims use since May 1948.

Ser. No. 560,632. THE LUX CLOCK MANUFACTURING COMPANY, Waterbury, Conn. Filed July 2, 1948. Under section 2f of the act of 1946.

MINUTE METER

Applicant claims ownership of Registrations Nos. 336,750 and 428,021.
FOR CLOCKS, CLOCK MOVEMENTS, CLOCK CONTROLLED AUTOMATIC TIMER MECHANISMS, CLOCK CONTROLLED MECHANISMS USED FOR TIMING COOKING OPERATIONS, AND OTHER SUCH TIMING DEVICES.
Claims use since July 1, 1924.

Ser. No. 561,501. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed July 15, 1948.

MALDEN

Applicant claims ownership of Registration No. 412,335.
FOR WATCHES.
Claims use since July 15, 1941.

Ser. No. 562,432. ABRAHAM & STRAUS, INC., Brooklyn, N. Y. Filed July 29, 1948. Under section 2f of the act of 1946.

Biltwell

Applicant claims ownership of Registration No. 306,822.
FOR ELECTRIC CLOCKS.
Claims use since March 1931.

Ser. No. 562,516. ZELIKOVSKY BROS. CO., INC., New York, N. Y. Filed July 29, 1948.

LEOBE

FOR WATCHES.
Claims use since June 1, 1948.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 559,677. BRAD'S JEWELERS, INC., Brooklyn, N. Y. Filed June 19, 1948.

BRAD

FOR FINGER RINGS.
Claims use since Apr. 28, 1948.

Ser. No. 560,832. NATIONAL SILVER COMPANY, New York, N. Y. Filed July 7, 1948.

BOLERO

FOR STERLING SILVER FLATWARE.
Claims use since May 6, 1948.

Ser. No. 560,833. NATIONAL SILVER COMPANY, New York, N. Y. Filed July 7, 1948.

GUARDSMAN

FOR STERLING SILVER FLATWARE.
Claims use since May 17, 1948.

Ser. No. 560,834. NATIONAL SILVER COMPANY, New York, N. Y. Filed July 7, 1948.

PARADE

FOR STERLING SILVER FLATWARE.
Claims use since May 12, 1948.

Ser. No. 561,268. SPEIDEL CORPORATION, Providence, R. I. Filed July 13, 1948.

FIESTA

FOR BRACELETS (NOT INCLUDING WATCHES).
Claims use since May 26, 1948.

Ser. No. 561,933. NATIONAL SILVER COMPANY, New York, N. Y. Filed July 22, 1948.

CLAIR DE LUNE

FOR STERLING SILVER FLATWARE.
Claims use since May 7, 1948.

Ser. No. 561,934. NATIONAL SILVER COMPANY, New York, N. Y. Filed July 22, 1948.

GRENADIER

FOR STERLING SILVER FLATWARE.
Claims use since June 4, 1948.

Ser. No. 561,935. NATIONAL SILVER COMPANY, New York, N. Y. Filed July 22, 1948.

ILLUSION

FOR STERLING SILVER FLATWARE.
Claims use since May 7, 1948.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Ser. No. 550,840. STIX, BAER & FULLER COMPANY, St. Louis, Mo. Filed Feb. 28, 1948.

Arline

Applicant claims ownership of Registrations Nos. 409,292, 409,891, and 410,040.
FOR POWDER PUFFS.
Claims use since Oct. 1, 1939.

Ser. No. 553,079. CLOVER FARM STORES CORPORATION, Cleveland, Ohio. Filed Mar. 26, 1948. Under section 2f of the act of 1946.

Mrs. Lane's

FOR BROOMS.
Claims use since Nov. 1, 1935.

Ser. No. 554,097. CLOVER FARM STORES CORPORATION, Cleveland, Ohio. Filed Apr. 8, 1948.

GLENDALE

FOR BROOMS.
Claims use since Feb. 1, 1900.

Ser. No. 554,919. PRO-PHY-LAC-TIC BRUSH COMPANY, Northampton, Mass. Filed Apr. 17, 1948.

CURVETTE

FOR HAIR BRUSHES.
Claims use since Jan. 23, 1948.

CLASS 31

FILTERS AND REFRIGERATORS

Ser. No. 511,602. LIMESTONE PRODUCTS CORPORATION OF AMERICA, Newton, N. J. Filed June 18, 1948; originally filed, act of 1905, Oct. 29, 1946.

CRESTITE

FOR GROUND OR PULVERIZED LIMESTONE FOR USE IN NEUTRALIZING ACID WASTES.
Claims use since Aug. 14, 1946.

Ser. No. 535,250. THE MCKAIN COMPANY, doing business under the name Home Softener Service, St. Paul, Minn. Filed Sept. 22, 1947. Under section 2f of the act of 1946.

HOME SOFTENER SERVICE

FOR ZEOLITE WATER SOFTENERS.
Claims use since Mar. 1, 1941.

Ser. No. 536,622. LIQUID CONDITIONING CORPORATION, Linden, N. J. Filed Oct. 3, 1947.

LIQUON

FOR LIQUID TREATING EQUIPMENT—NAMELY, EQUIPMENT FOR CLARIFYING TURBID LIQUIDS BY

COAGULATION AND FILTRATION THROUGH SAND, ANTHRACITE, OR DIATOMACEOUS EARTH, FOR REMOVING HARDNESS FROM WATER BY CHEMICAL PRECIPITATION OR ION EXCHANGE, FOR REMOVING DISSOLVED AND COLLOIDAL SUBSTANCES FROM WATER, SEWAGE, AND LIQUIDS IN GENERAL BY ION EXCHANGE, CHEMICAL PRECIPITATION, ADSORPTION, OR DEGASIFICATION.

Claims use since Aug. 15, 1946, as to the word "Liquon"; and since July 23, 1947, as shown.

Ser. No. 536,866. AMERICAN GAS ASSOCIATION, INC., New York, N. Y. Filed Oct. 6, 1947.

Applicant disclaims any right to exclusive appropriation of each of the words shown on the mark apart from the combination of the words or arrangement thereof as shown. The star in the drawing is lined to represent the color blue.

FOR GAS OPERATED REFRIGERATORS.

Claims use since 1929.

Ser. No. 545,383. MCQUAY, INC., Minneapolis, Minn. Filed Jan. 30, 1948.

ICY-FLO

No claim is made to the word "Icy" apart from the mark as shown.

FOR ELECTRICALLY REFRIGERATED ACCUMULATORS FOR THE STORAGE OF COOLING CAPACITY, OPERATING TO FREEZE, WHEN DORMANT, SOME OF THE WATER IN INTERMITTENTLY OPERATED CIRCULATORY WATER COOLING SYSTEMS OF APPARATUS FOR CONDITIONING THE AIR IN CHURCHES, HALLS, AND AUDITORIUMS, ASSEMBLY RODOMS OF LODGES, CLUBS, AND MORTUARIES, AND OTHER GATHERING PLACES WHEREIN HEAVY LOADS ON SUCH APPARATUS ARE ENCOUNTERED FOR PERIODS OF SHORT DURATION.

Claims use since Jan. 1, 1940.

Ser. No. 567,519. HODGES RESEARCH AND DEVELOPMENT COMPANY, Redwood City, Calif. Filed Oct. 23, 1948.

MEATMASTER

The word "Meat" shown in the drawing is disclaimed apart from the mark as shown.

FOR COMMERCIAL REFRIGERATION CABINET FOR ACCELERATING THE AGING OF MEAT.

Claims use since Aug. 16, 1948.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 530,424. NOBLITT-SPARKS INDUSTRIES, INC., Columbus, Ind. Filed Aug. 4, 1947. Under section 2f of the act of 1946.

ARVIN

FOR METAL CHAIRS AND DINETTE TABLES.

Claims use since Jan. 15, 1940.

Ser. No. 532,339. PROGRESS BEDDING CO., Detroit, Mich. Filed Aug. 25, 1947.

PROGRESS

FOR MATTRESSES AND BOX SPRINGS.

Claims use since 1913.

Ser. No. 532,341. PROGRESS BEDDING CO., Detroit, Mich. Filed Aug. 25, 1947.

RESTOKRAFT

FOR MATTRESSES.

Claims use since 1917.

Ser. No. 535,965. HOUGH SHADE CORPORATION, Janesville, Wis. Filed Sept. 27, 1947.

RA-TOX

Applicant claims ownership of Registration No. 162,271.

FOR WOOD SLAT SHADES AND VENETIAN BLINDS.

Claims use since Jan. 31, 1922, on wood slat shades; and since January 1926 on Venetian blinds.

Ser. No. 542,804. APEX VENETIAN BLIND COMPANY, Philadelphia, Pa. Filed Dec. 1, 1947.

FOR VENETIAN BLINDS.

Claims use since Dec. 20, 1946.

Ser. No. 543,031. SIMON BACHE & COMPANY, New York, N. Y. Filed Sept. 20, 1947.

Evalast

Applicant claims ownership of Registration No. 253,584.

FOR WALL MIRRORS, HAND MIRRORS, AND MIRRORS IN THE NATURE OF FURNITURE.

Claims use since Dec. 27, 1927.

Ser. No. 543,815. LEGGETT & PLATT, INC., Carthage, Mo. Filed Dec. 9, 1947. Under section 2f of the act of 1946.

FLEX-O-TOP

FOR BED-SPRINGS.

Claims use since Dec. 31, 1938.

Ser. No. 546,907. S. KARPEN & BROS., Chicago, Ill. Filed Aug. 13, 1947.

Snug Harbor

Applicant claims ownership of Registration No. 343,409.

FOR DAVENPORTS, SOFAS, LOVE SEATS, CHAIRS OF THE FURNITURE TYPE, ROCKING CHAIRS, TABLES OF THE FURNITURE TYPE, DESKS, BEDS, DRESSERS, CHESTS OF THE FURNITURE TYPE FOR BEDROOMS, SIDEBOARDS, BUFFETS, AND CHINA CLOSETS.

Claims use since June 27, 1936.

Ser. No. 550,204. ALLIED SLEEP PRODUCTS, INC., Providence, R. I. Filed Feb. 20, 1948.

Vivacity BRAND

No claim is made to the word "Brand" apart from the mark.

FOR SOFA-BEDS, STUDIO COUCHES, BOX SPRINGS, BEDS, MATTRESSES, PILLOWS, AND CHAIRS IN THE NATURE OF FURNITURE.

Claims use since Dec. 19, 1947.

HUGHANGER

FOR CURTAIN ROD BRACKETS.
Claims use since Apr. 30, 1947.

CLASS 14
METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 243,330. Registered June 19, 1928. FIRTH-STERLING STEEL COMPANY, McKeesport, Pa. Republished by Firth Sterling Steel & Carbide Corporation, McKeesport, Pa., a corporation of Pennsylvania.

CROMOVAN

FOR STEEL BARS OF VARIOUS SHAPES AND SIZES, FORGINGS, BLOCKS, DISCS, AND PIECES OF STEEL.
Claims use since Dec. 15, 1927.

Reg. No. 284,285. Registered June 23, 1931. UNITED CONVEYOR CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DURITE

FOR ROUGH AND SEMIFINISHED IRON ALLOY CASTINGS.
Claims use since Nov. 15, 1930.

Reg. No. 424,355. Registered Oct. 1, 1946. J. M. RAOLE, Kansas City, Mo. Republished by registrant.

COMMANDO

FOR WELDING RODS.
Claims use since Nov. 14, 1944.

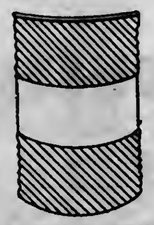
CLASS 15

OILS AND GREASES

Reg. No. 37,230. Registered Oct. 22, 1901. STERLING OIL CO., Emlenton, Pa. Republished by Quaker State Oil Refining Corporation, Oil City, Pa., a corporation of Delaware.

£

QUALITY.



FOR OILS AND GREASES.
Claims use since on or about Aug. 15, 1900.

Reg. No. 50,466. Registered Mar. 20, 1906. FRANK B. HOWER, Buffalo, N. Y. Republished by Quaker State Oil Refining Corporation, Oil City, Pa., a corporation of Delaware.

DUPLEX

FOR LUBRICATING OILS AND GREASE.
Claims use since June 1884.

Reg. No. 279,157. Registered Jan. 8, 1931. QUAKER STATE OIL REFINING CO., Oil City, Pa. Republished by Quaker State Oil Refining Corporation, Oil City, Pa., a corporation of Delaware.

The lining is for green, the unlined portion is white. No claim is made to the representation of the container.

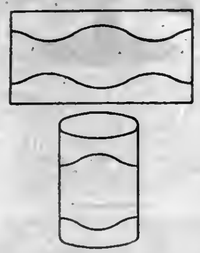
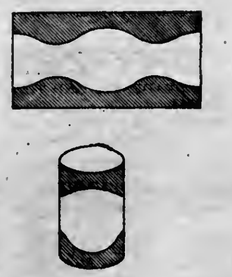
SUPERFUEL



The mark consists of the notation "Superfuel," no claim being made to the exclusive use of the word "Fuel" apart from the word "Super."
FOR MOTOR FUEL OILS.
Claims use since Oct. 17, 1931.

Reg. No. 305,468. Registered Aug. 15, 1933. QUAKER STATE OIL REFINING CO., Oil City, Pa. Republished by Quaker State Oil Refining Corporation, Oil City, Pa., a corporation of Delaware.

QUADROLUBE

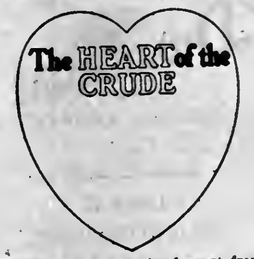


FOR LUBRICATING OILS AND GREASES.
Claims use since Mar. 23, 1933.

Reg. No. 312,645. Registered May 1, 1934. QUAKER STATE OIL REFINING CO., INC., Oil City, Pa. Republished by Quaker State Oil Refining Corporation, Oil City, Pa., a corporation of Delaware.

No claim is made to the representation of the container of the goods.
FOR LUBRICATING OILS AND GREASES.
Claims use since May 12, 1933.

Reg. No. 316,281. Registered Aug. 21, 1934. QUAKER STATE OIL REFINING CO. INC., Oil City, Pa. Republished by Quaker State Oil Refining Corporation, Oil City, Pa., a corporation of Delaware.



The trade-mark consists of an irregular shaped white band placed around a green can so that there is a bulged section of white on each side of the can. The representation of the container is disclaimed.
FOR LUBRICATING OILS AND GREASES.
Claims use since May 12, 1933.

Reg. No. 317,301. Registered Sept. 18, 1934. KATZ DRUG COMPANY, Kansas City, Mo., a corporation of Delaware. Republished by registrant.

The word "Certified" is disclaimed apart from the mark as shown.
FOR MOTOR LUBRICATING OIL AND GUN GREASE.
Claims use since on or about Apr. 1, 1931.

Reg. No. 331,286. Registered Dec. 31, 1935. ENTERPRISE OIL COMPANY, INC., Buffalo, N. Y. Republished by Quaker State Oil Refining Corporation, Oil City, Pa., a corporation of Delaware.

The word "Crude" is disclaimed apart from the mark as shown.
FOR LUBRICATING OILS.
Claims use since Mar. 5, 1928.

Reg. No. 331,828. Registered Jan. 21, 1936. THE LUBRIZOL CORPORATION, Wickliffe, Ohio. Republished by The Lubrizol Corporation, Wickliffe, Ohio, a corporation of Ohio.

SOLVENIZED

FOR HYDROCARBON FUELS SUCH AS GASOLINE AND CHEMICALLY TREATED LUBRICATING COMPOSITIONS SUCH AS LUBRICATING OIL AND GREASE.
Claims use since Mar. 22, 1935.

Reg. No. 333,757. Registered Apr. 7, 1936. THE LUBRIZOL CORPORATION, Wickliffe, Ohio. Republished by The Lubrizol Corporation, Wickliffe, Ohio, a corporation of Ohio.

Chases Carbon

FOR HYDROCARBON FUELS—NAMELY, GASOLINE: AND CHEMICALLY TREATED LUBRICATING COMPOSITIONS—NAMELY, LUBRICATING OIL AND GREASE.
Claims use since Apr. 24, 1935.

Reg. No. 336,158. Registered June 30, 1936. QUAKER STATE OIL REFINING COMPANY, Oil City, Pa. Republished by Quaker State Oil Refining Corporation, Oil City, Pa., a corporation of Delaware.

QUAKER STATE

FOR LUBRICATING OILS AND GREASES, FUEL AND ILLUMINATING OILS, ROAD OILS, BLENDED AND STRAIGHT REFINED GASOLENE AND WAX—NAMELY, PARAFFIN REFINED FROM PARAFFIN CRUDE PETROLEUM.
Claims use since May 12, 1933.

Reg. No. 336,159. Registered June 30, 1936. QUAKER STATE OIL REFINING COMPANY, Oil City, Pa. Republished by Quaker State Oil Refining Corporation, Oil City, Pa., a corporation of Delaware.

QUAKER STATE

FOR LUBRICATING OILS AND GREASES, FUEL AND ILLUMINATING OILS, ROAD OILS, BLENDED AND STRAIGHT REFINED GASOLENE AND WAX—NAMELY, PARAFFIN REFINED FROM PARAFFIN CRUDE PETROLEUM.
Claims use since 1914.

Reg. No. 385,309. Registered Feb. 25, 1941. HIRAM MYERS, doing business as Redex Manufacturing Company, Woodside, Long Island, N. Y. Republished by Redex, Incorporated, Brooklyn, N. Y., a corporation of New York.

REDEX

FOR LUBRICATING OIL.
Claims use since Feb. 14, 1934.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 158,645. Registered Sept. 12, 1922. THE DAMPNEY COMPANY OF AMERICA, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

NUMBER 3

FOR PROTECTIVE PAINT COATINGS.
Claims use since January 1916.

Reg. No. 210,432. Registered Mar. 16, 1926. RED SPOT PAINT & VARNISH COMPANY, INCORPORATED, Evansville, Ind., a corporation of Indiana. Republished by registrant.

FOR PAINT ENAMELS; DRY, PASTE, AND READY-MIXED PAINTS; AND FINISHING MATERIALS—NAMELY, PAINTS, ENAMELS, AND VARNISHES FOR ALL KINDS OF FINISHING PURPOSES.
Claims use since Mar. 12, 1914.

Reg. No. 216,030. Registered Aug. 3, 1926. THE DAMPNEY COMPANY OF AMERICA, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

NUMBER 1

FOR PROTECTIVE COATINGS FOR THE INSIDE OF BOILER DRUMS AND BOILER AND ECONOMIZER TUBES, ETC.
Claims use since Oct. 10, 1923.

Reg. No. 221,225. Registered Nov. 23, 1926. RED SPOT PAINT & VARNISH CO., INC., Evansville, Ind., a corporation of Indiana. Republished by registrant.

BRIL-LITE

FOR LIQUID PAINT.
Claims use since Jan. 14, 1923.

Reg. No. 221,228. Registered Nov. 23, 1926. RED SPOT PAINT & VARNISH CO., INC., Evansville, Ind., a corporation of Indiana. Republished by registrant.

GOTHIC

FOR LIQUID AND PASTE POLISHES AND WAXES FOR FLOORS, FURNITURE, WOODWORK, AND AUTOMOBILES, AND POWDERED DANCE-FLOOR WAX.
Claims use since Sept. 24, 1914.

Reg. No. 246,538. Registered Sept. 11, 1928. HILLYARD CHEMICAL COMPANY, St. Joseph, Mo., a corporation of Missouri. Republished by registrant.

HILLYARD'S

FOR FLOOR POLISH AND FLOOR DRESSING.
Claims use since Oct. 1, 1927.

Reg. No. 248,521. Registered Oct. 23, 1928. BERRY BROTHERS, INCORPORATED, Detroit, Mich., a corporation of Michigan. Republished by registrant.

Berrycraft

FOR VARNISH, STAIN, COMBINATION OF VARNISH AND STAIN, AND PAINT ENAMEL.
Claims use since on or about Oct. 1, 1912.

Reg. No. 248,522. Registered Oct. 23, 1928. BERRY BROTHERS, INCORPORATED, Detroit, Mich., a corporation of Michigan. Republished by registrant.

BERRYLOID

FOR LACQUERS, REDUCERS, READY-MIXED PAINT, AND PRIMERS.
Claims use since on or about Aug. 1, 1924.

Reg. No. 344,751. Registered Apr. 6, 1937. CON-FERRO PAINT & VARNISH COMPANY, St. Louis, Mo. Republished by F. W. Woolworth Co., New York, N. Y., a corporation of New York.

Duralustre

FOR PAINT ENAMELS, VARNISHES, AND VARNISH STAINS.
Claims use since Dec. 17, 1935.

CLASS 17
TOBACCO PRODUCTS

Reg. No. 67,773. Registered Feb. 18, 1908. WILLIAM ROBERT ALLEN, Manchester, England. Republished by John Sinclair, Limited, Newcastle-On-Tyne, England, a corporation of Great Britain.

THE CHAIRMAN

FOR CIGARETTES, CIGARS, SMOKING TOBACCO, AND CHEWING TOBACCO.
Claims use since June 30, 1897.

No claim is made to the representation of the label per se nor to any of the wording which appears on the drawing with the exception of the three "B's," "Old Guards," and the name of the corporation, namely, "The BBB Company, Ltd., apart from the mark as shown.
FOR SMOKING TOBACCO.
Claims use since July 1, 1935.

CLASS 19
VEHICLES

Reg. No. 249,591. Registered Nov. 20, 1928. JOHN WARREN WATSON COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

RUBBER FLOW

FOR FRICTION BRAKING MECHANISMS AND PARTS, RECOIL CHECKS, SHOCK-ABSORBING MECHANISMS, AND THE LIKE FOR VEHICLES.
Claims use since June 4, 1928.

Reg. No. 348,582. Registered Aug. 3, 1937. THE GEORGE WORTHINGTON COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

TRAIL BLAZER

FOR BICYCLES AND BICYCLE FRAMES, FORKS, HANDLE BARS, GRIPS, SADDLES, CRANKS, PEDALS, WHEELS, SPOKES, RIMS, AND HUBS.
Claims use since July 22, 1936.

CLASS 21
ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 313,293. Registered May 22, 1934. SPRAGUE SPECIALTIES CO., North Adams, Mass. Republished by Sprague Electric Company, North Adams, Mass., a corporation of Massachusetts.

SPRAGUE

FOR ELECTRICAL CONDENSERS.
Claims use since 1925.

Reg. No. 365,238. Registered Feb. 28, 1939. SPRAGUE PRODUCTS COMPANY, North Adams, Mass., a corporation of Massachusetts. Republished by registrant.

KOOLOHM

FOR ELECTRICAL RESISTORS.
Claims use since Aug. 22, 1938.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 136,615. Registered Nov. 2, 1920. CHARLES SCHINDLER, Toledo, Ohio. Republished by Schindler Stamping & Toy Co., Toledo, Ohio, a corporation of Ohio.

CUM-BAC

FOR ROLLING TOY OF CYLINDRICAL FORM.
Claims use since March 1909.

Reg. No. 162,060. Registered Dec. 5, 1922. DES MOINES GLOVE & MFG. COMPANY, INC., Des Moines, Iowa, a corporation of Iowa. Republished by registrant.

The word "Gloves" is disclaimed apart from the mark as shown.
FOR LEATHER GLOVES; LEATHER, KID, LAMB, AND CAPE DRESS GLOVES, LEATHER WORK GLOVES, AND BASEBALL MITTS.
Claims use since March 1918.

Reg. No. 408,918. Registered Sept. 5, 1944. BINKY BABY PRODUCTS COMPANY, New York, N. Y., a partnership. Republished by registrant.

Binkytoy

FOR TOY ANIMALS, TOY WAGONS, TOY ARMY TANKS, TOY CARTS, TOY AUTOMOBILES, TOY AIRPLANES, MOUNTING ANIMAL FIGURES—NAMELY, ELEPHANTS, HORSES, AND DOGS; FLOATING TOYS—NAMELY, TOY BOATS AND TOY BALLOONS; TEETHING TOYS—NAMELY, RATTLES AND DOLLS; TOY RATTLES, DOLLS, STUFFED ANIMAL TOYS.
Claims use since January 1939.

Reg. No. 438,596. Registered May 4, 1948. NORWICH LINE COMPANY, INC., Norwich, N. Y., a corporation of New York. Republished by registrant.

The circular outline is disclaimed apart from the mark as shown.
FOR FLY CASTING FISHING LINES.
Claims use since Mar. 25, 1946.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 176,653. Registered Nov. 27, 1923. HARTWELL BROTHERS, Memphis, Tenn., a corporation of Illinois. Republished by registrant.

JEWEL

FOR AX, ADZ, PICK, SLEDGE, MAUL, HAMMER, AND HATCHET; AND RAILROAD AND MINING TOOL HANDLES.
Claims use since July 1, 1904.

Reg. No. 176,655. Registered Nov. 27, 1923. HARTWELL BROTHERS, Memphis, Tenn., a corporation of Illinois. Republished by registrant.

BUCKEYE

FOR AX, ADZ, PICK, SLEDGE, MAUL, HAMMER AND HATCHET, AND RAILROAD AND MINING TOOL HANDLES.
Claims use since July 1, 1904.

Reg. No. 176,657. Registered Nov. 27, 1923. HARTWELL BROTHERS, Memphis, Tenn., a corporation of Illinois. Republished by registrant.

OLD HICKORY

FOR AX, ADZ, PICK, SLEDGE, MAUL, HAMMER AND HATCHET, AND RAILROAD AND MINING TOOL HANDLES.
Claims use since July 1, 1904.

Reg. No. 176,663. Registered Nov. 27, 1923. HARTWELL BROTHERS, Memphis, Tenn., a corporation of Illinois. Republished by registrant.

GEM

FOR AX, ADZE, PICK, SLEDGE, MAUL, HAMMER AND HATCHET, AND RAILROAD AND MINING TOOL HANDLES.
Claims use since July 1, 1904.

Reg. No. 176,675. Registered Nov. 27, 1923. HARTWELL BROTHERS, Memphis, Tenn., a corporation of Illinois. Republished by registrant.

HARTWELL

FOR AX, ADZ, PICK, SLEDGE, MAUL, HAMMER AND HATCHET, AND RAILROAD AND MINING TOOL HANDLES.
Claims use since January 1865.

Reg. No. 176,676. Registered Nov. 27, 1923. HARTWELL BROTHERS, Memphis, Tenn., a corporation of Illinois. Republished by registrant.

•THE CHIEFTAIN•

FOR AX, ADZ, PICK, SLEDGE, MAUL, HAMMER AND HATCHET, AND RAILROAD AND MINING TOOL HANDLES.
Claims use since July 1, 1904.

Reg. No. 176,677. Registered Nov. 27, 1923. HARTWELL BROTHERS, Memphis, Tenn., a corporation of Illinois. Republished by registrant.

• NABOB •

FOR AX, ADZ, PICK, SLEDGE, MAUL, HAMMER AND HATCHET, AND RAILROAD AND MINING TOOL HANDLES.
Claims use since July 1, 1904.

Reg. No. 176,678. Registered Nov. 27, 1923. HARTWELL BROTHERS, Memphis, Tenn., a corporation of Illinois. Republished by registrant.

HONEST ABE

FOR AX, ADZ, PICK, SLEDGE, MAUL, HAMMER AND HATCHET, AND RAILROAD AND MINING TOOL HANDLES.
Claims use since July 1, 1904.

Reg. No. 179,647. Registered Feb. 12, 1924. HARTWELL BROTHERS, Memphis, Tenn., a corporation of Illinois. Republished by registrant.

•AXEMAN'S PRIDE•

FOR AX, ADZ, PICK, SLEDGE, MAUL, HAMMER AND HATCHET, AND RAILROAD AND MINING TOOL HANDLES.
Claims use since July 1, 1904.

Reg. No. 183,848. Registered May 6, 1924. HARTWELL BROTHERS, Memphis, Tenn., a corporation of Illinois. Republished by registrant.

The words "Genuine Hickory" are disclaimed apart from the mark as shown.
FOR AX, ADZ, PICK, SLEDGE, MAUL, HAMMER AND HATCHET, AND RAILROAD AND MINING TOOL HANDLES.
Claims use since Sept. 1, 1923.

Reg. No. 212,682. Registered May 11, 1926. AMERICAN GRINDER MANUFACTURING CO., Milwaukee, Wis. Republished by Blackhawk Mfg. Co., Milwaukee, Wis., a corporation of Wisconsin.

FOR TOOLS—NAMELY, WRENCHES, POWER GRINDERS, AND SICKLE ATTACHMENTS.
Claims use since May 6, 1924.

Reg. No. 240,278. Registered Mar. 20, 1928. HARTWELL BROTHERS, Memphis, Tenn., a corporation of Illinois. Republished by registrant.

FOR AXE HEADS.
Claims use since Mar. 2, 1927.

Reg. No. 240,683. Registered Apr. 3, 1928. HARTWELL BROTHERS, Hollywood, Memphis, Tenn., Chicago Heights, Ill., and New York, N. Y., a corporation of Illinois. Republished by registrant, present address Memphis, Tenn.

RED ★ STAR

FOR BRAKEMAN'S CLUBS, RAMMER RODS, AND HANDLES FOR AXES, HATCHETS, ADZES, PICKS, GRUBBING HOES, HAMMERS, SLEDGES, TAMPERS, HEDGE KNIVES, SLASHERS, BUSH HOOKS, PICKAROONS, CHISELS, CANT HOOKS, PEAVEYS, AND LUG HOOKS.
Claims use since 1904.

Reg. No. 242,771. Registered June 5, 1928. CADILLAC STAMP COMPANY, INC., Detroit, Mich., a corporation of Michigan. Republished by registrant.

The words "Service" and "Cadillac" are disclaimed apart from the mark as shown.
FOR SPECIAL STEEL STAMPS, EMBOSSING AND MARKING DIES, POWER AND HAND MARKING MACHINES.
Claims use since early in 1922.

Reg. No. 248,051. Registered Oct. 16, 1928. JEAN JORDEAU, INC., South Orange, N. J., and New York, N. Y., a corporation of New Jersey. Republished by registrant, present address South Orange, N. J.

ZIP

FOR RAZORS.
Claims use since Jan. 15, 1912.

Reg. No. 309,040. Registered Dec. 26, 1933. HARTWELL BROTHERS, Memphis, Tenn., a corporation of Illinois. Republished by registrant.

CAVALIER

FOR HANDLES FOR TOOLS.
Claims use since July 1, 1933.

Reg. No. 309,041. Registered Dec. 26, 1933. HARTWELL BROTHERS, Memphis, Tenn., a corporation of Illinois. Republished by registrant.

CRUSADER

FOR HANDLES FOR TOOLS.
Claims use since July 1, 1933.

Reg. No. 328,150. Registered Sept. 17, 1935. KATZ DRUG COMPANY, Kansas City, Mo., a corporation of Delaware. Republished by registrant.

Katz

The word "Katz" is disclaimed apart from the mark as shown.
FOR RAZORS AND RAZOR BLADES.
Claims use since Nov. 2, 1933.

Reg. No. 351,349. Registered Oct. 26, 1937. NATIONAL AUTOMOTIVE PARTS ASSOCIATION, Detroit, Mich., a corporation of Michigan. Republished by registrant.

Allied

FOR PISTONS, PISTON PINS, PISTON PIN BUSHINGS, MOTOR BEARINGS, VALVES, VALVE GUIDES, TIMING GEARS, TIMING CHAINS, CYLINDER HEADS, MANIFOLDS, WATER PUMPS, AND FUEL PUMPS.
Claims use since Jan. 10, 1937.

Reg. No. 394,436. Registered Apr. 7, 1942. UNIVERSAL CRUSHER COMPANY, Cedar Rapids, Iowa. Republished by Universal Engineering Corporation, Cedar Rapids, Iowa, a corporation of Iowa.

PACEMAKER

FOR DEVICE FOR CRUSHING, SCREENING, LOADING, AND HANDLING ROCK AND SIMILAR MATERIALS, PLANTS COMPRISING ASSEMBLIES OF SUCH DEVICES, AND PARTS THEREOF.
Claims use since Nov. 8, 1939.

Reg. No. 396,777. Registered Aug. 4, 1942. THE DENISON ENGINEERING COMPANY, Columbus, Ohio, a corporation of Ohio. Republished by registrant.

HydrOilers

The word "Oil" is disclaimed apart from the mark as shown.
FOR HYDRAULIC PUMPS, HYDRAULIC PRESSES, HYDRAULIC KILN CAR PROPELLERS, AUTOMATIC BAR MACHINES, STRAIGHTENING PRESSES, HORIZONTAL PRESSES, BENCH PRESSES, HYDRAULIC PRESSES WITH ROTARY INDEXING TABLES, BRIQUETTING PRESSES, HYDRAULIC MACHINES FOR STRAIGHTENING CENTERS, BAND-TYPE PRESSES, HYDRAULIC TILTING GEARS FOR CRUCIBLES AND FURNACES, HYDRAULIC ELEVATORS, DECKLING MACHINES FOR PHOTOGRAPHIC MOUNTING CARDS, POWER TRANSMISSION DEVICE FOR ROTARY CIRCULAR KILNS, HYDRAULIC BILLET PUSHERS, HYDRAULIC CLAY EXTRUSION APPARATUS, HYDRAULIC JACKS, HYDRAULIC CYLINDERS, PISTONS AND RAMS, ASSEMBLING PRESSES, VERTICAL OPEN SIDE PRESSES, VARIABLE VOLUME HYDRAULIC PUMPS, CONSTANT PRESSURE PUMPS, HYDRAULIC POWER UNITS, COMBINATION HYDRAULIC AND PNEUMATIC VALVES, BALANCED PISTON TYPE VALVES, HYDRAULIC OPERATING MECHANISMS FOR ELECTRICAL CONTROL PANELS.
Claims use since Aug. 1, 1941.

Reg. No. 437,419. Registered Mar. 23, 1948. LA-DEL CONVEYOR & MANUFACTURING COMPANY, New Philadelphia, Ohio, now by merger Joy Manufacturing Company. Republished by Joy Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania.

LA-DEL

FOR UNDERGROUND MINING CONVEYORS OF ALL TYPES—NAMELY, SHAKER CONVEYORS, BELT CONVEYORS, CHAIN CONVEYORS; DRIVING MECHANISMS COMPRISING, GENERALLY, A BASE, MOTOR, GEARING AND DRIVING CONNECTIONS FOR ACTUATING SAID CONVEYORS; ELEVATORS, COMPRISING A SUITABLE SECTION OF CONVEYOR AND A DRIVING MECHANISM, SET IN AN ELEVATING FRAME; PIT CAR LOADERS AND LOADING MACHINES, EACH COMPRISED OF A UNIT OF CONVEYOR SECTION SET IN A FRAME, SUITABLY POWERED, AND THE UNIT BEING MOUNTED FOR OPERATION; AND SUPPLY TRUCKS FOR OPERATION IN THE CONVEYOR CHUTES.
Claims use since on or about June 1, 1932.

Reg. No. 438,478. Registered Apr. 20, 1948. BASIC FOODS SALES CORP., New York, N. Y., a corporation of New York. Republished by registrant.

FOR ICING MACHINES USED IN CONNECTION WITH BAKERY PRODUCTS, I. E., TO APPLY ICING TO CAKES AND COOKIES.
Claims use since May 16, 1947.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 374,109. Registered Jan. 2, 1940. THE BARTON CORPORATION, West Bend, Wis., a corporation of Wisconsin. Republished by registrant.

CONTROLA

SPEED

The word "Speed" is disclaimed apart from the mark as shown.
FOR LAUNDRY WASHING MACHINES.
Claims use since on or about Mar. 3, 1939.

Reg. No. 349,695. Registered Aug. 31, 1937. THE GEORGE WORTHINGTON COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

TRAIL BLAZER

FOR VERNIER CALIPERS, VERNIER HEIGHT GAUGES, VERNIER DEPTH GAUGES, MICROMETERS, ENGINEERS' TAPER GAUGES, ENGINEERS' WIRE GAUGES, AND ENGINEERS' THICKNESS GAUGES, STEEL RULES, AND CENTER GAUGES.
Claims use since Sept. 1, 1936.

Reg. No. 375,397. Registered Feb. 20, 1940. IRON FIREMAN MANUFACTURING COMPANY, Portland, Oreg., a corporation of Oregon. Republished by registrant.

IRON FIREMAN

FOR THERMOSTATICALLY-CONTROLLED ELECTRIC SWITCHES ESPECIALLY ADAPTED FOR CONTROLLING HEAT-GENERATING DEVICES SUCH AS OIL, GAS, AND SOLID-FUEL FURNACES.
Claims use since July 27, 1926.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 268,553. Registered Mar. 18, 1930. COHN & ROSENBERGER, INC., New York, N. Y. Republished by Coro, Inc., New York, N. Y., a corporation of New York.

DUETTE

FOR FINGER RINGS, NECKLACES, BRACELETS, EARRINGS, AND BROOCHES, AND FOR HATPINS, HAT ORNAMENTS, NECKLACE CLASPS, VANITY CASES, CIGARETTE CASES, MESH BAGS, AND MESH-BAG FRAMES, MADE WHOLLY OR IN PART OF OR PLATED WITH PRECIOUS METAL.
Claims use since Oct. 1, 1929.

CLASS 33

GLASSWARE

Reg. No. 231,759. Registered Aug. 23, 1927. Obear-Nester Glass Co., St. Louis, Mo., a corporation of Missouri. Republished by registrant, present address East St. Louis, Ill.

Rex

FOR PRESCRIPTION BOTTLES MADE OF GLASS.
Claims use since Jan. 2, 1896.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Reg. No. 195,811. Registered Mar. 3, 1925. Portland Wire & Iron Works, Portland, Oreg. Republished by Iron Fireman Manufacturing Company, Portland, Oreg., a corporation of Oregon.

FOR AUTOMATIC COAL BURNERS.
Claims use since July 1923.

Reg. No. 268,300. Registered Mar. 11, 1930. Iron Fireman Manufacturing Company, Portland, Oreg., a corporation of Oregon. Republished by registrant.

The parallel vertical lines on the drawing forming the background represent the color red.
FOR AUTOMATIC COAL BURNERS.
Claims use since June 16, 1926.

Reg. No. 275,093. Registered Sept. 16, 1930. Iron Fireman Manufacturing Company, Portland, Oreg., a corporation of Oregon. Republished by registrant.

De Luxe

FOR AUTOMATIC COAL BURNERS NOT INCLUDING ELECTRICAL APPARATUS.
Claims use since May 13, 1929.

Reg. No. 277,425. Registered Nov. 11, 1930. Iron Fireman Manufacturing Company, Portland, Oreg., a corporation of Oregon. Republished by registrant.

The Iron Man

FOR AUTOMATIC COAL BURNERS.
Claims use since May 2, 1930.

Reg. No. 290,844. Registered Jan. 19, 1932. Iron Fireman Manufacturing Company, Portland, Oreg., a corporation of Oregon. Republished by registrant.

FOR AUTOMATIC COAL BURNERS.
Claims use since May 27, 1931.

Reg. No. 297,251. Registered Sept. 6, 1932. Iron Fireman Manufacturing Company, Portland, Oreg., a corporation of Oregon. Republished by registrant.

Junior

FOR AUTOMATIC COAL BURNERS.
Claims use since Feb. 28, 1927.

Reg. No. 325,237. Registered June 18, 1935. Iron Fireman Manufacturing Company, Portland, Oreg., a corporation of Oregon. Republished by registrant.

POWERAM

FOR AUTOMATIC COAL BURNERS.
Claims use since Dec. 28, 1934.

Reg. No. 346,069. Registered May 18, 1937. Iron Fireman Manufacturing Company, Portland, Oreg., a corporation of Oregon. Republished by registrant.

COAL FLOW

FOR AUTOMATIC COAL BURNERS.
Claims use since Jan. 10, 1936.

Reg. No. 349,342. Registered Aug. 24, 1937. Iron Fireman Manufacturing Company, Portland, Oreg., a corporation of Oregon. Republished by registrant.

IF

FOR AUTOMATIC COAL BURNERS.
Claims use since Mar. 10, 1937.

Reg. No. 381,423. Registered Sept. 24, 1940. Iron Fireman Manufacturing Company, Portland, Oreg., a corporation of Oregon. Republished by registrant.

AIR-ACE

FOR COAL AND OIL BURNING FURNACES, AIR CONDITIONERS, SUMMER COOLING AND CIRCULATING FANS.

The words "Light Bread" are disclaimed apart from the mark as shown.
FOR WHEAT FLOUR.
Claims use since Dec. 10, 1937.

Reg. No. 357,901. Registered June 21, 1938. CHICAGO SMOKED FISH CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

The drawing is lined for yellow, red, and black. The representation of the tag, aside from the color arrangement, is disclaimed apart from the mark as shown.
FOR SMOKED FISH AND CANNED FISH.
Claims use since June 4, 1937.

Reg. No. 361,569. Registered Oct. 25, 1938. CHICAGO SMOKED FISH CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

AALEPH

FOR SMOKED FISH, PICKLED FISH, SALTED FISH, AND CANNED FISH.
Claims use since Aug. 30, 1937.

Reg. No. 365,617. Registered Mar. 14, 1939. CENTRAL SOYA COMPANY, INC., Fort Wayne, Ind., a corporation of Indiana. Republished by registrant.

CENTRAL STAR

FOR SOYBEAN OIL MEAL AND SOYBEAN FLAKES USED IN THE MANUFACTURE OF STOCK AND POULTRY FEEDS.
Claims use since June 14, 1938.

Reg. No. 365,725. Registered Mar. 14, 1939. JOHN MACKINTOSH & SONS LTD., INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

TOFFEELATE

FOR CANDY.
Claims use since Nov. 1, 1938.

Reg. No. 367,375. Registered May 16, 1939. CURT MICHAELIS, Jersey City, N. J. Republished by registrant.

PANTEX

FOR SHORTENING IN SOLID FORM AND OF VEGETABLE ORIGIN, FOR USE IN COOKING AND BAKING, AS IN THE PREPARATION OF CAKE ICINGS.
Claims use since Jan. 15, 1935.

Reg. No. 367,487. Registered May 16, 1939. BASIC FOODS, INC., Jersey City, N. J. Republished by Basic Foods, Inc., New York, N. Y., a corporation of New York.

FOR ICINGS FOR CAKES AND COOKIES.
Claims use since Nov. 1, 1933.

Reg. No. 368,713. Registered June 27, 1939. CHASE & COMPANY, Sanford, Fla., a corporation of Florida. Republished by registrant.

CELERYETTS

FOR CELERY.
Claims use since Jan. 28, 1939.

Reg. No. 368,755. Registered June 27, 1939. BEAR CREEK ORCHARDS, Medford, Oreg. Republished by Harry and David, Medford, Oreg., a corporation of Oregon.

OREGOLD

FOR FRESH DECIDUOUS FRUITS.
Claims use since May 30, 1938.

Reg. No. 368,898. Registered July 4, 1939. BEAR CREEK ORCHARDS, doing business as Rosenberg Bros., Medford, Oreg. Republished by Harry and David, Medford, Oreg., a corporation of Oregon.

Royal Riviera DELICACIES ROSENBERG BROS. MEDFORD · OREGON

The words "Delicacies" and "Rosenberg Bros., Medford, Oregon" are disclaimed apart from the mark as shown.
FOR CANNED FRUITS.
Claims use since April 1937.

Reg. No. 369,977. Registered Aug. 8, 1939. SEABOARD LEMON ASSOCIATION, Oxnard, Calif., a corporation of California. Republished by registrant.

CUTTER

FOR FRESH CITRUS FRUIT.
Claims use since Nov. 5, 1938.

Reg. No. 370,296. Registered Aug. 22, 1939. B. FILIPPONE & CO., INC., Passaic, N. J., a corporation of New Jersey. Republished by registrant.

FIOR DI PASQUA

FOR MACARONI.
Claims use since Apr. 5, 1939.

Reg. No. 374,805. Registered Jan. 23, 1940. THE CREAM OF WHEAT CORPORATION, Minneapolis, Minn., a corporation of Delaware. Republished by registrant.

FOR WHEAT BREAKFAST FOOD.
Claims use since Oct. 1, 1938.

Reg. No. 375,322. Registered Feb. 13, 1940. ANTHONY ORLANDELLA, Boston, Mass., and Lodi, Calif. Republished by registrant, present address Boston, Mass.

FOR FRESH FRUITS—NAMELY, FRESH GRAPES.
Claims use since Sept. 2, 1939.

Reg. No. 378,247. Registered June 4, 1940. THE CREAM OF WHEAT CORPORATION, Minneapolis, Minn., a corporation of Delaware. Republished by registrant.

CREAM OF WHEAT

FOR WHEAT BREAKFAST FOOD.
Claims use since Oct. 1, 1938.

Reg. No. 380,284. Registered Aug. 20, 1940. THE CREAM OF WHEAT CORPORATION, Minneapolis, Minn., a corporation of Delaware. Republished by registrant.

CREAM OF WHEAT

FOR WHEAT BREAKFAST FOOD.
Claims use since Oct. 1, 1938.

Reg. No. 389,457. Registered Aug. 20, 1940. CHASE & COMPANY, Sanford, Fla., a corporation of Florida. Republished by registrant.

FOR CELERY.
Claims use since Mar. 15, 1940.

Reg. No. 384,863. Registered Feb. 4, 1941. THE CREAM OF WHEAT CORPORATION, Minneapolis, Minn., a corporation of Delaware. Republished by registrant.

ZING!

FOR WHEAT GERM.
Claims use since Sept. 6, 1940.

Reg. No. 385,495. Registered Mar. 4, 1941. RED-EE FOODS, INC., Los Angeles, Calif. Republished by Cinch Products, Inc., Los Angeles, Calif., a corporation of California.

"It's a Cinch to make" ADD WATER, MIX & BAKE!

All wording is disclaimed with the exception of "Cinch" apart from the mark as shown.
FOR CAKE MIX AND ICING.
Claims use since May 24, 1940.

Reg. No. 387,953. Registered June 10, 1941. BASIC FOODS SALES CORP., Jersey City, N. J., a corporation of New York. Republished by registrant, present address New York, N. Y.

"A CAKE SELLS NO BETTER THAN THE ICING THAT COVERS IT"

The word "Icing" is disclaimed apart from the mark as shown.
FOR ICING FOR CAKES AND COOKIES.
Claims use since May 20, 1940.

Reg. No. 392,990. Registered Jan. 20, 1942. CENTRAL SOYA COMPANY, INC., Fort Wayne, Ind., a corporation of Indiana. Republished by registrant.

DOGBURGER

FOR DOG FOOD.
Claims use since Sept. 11, 1941.

Reg. No. 395,085. Registered May 12, 1942. RED-EE FOODS, INC., Los Angeles, Calif. Republished by Cinch Products, Inc., Los Angeles, Calif., a corporation of California.

Cinch

FOR PARTLY PREPARED APPLESAUCE.
Claims use since June 4, 1921.

Reg. No. 404,134. Registered Nov. 2, 1943. WACHSBERG PICKLE WORKS, Bayonne and Hoboken, N. J., a firm. Republished by registrant, present address Bayonne, N. J.

Sonia

FOR DILL PICKLES, SWEET MIXED PICKLES, SWEET PICKLE RINGS, SWEET PICKLES, SWEET PICKLE RELISH, PICKLED PEPPERS, SWEET ONIONS, QUEEN OLIVES, STUFFED OLIVES, HORSERADISH, MAYONNAISE, MARASCHINO CHERRIES, AND MUSTARD.
Claims use since 1920.

Reg. No. 417,943. Registered Nov. 20, 1945. CURT MICHAELIS, New York, N. Y. Republished by registrant.

PANTRY SHORTENING

The word "Shortening" is disclaimed apart from the mark as shown.

FOR SHORTENING IN SOLID FORM AND OF VEGETABLE ORIGIN, FOR USE IN COOKING AND BAKING, AS IN THE PREPARATION OF CAKE ICINGS.

Claims use since May 25, 1945.

Reg. No. 418,723. Registered Jan. 8, 1946. PIEDMONT MILLS, INC., Lynchburg, Va., a corporation of Virginia. Republished by registrant.

UTOPIA

FOR SELF-RISING BISCUIT FLOUR.
Claims use since 1910.

Reg. No. 419,460. Registered Feb. 19, 1946. BASIC FOODS SALES CORP., New York, N. Y., a corporation of New York. Republished by registrant.

THE BAKED GOODS' SALESMAN

The words "Baked Goods" are disclaimed apart from the mark as shown.

FOR ICINGS FOR CAKES AND COOKIES.
Claims use since Aug. 31, 1944.

Reg. No. 426,367. Registered Dec. 24, 1946. HUNT FOODS, INC., San Francisco, Calif., a corporation of Delaware. Republished by registrant, present address, Los Angeles, Calif.

Hunt's

FOR CANNED FRUITS AND VEGETABLES.
Claims use since 1890.

Reg. No. 427,004. Registered Jan. 21, 1947. BRYN MAWR FRUIT GROWERS ASSOCIATION, Bryn Mawr, Calif., a corporation of California. Republished by registrant.

REDLANDS JOY

The geographical word "Redlands" is disclaimed apart from the mark as shown.

FOR FRESH CITRUS FRUITS.
Claims use since January 1932.

Reg. No. 436,203. Registered Jan. 27, 1948. L. C. GROVER, San Francisco, Calif. Republished by registrant.

The words "Treat" and the representation of the label are disclaimed apart from the mark as shown.

FOR CANNED VEGETABLE JUICES—NAMELY, CANNED TOMATO JUICE.
Claims use since November 1946.

Reg. No. 437,276. Registered Mar. 9, 1948. MARYIME MILLING CO., INC., Buffalo, N. Y., a corporation of New York. Republished by registrant.

HI-TEST

FOR DAIRY FEED AND HOG FEED.
Claims use since Nov. 1, 1918.

Reg. No. 438,521. Registered Apr. 27, 1948. KRAFT FOODS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

KRAYLETS

FOR FEED SUPPLEMENT COMPOSED OF EIGHTY PERCENT MILK PRODUCTS AND THEIR BY-PRODUCTS.
Claims use since Dec. 21, 1945.

Reg. No. 438,544. Registered Apr. 27, 1948. KELCO COMPANY, San Diego, Calif., a corporation of Delaware. Republished by registrant.

DRICOID

FOR ALGIN-EMULSIFIER COMPOSITION POSSESSING STABILIZING, EMULSIFYING, BODYING, SUSPENDING, AND WATER-HOLDING PROPERTIES IN DAIRY PRODUCTS SUCH AS ICE CREAM, SHERBETS, CHOCOLATE MILK, AND CHEESE AND OTHER FOOD USES.
Claims use since about Mar. 31, 1947.

Reg. No. 438,550. Registered Apr. 27, 1948. VALLEY PRODUCE DISTRIBUTORS, Phoenix, Ariz., a firm. Republished by registrant.

FOR FRESH VEGETABLES.
Claims use since Dec. 20, 1930.

Reg. No. 438,589. Registered May 4, 1948. RODDENBERRY-MOLICA COMPANY, Delano, Calif., a corporation of California. Republished by registrant.

Delagold

FOR FRESH GRAPES AND MELONS.
Claims use since June 26, 1946.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 94,240. Registered Nov. 18, 1913. MINNEAPOLIS BREWING COMPANY, Minneapolis, Minn. Republished by Minneapolis Brewing Company (1933), Minneapolis, Minn., a corporation of Minnesota.

Grain Belt

FOR BEER.
Claims use since Dec. 23, 1895.

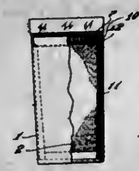
Reg. No. 309,099. Registered Jan. 2, 1934. THE FITGER COMPANY, Duluth, Minn., now by change of name Fitger Brewing Company. Republished by Fitger Brewing Company, Duluth, Minn., a corporation of Minnesota.

FITGER'S NATURAL

The showing of the star is lined to indicate the color red.

FOR MALT BEVERAGES WITH NOT MORE THAN THE LEGAL ALCOHOLIC CONTENT.
Claims use since 1904.

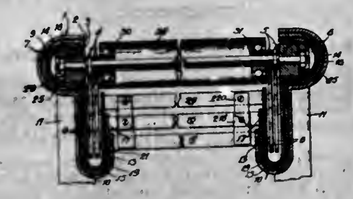
Reg. No. 309,100. Registered Jan. 2, 1934. THE FITGER COMPANY, Duluth, Minn., now by change of name Fitger Brewing Company. Republished by Fitger Brewing Company, Duluth, Minn., a corporation of Minnesota.



NATURAL

FOR MALT BEVERAGES WITH NOT MORE THAN THE LEGAL ALCOHOLIC CONTENT.
Claims use since 1914.

REISSUES



MAY 3, 1949

23,106
DOUBLE WALL VESSEL
Russell A. Gulick, Lyanfield, Mass., assignor, by mesne assignments, to Stator Corporation, a corporation of Rhode Island
Original No. 2,448,589, dated September 7, 1948, Serial No. 493,371, July 3, 1943. Application for reissue February 24, 1949, Serial No. 78,121
5 Claims. (Cl. 215—13)

4. In the manufacture of double-wall vessels of the type having nested inner and outer containers of ceramic material which comprises narrow upper end portions and wide lower body portions, the upper end portions having inner and outer opposing surfaces with a narrow space therebetween and the lower body portions also having inner and outer opposing surfaces with a space therebetween, the method which comprises fire-coloring a surface of the outer container throughout only the relatively narrow annular zone substantially coextensive with the width of its said narrow upper end portion, fire-coloring the outer surface of the inner container throughout at least the relatively narrow annular zone substantially coextensive with the width of its said narrow upper end portion and applying a band of cementitious material in said narrow space between said narrow upper end portions to seal the space and bond the containers together.

23,107
EXTENSIBLE CONVEYER
Leslie A. Mapes, Palisade, N. J.
Original No. 2,445,960, dated July 27, 1948, Serial No. 662,717, April 17, 1946. Application for reissue December 14, 1948, Serial No. 65,278
5 Claims. (Cl. 193—35)

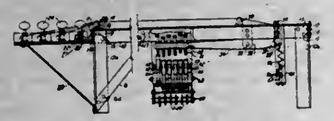
3. In a conveyor, the combination of a plurality of sections, each section including a pair of side casings, the side casings of the successive sections on each side forming a set telescopically slidable into one another, each of said side casings having an upper laterally extending U-shaped portion and a downwardly extending U-shaped portion, crossbars connecting each pair of side casings to one another, cargo supporting rotatable means, shafts operatively associated with said rotatable means, rollers on the ends of said shafts being rotatably mounted in the laterally extending U-shaped portions, chains connected at their ends to the free ends of the end side casings, said chains including links each link being connected at one end to a shaft and having a slot to slidably receive a succeeding shaft, the slots in said links cooperating with said shafts to enable said sections to be telescoped into one another in closed position when said links will be suspended in said downwardly extending U-shaped portions, the slots also cooperating with said shafts to enable said sections to be extended into expanded or open position, and stops on some of the crossbars engaging adjacent crossbars of adjacent sections in expanded position and engaging other adjacent crossbars of adjacent sections in closed position to determine the open and closed position of the sections.

23,108
AXIAL BLOWER
Edward A. Stalker, Bay City, Mich.
Original No. 2,405,768, dated August 13, 1946, Serial No. 490,415, June 11, 1943. Application for reissue February 17, 1949, Serial No. 77,041
12 Claims. (Cl. 230—122)

1. In an axial flow blower, an enclosing casing, a blade having a basic airfoil section whose maximum thickness lies between stations at 40 per cent and 60 per cent of the chord length from the leading edge and whose upper contour ahead of the maximum thickness ordinate lies in major part within boundary curves whose mean curve is an elliptic quadrant passing through the nose point of the section and the end point of the said maximum thickness ordinate, said maximum thickness ordinate serving as the minor semi-axis of said quadrant, the outer curve of said boundary curves being an auxiliary elliptic quadrant passing through said nose point and the end of an auxiliary minor semi-axis at the 0.3 point of the chord and extending on to the outer end of said maximum thickness ordinate, said auxiliary minor semi-axis being equal to one-half the said maximum thickness of the said airfoil section, and means to mount said blade within said casing to induce a flow therethrough.

PATENTS

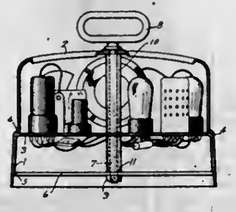
GRANTED MAY 3, 1949



2,468,724
WRINKLE FLEXIBLE MATERIAL WITH RUBBER SOLUTION COATING
Nathan T. Beynon, Dayton, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application March 21, 1946, Serial No. 656,173
8 Claims. (Cl. 117—161)

1. The method of manufacturing flexible, wrinkle-coated materials comprising the steps of mixing at room temperature 100 parts by weight of unsaturated fatty oil with varnish solvent and a solution of 40 parts by weight synthetic rubber selected from the group consisting of butadiene styrene copolymer, butadiene acrylonitrile copolymer and neoprene, applying the mixture thus obtained to a base material, and subjecting the coated material to drying at substantially 130° F. for approximately 30 minutes and then at substantially 180° F. for a period of from about 30 to 60 minutes.

2,468,725
PREPARATION OF LONG-CHAIN ESTERS OF BETA-THIODIPROPIONIC ACID
William F. Gresham and Myers F. Gribbins, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 8, 1947, Serial No. 740,268
5 Claims. (Cl. 260—481)

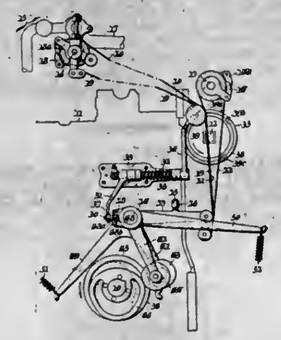


5. A process for the preparation of a substantially odorless and tasteless monohydric alcohol ester of beta-thiodipropionic acid, the alcohol containing 10 to 24 carbon atoms, which comprises heating a lower dialkyl ester of beta-thiodipropionic acid with a monohydric alcohol containing 10 to 24 carbon atoms in the presence of an acid catalyst while withdrawing the lower boiling alcohol formed, the reaction being conducted at a temperature below 250° C.

2,468,726
MUSICAL INSTRUMENT
George Barr, New York, N. Y., assignor to Frank C. Allen, Jr., Pelham Manor, N. Y.
Application June 9, 1945, Serial No. 598,523
14 Claims. (Cl. 84—312)

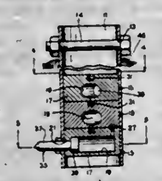
1. In a musical instrument having a string fixedly anchored at both ends and passing over two bridge members and including means for normally tuning the string, a tensioning member connected to the string between one of said anchored ends and its associated bridge member, a series of adjustable elements on the member, and a corresponding series of manually operable elements adapted to be moved into engagement with the selected ones of said adjustable elements one at a time to pull down on said string thereby to vary the tension in the string by predetermined amounts.

2,468,727
SECTIONAL RADIO CABINET
Joseph J. Bauman, Chicago, Ill., assignor to Kurz-Kasch, Inc., Dayton, Ohio, a corporation of Ohio
Application June 14, 1944, Serial No. 540,265
14 Claims. (Cl. 250—16)



1. A radio cabinet, including a base section and a dome or cover section both molded from plastic material and interchangeable with other similar sections of different color or of different ornamental design to afford sundry combinations of distinctive appearance, a horizontal instrument panel forming a top for the base section and adapted to support sundry elements of radio equipment, a bottom for the base section of nonfragile substantially rigid material, a tie bolt extending through the dome or cover, the instrument panel and the base bottom, a handle attached to the top end of the tie bolt and a nut on the lower end thereof beneath the base bottom, the construction and arrangement being such that the weight of the assembly when carried by the handle is sustained entirely by the tie bolt and the base bottom, independently of any tension strains on the base or dome.

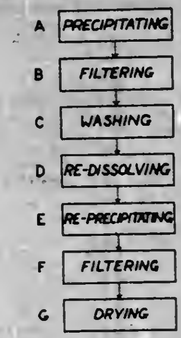
2,468,728
RACKING MECHANISM FOR KNITTING MACHINES
Emil J. Berger and Howard K. West, Lansdale, Pa., assignors to The Dexdale Hosiery Mills, Lansdale, Pa., a corporation of Pennsylvania
Application October 15, 1947, Serial No. 779,948
6 Claims. (Cl. 66—89)



1. Racking mechanism for a knitting machine having a main cam shaft and a narrowing screw spindle, said mechanism including a ratchet wheel on the spindle, a pawl bodily oscillatable about the spindle to act upon the ratchet wheel, a lever fulcrumed to rock on a fixed axis, interposed operating connections between the pawl and the lever, a pair of rotary cams on the main

cam shaft, two arms adapted to be motivated by the respective cams, and clutch means for selec-

tively connecting the lever to one or the other of the two arms for actuation thereby.



2,468,729
ANCHORAGE
Eric A. Black, Red Bank, N. J.
Application October 5, 1945, Serial No. 620,619
2 Claims. (Cl. 189—92)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an anchorage, a hollow pile, a fluke pistol member snugly fitting within said pile and positionable slidably within said pile, said pistol member including a projectile having a fluke and a head of greater diameter, explosive means to propel the fluke through the wall of the hollow pile, and means within the pistol member to retain the head within the pistol member.

2,468,730
METHOD OF PURIFYING CASEIN
Richard J. Block, Scarsdale, and Hartley W. Howard, Irvington, N. Y., assignors to The Borden Company, New York, N. Y., a corporation of New Jersey
Application October 19, 1945, Serial No. 623,250
6 Claims. (Cl. 260—120)

1. In a process for preparing purified casein, the steps comprising adjusting an aqueous solution of casein which has a pH above 6 to a pH between 4.0 and 6.0 and thereby precipitating casein, separating the precipitate from the filtrate, suspending the precipitate in an aqueous medium, then adding sufficient sulfur dioxide gas thereto so as to adjust the pH to about 1.9 and thereby form a colloidal sol of the casein, and finally re-precipitating said casein by ad-

justing the pH to between 4.0 to 6.0, thus producing a purified product.

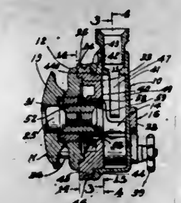
2,468,731
PRODUCTION OF ORNAMENTED EMBOSSED ARTICLES
Gustave W. Borkland, Marion, Ind.
Application April 26, 1946, Serial No. 665,293
1 Claim. (Cl. 41—24)

Method of producing an ornamented embossed thermoplastic article which comprises the steps of suitably heating a sheet of permanently thermoplastic material having the property of returning to the flat condition when heated after shaping; drawing it into the desired contour and cooling it to effect retention of said contour; applying a decorative coating to selected embossed areas of the thus produced embossed article; re-heating said article to effect its reconversion into a substantially flat sheet, whereby the applied coating will assume a pattern corresponding substantially to a projection of the embossed areas of said article; photographing the re-flattened sheet and from the image obtained producing a printing-plate; imprinting a second sheet of thermoplastic material with a reproduction of said pattern by means of said plate; and embossing said second sheet to produce a reproduction of the original decorated embossed form.

2,468,732
TEETH CLEANING UNIT
Marcel Boulicault, St. Louis, Mo.
Application August 27, 1945, Serial No. 612,783
7 Claims. (Cl. 132—84)

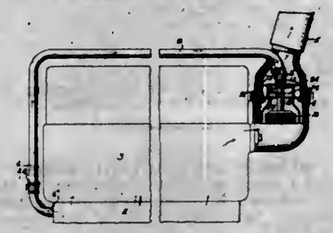
1. A teeth cleaning unit including in combination, a brush section and a hollow handle section, said brush section comprising a brush stem supporting the brush bristles secured at one end thereof to one end of said hollow handle section, said hollow handle section being open at the opposite end thereof and having a compartment for the reception of dentifrice, a dentifrice dispenser having a dentifrice receiving casing adapted to removably telescope into the dentifrice compartment of said hollow handle section, said dentifrice dispenser having a head portion as a

part thereof providing a closure for the lower end of said handle section, said dentifrice dispenser being bodily removable from said handle section



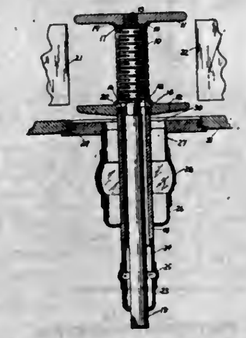
for application of dentifrice to the brush bristles of said brush section as secured to one end of said handle section.

2,468,733
TEETH CLEANING UNIT
Marcel Boulicault, St. Louis, Mo.
Application April 24, 1946, Serial No. 664,614
14 Claims. (Cl. 132—84)



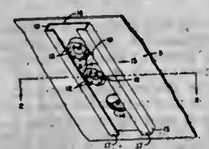
1. A teeth cleaning unit including in combination, a tubular handle section having a brush compartment and a dentifrice compartment, a brush section comprising a brush stem supporting the brush bristles and a base portion at the base end of the brush stem, said base portion providing a closure for the brush compartment of the tubular handle section, means associated with said base portion for detachably securing said brush section to said tubular handle section in use position, means associated with said base portion for detachably securing the brush section to the handle section with the brush stem and brush bristles in housed position within the brush compartment of said handle section, a drying compartment having a perforated wall presenting passages through which moisture in the brush compartment may flow into said drying compartment when the brush stem and brush bristles are in housed position within said brush compartment, a dentifrice holder including a head portion providing a closure for the dentifrice compartment of said tubular handle section, said head portion having means for containing and supporting a dentifrice, and means for detachably securing said head portion to the tubular handle section with the dentifrice supported thereby in housed position within the dentifrice compartment.

2,468,734
VARIABLE DELIVERY ROTARY PUMP
David O. Brant, Beverly Hills, Calif.
Application January 26, 1946, Serial No. 643,613
7 Claims. (Cl. 103—120)



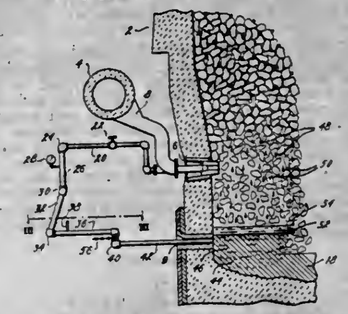
1. In a variable delivery pump, a casing having radial intake and discharge ports, said casing being open at one end only, a rotor mounted within said casing and having a drive shaft extending axially therefrom through the open end of the casing, an end closure for said casing mounted to rotate concentrically about said shaft, said closure engaging and being rotatable with relation to the open end of the casing about a center eccentric to the axis of the shaft, whereby turning of the closure enables selective eccentric adjustment of the casing relative to the rotor.

2,468,735
THERMOSTAT CONTROLLED MEANS FOR MAINTAINING DUAL TEMPERATURE IN MOTORS
Jacob Z. Brubaker, Manheim, Pa.
Application August 18, 1945, Serial No. 611,302
4 Claims. (Cl. 123—178)



1. In a thermostatically controlled automatic dual temperature system for internal combustion engines, the combination of a cylinder head block having a water jacket, a cylinder head having a water jacket in communication with the said cylinder block water jacket, a radiator, a conduit extending from the cylinder head water jacket to the radiator and having a thermostatic valve therein, a continuously open conduit through which water from the water jacket of the cylinder block may flow into the conduit which leads from the cylinder head to the radiator, but subject to the control of the thermostatic valve, a conduit from the radiator to the adjacent end of the water jacket of the cylinder block, a continuous open conduit from the water jacket of the cylinder block communicating with the thermostat whereby the action of the thermostat controls and stops the flow of cooling liquid in said conduit.

2,468,736
SLOTTED CATHODE STRUCTURE
Benjamin J. Butler, West Roxbury, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 13, 1946, Serial No. 676,550
2 Claims. (Cl. 250—27.5)

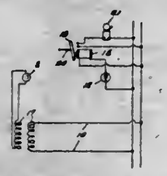


1. A cathode, comprising a hollow substantially cylindrical metal member having a plurality of substantially parallel slots in the surface thereof, said slots extending transversely to the axis of said member, said slots being arranged in a plurality of rows spaced longitudinally with respect to said axis with each row being constituted by a plurality of circumferentially-spaced slots, and a substantially stiff low resistance rod axially disposed within said hollow member and rigidly connected electrically and mechanically to one end thereof.

2,468,737
ELECTRICAL CONNECTING FIXTURE
Thomas McL. Davis, Washington, D. C.
Application April 7, 1945, Serial No. 587,200
4 Claims. (Cl. 174—35)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

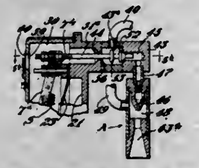
1. In high frequency radio apparatus comprising vacuum tube components and sockets therefor; the combination of, a main chassis member apertured to receive the vacuum tube sockets, a low impedance high frequency conducting channel plate mounted on said chassis and formed with apertures therein registering with corresponding apertures in said chassis, and conducting means for connecting predetermined terminals of said sockets to said channel plate.

2,468,738
METHOD OF BLOWING IN BLAST FURNACES
Walter W. Durfee and John P. Foley, Lorain, Ohio, assignors to National Tube Company, a corporation of New Jersey
Application January 15, 1947, Serial No. 722,174
4 Claims. (Cl. 75—41)



3. The method of blowing in a banked blast furnace comprising sealing the tuyères, lighting the furnace burden in the vicinity of the iron notch, blowing through the iron notch a substantial quantity of hot blast air enriched with an appreciable percentage of oxygen for a substantial length of time, thereupon unsealing tuyères in the vicinity of the iron notch and introducing substantial quantities of hot blast air therethrough, continuing the blast at the iron notch, such combined blowing operations being continued until a substantial quantity of molten iron is obtained on the hearth, discontinuing the iron notch blast, drawing off the molten iron, unsealing the remainder of the tuyères, and resuming normal operation by blowing blast gas through the tuyères.

2,468,739
CONDENSATION OF OLEFINIC COMPOUNDS WITH HYDROGEN SULFIDE
John L. Eaton, Trenton, and John B. Fenn, Riverview, Mich., assignors to Sharples Chemicals Inc., Philadelphia, Pa., a corporation of Delaware
No Drawing. Application December 30, 1943, Serial No. 516,244
8 Claims. (Cl. 260—609)

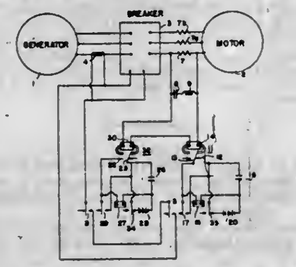


1. In the manufacture of mercaptans, the process comprising effecting contact in the fluid state at a temperature below 0° C. between a tertiary olefin having from 8 to 24 carbon atoms and a substantial proportion of hydrogen sulfide sufficient to condense with the olefinic compound to form a mercaptan as the principal resultant of the reaction, in the presence of as a catalyst at least one of the group consisting of boron fluoride, hydrogen fluoride, aluminum chloride and ferric chloride, the catalyst from the above-named group being the principal and essential catalytic constituent of the reaction mixture, and thereafter rendering the catalyst inactive by quenching the same with an aqueous quenching agent at a temperature below 0° C.

2,468,740
SMOKE ACTUATED FIRE ALARM
Walter J. Else, Everett, Wash.
Application December 11, 1946, Serial No. 715,441
2 Claims. (Cl. 177—311)

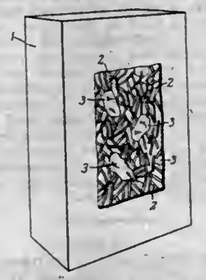
1. In a fire alarm device, the combination, with a pair of spaced holders, a light source carried by one holder, a photoelectric cell carried by the other holder, and an alarm in circuit with the light source and photoelectric cell and adapted to be actuated by smoke passing between the source and cell, of a means for permitting smoke to pass freely between the holders while yet preventing the passage of any solid matter, said means comprising a protective guard formed of open mesh screen wire material throughout, and secured at its ends to the respective holders and extended therebetween.

2,468,741
BREATHING APPARATUS
John H. Emerson, Cambridge, Mass.
Application December 12, 1944, Serial No. 567,806
18 Claims. (Cl. 128—29)



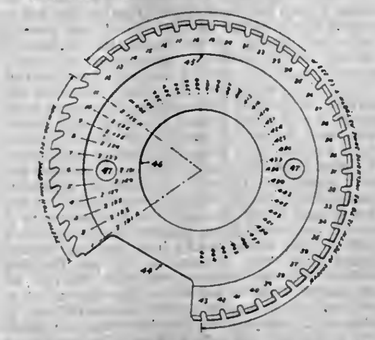
1. An artificial resuscitator of the kind which includes a face mask, a case which houses a pressure motor including a movable element which is sensitively responsive to lung pressure and which defines one wall of a motor chamber, a single, rigid tubular connection uniting the mask and case, said connection having a single constantly open passage affording communication between the interior of the mask and said motor chamber, an aspirator device within the case, said aspirator device having a nozzle and a delivery throat, a conduit leading to the interior of the case for supplying pressure fluid, the case also housing reciprocating valves and snap-action means for transmitting motion from said movable motor element to the valves, the resuscitator being of the kind wherein gas under pressure supplies the energy for inflating and for deflating the lungs and for operating the pressure motor, characterized in that the case which houses the aspirator, pressure motor, and motion-transmitting means is of a size such that it may be held in the palm of one hand, and means within the case defining flow passages controlled by the aforesaid valves, one of said passages being so arranged as to deliver gaseous medium from the source of supply directly to the motor chamber, and another passage being so arranged as to deliver gaseous medium from the source of supply to the inlet of the aspirator nozzle, the passages, valves and motion-transmitting mechanism being so constructed and arranged that during inhalation fluid medium flows through said motor chamber in one direction and during exhalation fluid medium flows through the motor chamber in the opposite direction.

2,468,742
BABY BATHER
Roland W. Faulhaber, Monroeville, Ohio, assignor, by mesne assignments, to C. W. Norton, Jr., Chicago, Ill.
Application December 15, 1945, Serial No. 635,367
7 Claims. (Cl. 155—189)



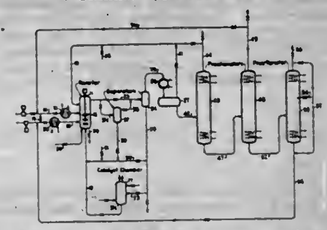
4. A safety cradle adapted to rest upon a substantially horizontal surface comprising a pair of relatively rigid frame members each frame member having a pair of longitudinally spaced foot portions joined by a generally U-shaped portion, a body engaging and supporting cross-member connected adjacent the central portion of said frame members, said cross-member serving to maintain said frame members in spaced relation, and body confining means cooperating with said cross-member to confine the occupant to the cradle.

2,468,743
PROTECTIVE SYSTEM
George E. Frost, Schenectady, N. Y.
Application January 15, 1946, Serial No. 641,367
12 Claims. (Cl. 318—447)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an electric system, a generator of alternating electromotive force, a utilization circuit including a dynamo electric machine connected to said generator to derive energy therefrom, a disconnecting device interposed in circuit relationship with said generator and said circuit, elements to open said disconnecting device on predetermined current flow therethrough to disconnect said generator and said circuit, and relay mechanism responsive to low frequency components of current flow through said device to block operation of said elements and prevent accidental opening of said device upon starting said machine.

2,468,744
PACKAGED FOOD COMPOSITION
Stephen L. Galvin, North Bergen, N. J., assignor to Continental Foods, Inc., Hoboken, N. J., a corporation of Illinois
Application April 24, 1945, Serial No. 589,956
3 Claims. (Cl. 99—171)



1. A packaged food composition adapted to make soup and comprising a soup base including amino acid material and carbohydrate material, said base having an initial moisture content not exceeding about 1.5 per cent by weight, another edible ingredient which is capable of accelerated drying by elevated temperature without deterioration and having its initial moisture content not exceeding about 8 per cent by weight to rob moisture from said soup base through the atmosphere within the package whenever its moisture content tends to exceed said critical value and a container enclosing said base and pre-dried ingredient and sealing them substantially moisture-tight from contact with the atmosphere.

2,468,745
BROACHING CUTTER
John C. Garand, Springfield, Mass.
Application September 23, 1944, Serial No. 555,566
3 Claims. (Cl. 29—95.1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A broaching cutter for producing undercut arcuate slots in a workpiece comprising a substantially circular body portion, said body portion having a peripheral opening arranged to permit insertion of a workpiece therein, a plurality of depth cutting teeth disposed in spaced relationship about the periphery of said body portion and transversely thereto, a first group of cutting teeth having each tooth successively greater radially displaced than the preceding cutting tooth and a successive group of said cutting teeth having cutting edges disposed on the sides thereof, each of said side cutting edges projecting outwardly with respect to said body portion to a greater extent than the preceding cutting edge.

2,468,746
PRODUCTION OF IMPROVED DIESEL ENGINE FUELS BY THE CATALYTIC ISOMERIZATION OF HIGH BOILING PARAFFINS
Bernard S. Greensfelder, Oakland, and Robert J. Moore, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application October 5, 1946, Serial No. 701,488
7 Claims. (Cl. 260—683.5)

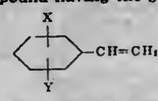
7. A process for the conversion of normally liquid straight and branched chain paraffins having at least ten carbon atoms to the molecule to branched and more highly branched paraffins respectively having the same molecular weight as said paraffins charged in the absence of any substantial hydrocarbon decomposition which comprises contacting said normally liquid paraffin hydrocarbons at a temperature of from about 20° C. to about 150° C. and in the presence of a hydrocarbon decomposition suppressor consisting essentially of a saturated cyclic hydrocarbon present in an amount at least equal by weight to said normally liquid paraffins with a preformed metal halide complex obtained by the interaction of a metal halide of the Friedel-Crafts type with an organic compound.

2,468,747
INTERPOLYMERS OF DRYING OILS, MONO-ALKENYL-AROMATIC HYDROCARBONS, AND DIVINYLBENZENE
Gerald A. Griess and Arthur S. Teot, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application June 25, 1947, Serial No. 757,064
11 Claims. (Cl. 260—23)

1. A method of making a clear varnish resin that is readily soluble in toluene which method comprises interpolymerizing in the substantial absence of solvents: (a) a drying oil having less than 35 per cent of its olefinic linkages conjugated, (b) a polymerizable mono-alkenyl-aromatic hydrocarbon material wherein each mono-alkenyl-aromatic component contains from 8 to 10 carbon atoms in the molecule and comprising styrene as its major component, and (c) divinylbenzene, the divinylbenzene and the mono-alkenyl-aromatic hydrocarbon material being employed in amounts corresponding to between 0.5

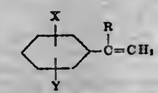
and 5 per cent and between 30 and 60 per cent, respectively, of the combined weight of the polymerizable organic components and the polymerization being carried out at temperatures between 100° and 200° C. to a point at which at least 80 per cent by weight of the alkenyl-aromatic compounds are reacted.

2,468,748



DRYING OIL-STYRENE INTERPOLYMERS

Gerald A. Griess and Arthur S. Teot, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware



No Drawing. Application September 26, 1947, Serial No. 776,400

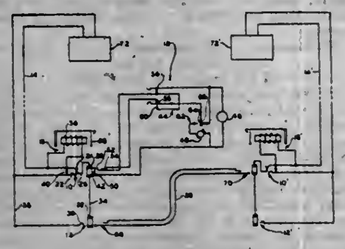
13 Claims. (Cl. 260—23)

1. In a method for making a varnish resin, the step of interpolymerizing from 30 to 90 parts by weight of drying oil, having an average degree of conjugation not greater than would correspond to 35 per cent of its total olefinic unsaturation, and from 70 to 10 parts of a mixture consisting of from 50 to 80 per cent by weight of a monovinyl aromatic compound having the general formula:

and from 50 to 20 per cent of an alpha-methylene alkyl aromatic compound having the general formula:

in which formulas X and Y each represents a member of the group consisting of hydrogen, halogens and lower alkyl radicals containing not more than three carbon atoms and R represents an alkyl radical containing not more than two carbon atoms, by heating the polymerization mixture at temperatures between 120° C. and 300° C.

2,468,749



TELEPHONE SWITCHBOARD SYSTEM

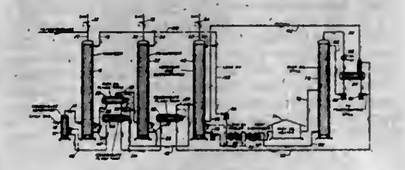
Bernard C. Groh, Orange, N. J., assignor to the United States of America as represented by the Secretary of War

Application November 8, 1945, Serial No. 627,082

2 Claims. (Cl. 179—51)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A telephone switchboard system comprising means terminating a plurality of telephone lines, means whereby a signal impressed on one of said lines may be evidenced at the switchboard, an operator's set adapted to be connected to said line whereby communication may be had through a switchboard operator to the said line, means whereby a second line may be connected to the first named line through said operator's set, ringing means integral with said operator's set whereby a signal may be impressed on said second named line, said ringing means comprising a generator connected across said second named line through a normally-open switch, said generator including means whereby the said switch will close when the generator is operated, whereby operation of said generator will impress a ringing signal on said second named line, and the said operator's set further including ringback key means whereby the said generator may be placed across said first named line in order to ringback said first named line.



2,468,750

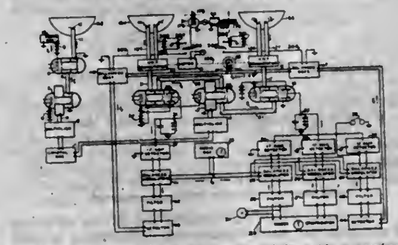
METHOD OF SEPARATING HYDROCARBONS

George Louis Gudenrath, Houston, Tex., assignor to Hudson Engineering Corporation, Houston, Tex., a corporation of Texas

Application May 12, 1945, Serial No. 593,490

4 Claims. (Cl. 196—8)

1. The method of separating C_2 and higher hydrocarbons from high pressure gas comprising separating a condensate by retrograde condensation from the gas, passing the uncondensed gas into the bottom of an absorption tower and upwardly through an absorption oil passing down through the tower, removing substantially only C_1 hydrocarbon from the top of the tower, removing a rich oil from the bottom of the tower, reducing the pressure on the rich oil and passing it into the bottom of an absorption section of a second tower, passing absorption oil downwardly through the second tower to join the rich oil from the first absorption tower, passing the resulting mixture of absorption oils downwardly through a stripping section of the second tower, introducing near the bottom of the stripping section hydrocarbon vapors composed principally of C_2 and higher hydrocarbons and passing the vapors upwardly through the tower, removing substantially only C_1 hydrocarbon from the top of the second tower, flashing the condensate with pressure reduction down to the pressure existing in the second absorption tower, passing vapors released from the condensate by the flashing operation into the second tower with the rich oil from the first tower, removing the rich oil mixture from the stripping section and distilling it to recover C_2 and higher hydrocarbons overhead, partially condensing said overhead to produce a distillate and a lower boiling point vaporous fraction, passing said vaporous fraction into contact with the flashed unvaporized condensate to displace low boiling hydrocarbons therefrom and to obtain said vapors composed principally of C_2 and higher hydrocarbons which are introduced into the stripping section of the second tower.



2,468,751

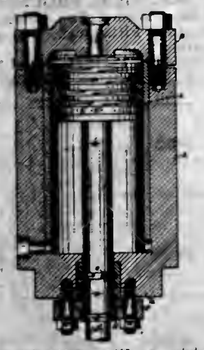
OBJECT DETECTING AND LOCATING SYSTEM

William W. Hansen, Garden City, and Russell H. Varian, Bellmore, N. Y., assignors to The Sperry Corporation, a corporation of Delaware

Application January 14, 1942, Serial No. 426,986

12 Claims. (Cl. 343—7)

2. In an object detecting and locating system, directive radiator means adapted to project electromagnetic energy at an object, receiver means having partially overlapping lobes of reception, said receiver means serving to receive some energy directly from said radiator means and some as reflected from the object and serving to detect any difference frequency, and servo means responsive to said difference frequency for orientating said receiver means to maintain a detected object substantially on the bisector of the angle extending between the axes of symmetry of said lobes of reception.



2,468,752

PISTON ROD PACKING

August H. Heinrich, Euclid, Ohio, assignor to Auto Diesel Piston Ring Company, Cleveland, Ohio, a corporation of Ohio

Application February 25, 1946, Serial No. 649,894

5 Claims. (Cl. 286—20)

1. The combination with a piston rod and means providing an annular groove surrounding the rod and a composite packing ring occupying the groove and tending to contract about the rod, said composite ring comprising two interlocking members each nearly completely annular but having a gap, each member extending through the other at the gap so that each member lies above the other in the one region and below the other in another region, the mating surfaces of the two rings being circumferentially inclined in opposite directions.

2,468,753

BLEACHING OILS AND FATS

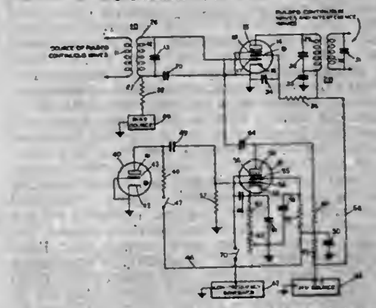
Lloyd F. Henderson, Reading, and Louis H. Libby, Boston, Mass., assignors to Lever Brothers Company, Cambridge, Mass., a corporation of Maine

No Drawing. Application May 15, 1945, Serial No. 593,960

19 Claims. (Cl. 260—423)

1. A process of bleaching dark colored oil and fat stocks, which comprises treating said stock with an acidic phosphoric compound selected from the group consisting of orthophosphoric acid, pyrophosphoric acid and acidic salts thereof, and oxygen in the presence of a silicate radical containing inhibitor.

2,468,754



DISCHARGE WAVE GENERATOR

Donald L. Hings, Ottawa, Ontario, Canada, assignor, by mesne assignments, to Cornell-Dubilier Electric Corporation, South Plainfield, N. J., a corporation of Delaware

Application August 6, 1945, Serial No. 609,259

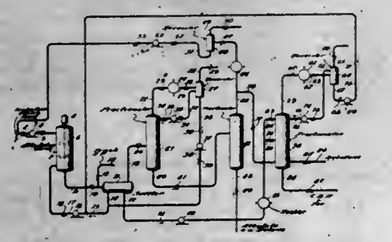
In Canada July 20, 1945

6 Claims. (Cl. 332—64)

1. In combination, an amplifier-modulator for amplifying pulsed continuous waves having off and on periods producing alternating spacer and marker intervals, a gaseous-discharge wave generator for producing high frequency discharge-waves, a load responsive to said discharge-waves connected to said amplifier-modulator, and means for injecting the high-frequency discharge-waves into the said amplifier-modulator for producing in said load said high-frequency discharge-waves at least during the spacer intervals.

2,468,755

FATTY ACID AMINE SALT COMPOSITION



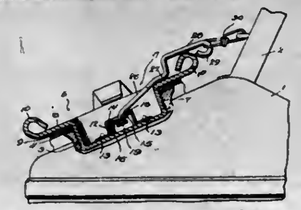
Charles W. Hoerr, Chicago, Ill., assignor to Armour and Company, Chicago, Ill., a corporation of Illinois

No Drawing. Application May 14, 1947, Serial No. 748,119

12 Claims. (Cl. 252—61)

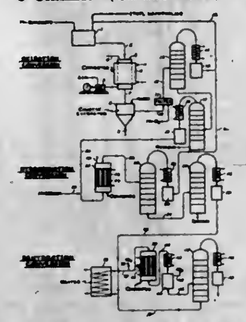
1. An aqueous fluid composition comprising a solution of a brine having the formula A_xB_y, where A is an element selected from the group consisting of the alkali metals and alkali earth metals, B is an acid ion, and x and y are small whole numbers, and a salt of a fatty acid amine containing at least 10 carbon atoms with an acid selected from the group consisting of inorganic acids and organic acids having not more than 6 carbon atoms, said brine solution being from 25% to 70% saturated and said amine salt being in a concentration of from 3% to 15%.

2,468,756
HYDROGEN FLUORIDE RECOVERY PROCESS
John O. Iverson, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application March 24, 1944, Serial No. 527,916
10 Claims. (Cl. 260—683.4)



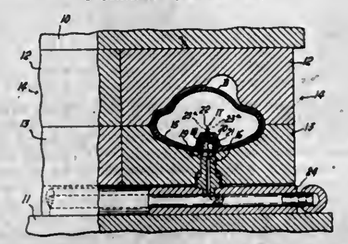
1. A process for the regeneration of a contaminated hydrogen fluoride catalyst containing water and relatively heavy organic material which comprises introducing said contaminated catalyst into the upper portion of a fractionating column, introducing preheated light hydrocarbon vapors into the lower portion of said fractionating column at a temperature sufficient to decompose organic fluorine compounds contained in said organic material and to vaporize hydrogen fluoride therefrom, passing said light hydrocarbon vapors upwardly in countercurrent contact with said contaminated catalyst, simultaneously stripping hydrogen fluoride vapors from said water and said heavy organic material by the upwardly flowing light hydrocarbon vapors, removing overhead from said column said light hydrocarbon vapors and substantially anhydrous hydrogen fluoride vapors, and withdrawing from the bottom of said column a liquid mixture of said heavy organic material, hydrogen fluoride, and water.

2,468,757
CLOSURE CAP TURNING MEANS
William B. Johnson, United States Army, Easley, S. C.
Application October 11, 1944, Serial No. 558,235
2 Claims. (Cl. 220—39)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



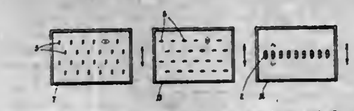
1. A rotary cap for closing the filling aperture of a container, comprising a circular plug-like body portion including a circular peripheral planar flange and a plurality of lugs integrally formed with the outer periphery of said circular planar flange and spaced substantially equidistantly from each other, each of said lugs extending outwardly for a substantial distance and upwardly from the outer periphery of said flange and doubling back on itself to form a loop providing a relatively large manually engageable contact plane extending substantially radially of said flange to provide leverage and facilitate manual application and removal of said cap.

2,468,758
RETAINING MEANS FOR CLOSURE CAPS
William B. Johnson, United States Army, Easley, S. C.
Application October 11, 1944, Serial No. 558,236
2 Claims. (Cl. 220—38.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A closure cap for sealing the filling opening of a container, said closure cap comprising a body portion, one side of said body portion being adapted to engage said filling opening, a housing carried by the opposite side of said body portion, said housing having a circular central aperture, and the annular wall forming said aperture being turned downwardly and terminating in spaced relation to said body portion, and forming an annular flanged bearing surface, a retaining link pivotally connected to said housing through said aperture, said retaining link having an enlarged head positioned inside said housing, and said retaining link also having proximate said enlarged head a curved portion defining a turn substantially a quadrant of a circle, said head and said curved portion of said link contacting said flanged bearing surface and permitting universal swiveling movement of said link relative to said housing.

2,468,759
CHEMICAL PROCESS
Robert Johnson, Verona, Pa., assignor to Koppers Company, Inc., Pittsburgh, Pa., a corporation of Delaware
Application July 13, 1945, Serial No. 604,806
5 Claims. (Cl. 260—669)



1. In a process for the manufacture of vinyl naphthalene the steps of acting upon ethyl naphthalene with oxygen in the presence of an oxidation catalyst at a reactive temperature below that at which substantial dehydration of methyl naphthyl carbinol occurs thereby to obtain a mixture of methyl naphthyl carbinol and methyl naphthyl ketone, acting upon the thus obtained mixture of methyl naphthyl carbinol and methyl naphthyl ketone with hydrogen in the presence of a hydrogenation catalyst at a reactive temperature below that at which substantial dehydration of methyl naphthyl carbinol occurs in order to reduce the methyl naphthyl ketone in the mixture to methyl naphthyl carbinol, and thereafter heating the methyl naphthyl carbinol as required to dehydrate it to vinyl naphthalene.

2,468,760
APPARATUS FOR PRODUCING HOLLOW RUBBER ARTICLES
David C. Kempthorn, Akron, Ohio, assignor to The Sun Rubber Company, Barberton, Ohio, a corporation of Ohio
Original applications July 15, 1942, Serial No. 450,954, and March 31, 1944, Serial No. 528,880. Divided and this application November 26, 1945, Serial No. 631,368
3 Claims. (Cl. 18—35)

3. Apparatus for manufacturing a noise-making article of the character described, comprising a sectional cavity mold, a pin projecting inwardly of the surface of the mold cavity, said pin having thereon an enlargement in spaced relation to the surface of the mold cavity and a second enlarged portion in spaced relation to the first-mentioned enlarged portion, means for applying pressure to unvulcanized rubber or like vulcanizable stock received in the mold cavity under heat of vulcanization, thereby to form the stock about said pin and said spaced enlargements thereof.

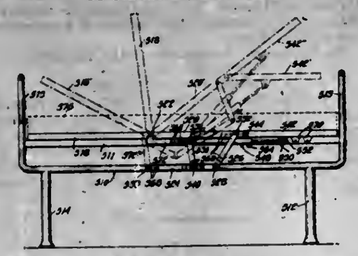
2,468,761
METHOD OF GROWING P-TYPE SEED CRYSTALS
Bengt R. F. Kjellgren, University Heights, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Application July 5, 1946, Serial No. 681,505
9 Claims. (Cl. 171—327)

1. The method of growing seed crystals of a P-type substance which comprises the steps of providing artificial seed bodies severed from crystal growth of the said substance and having major faces extending transversely of the Z axis of the crystal growth; planting the seed bodies in a solution of the said substance conditioned to permit supersaturation of the solution to a higher degree without starting spurious crystallization than is possible without such conditioning; and causing a flow of the solution relative to the seed bodies in a direction about perpendicular to the Z axis of the seed bodies while progressively lowering the temperature of the solution until growth of at least some of the seed bodies to a superficially sound crystal form typical of the said P-type substance is effected.

2,468,762
ACYLATION OF AROMATIC ALKOXY COMPOUNDS
Alvin I. Kosak, Columbus, Ohio, and Howard D. Hartough, Pitman, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application May 14, 1946, Serial No. 669,581
17 Claims. (Cl. 260—592)

1. A process for acylating phenyl alkyl ethers, comprising reacting the same with an acylating agent selected from the group consisting of acyl halides of carboxylic acids and anhydrides of carboxylic acids in the presence of a small amount not more than about 3 percent by weight of iodine.

2,468,763
BICYCLE STAND
Amaury J. Landry, San Francisco, Calif.
Application August 29, 1947, Serial No. 771,359
3 Claims. (Cl. 280—293)

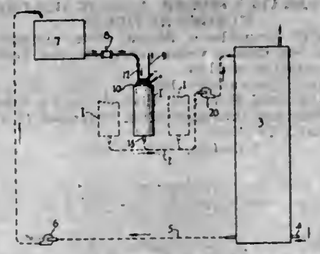


3. In combination with a bicycle, a stand for supporting the same, comprising a frame positioned beneath and against the crank arm bracket of the bicycle, means for removably securing the said stand frame to the frame of the bicycle, a leg pivotally secured to the stand frame, a coil spring for actuating the said leg, means for retaining the leg in an upright position, whereby the bicycle is supported, the said leg retaining means including a stop integral with the stand frame and a latch pivotally secured to and slidably supported in the stand frame, the said latch being resiliently controlled by the said spring that actuates the leg, a lever on the lower portion of the said latch extending beyond the said frame, the said lever being adapted to be abutted by a crank arm of the bicycle, when the bicycle is ridden, whereby the latch is moved inwardly and the leg is free to move to its inoperative position, and a stop for limiting the movement of the leg to define its inoperative position.

2,468,764
METHOD FOR DEHYDRATING AMYL ALCOHOLS
Pierre Alfred Laurent, Paris, France; vested in the Attorney General of the United States
No Drawing. Application June 6, 1945, Serial No. 597,942. In France May 28, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires May 28, 1961
3 Claims. (Cl. 260—682)

1. A method of making a mixture of amylenes rich in isopropylethylene and adapted to be polymerized to produce a lubricant, which comprises dehydrating isoamyl alcohols boiling from about

129° C. to 131° C. in the presence of an alumina catalyst by passing the vapors of the alcohol into contact with the catalyst at a temperature between 330° C. and 370° C. to produce a mixture of amylenes containing a major proportion of isopropylethylene.



2,468,765
ADJUSTABLE BED FRAME
Anton Lorenz, Buffalo, N. Y.
Application October 11, 1944, Serial No. 558,241
14 Claims. (Cl. 5—69)

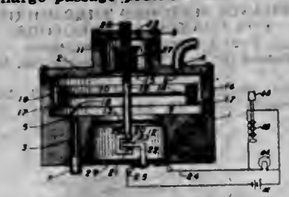
5. A bed unit, comprising: a support including longitudinal rails, a head-section, a central seat-section comprising a stationary portion and a portion movable relative thereto, a foot-section, said stationary seat-portion being rigidly maintained on said support, said head-section being pivoted to one end of the stationary portion of said central seat-section, said foot section being connected to one end of the movable portion of said central seat-section, said head-section, central seat-section and foot-section forming an articulated bed-bottom normally resting on said longitudinal rails in a substantially horizontal position with the sections substantially in alignment with each other, an extension arranged on said head-section, said extension projecting from said head-section beyond its pivotal connection with the central seat-section, a pair of connecting links including a first connecting link and a second lower connecting link normally arranged below the plane of said central seat-section, the upper end of said first connecting link being pivoted to the end portion of said movable seat portion adjoining the foot-section, the lower end of said first connecting link being pivoted to one end of said lower connecting link, a guiding link, the upper end of said guiding link being pivoted to said support at a point above the plane of said lower connecting link, the lower end of said guiding link being pivoted to a connecting link of said pair of connecting links, the other end of said lower connecting link being arranged for engagement with said extension of the head-section when the latter is swung into an elevated position, and means for a temporary pivotal connection between said other end of the lower connecting link and said extension of the head-section.

2,468,766
RECOVERY OF CHLORINE FROM HYDROGEN CHLORIDE
Frank S. Low, Bronxville, N. Y., assignor to Food Machinery and Chemical Corporation, New York, N. Y., a corporation of Delaware
Application April 7, 1944, Serial No. 529,926
2 Claims. (Cl. 204—128)

1. In an electrolytic process for the recovery of chlorine values from hydrogen chloride in an electrolytic cell having a resistant anode and a porous cathode, the process comprising the steps of introducing a polyvalent reducible metal chloride aqueous solution containing from about 5 to 25% hydrogen chloride and from about 5 to 17% of reducible metal chloride into said cell, electrolyzing the polyvalent metal chloride from a higher state of valence to a lower state of valence at a substantially uniform current density across a substantially uniform electrolytic gap formed between the anode and cathode in said cell, withdrawing chlorine from the space between

the anode and cathode of said cell, withdrawing the partially reduced electrolyte from the cell only through the electrolytically active portion of the porous cathode which forms one wall of said cell, contacting the withdrawn aqueous solution containing hydrogen chloride with oxygen to re-oxidize the polyvalent metal chloride to said higher state of valence and produce water, returning the obtained solution to the space between the anode and cathode of said cell, and maintaining the hydrochloric acid content and polyvalent metal chloride content of said electrolyte as fed to the cell substantially constant.

2,468,767
FILM REEL CONSTRUCTION
Whitten P. Lloyd, Chicago, Ill., assignor to Excel Movie Products, Inc., Chicago, Ill., a corporation of Illinois
Application April 15, 1946, Serial No. 662,257
6 Claims. (Cl. 242—74)



1. A film reel comprising a pair of substantially identical complemental members, each having a flange and hub portion, a tab struck out of one of said members and extending substantially across the width of the reel, the complemental member having a radial slot connecting with a slot in said tab, the said slots being arranged to receive a film laterally and to deform the terminal portion of the film substantially in an ogee curve to secure the same for winding on the reel.

2,468,768
MEANS TO INDICATE THE PRESENCE OF VAPOR IN FLUID CONDUIT SYSTEMS
Emil A. Malick, United States Navy
Application March 23, 1945, Serial No. 584,481
8 Claims. (Cl. 177—311)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

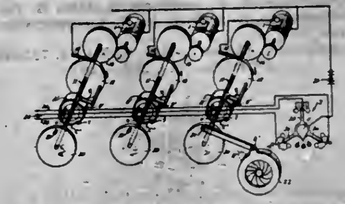
6. A device for indicating the presence of a mixture of vapor and liquid in a fluid conduit comprising a housing connected to said conduit

for fluid flow therefrom, a pair of chambers in said housing adapted to receive the fluid under pressure in sequential flow, a flexible diaphragm forming a common wall between said chambers, conduit means provided with restrictive orifices interposed between the two chambers adapted to create a pressure differential therebetween when the fluid is in motion, an inlet passage in said housing connected to one of the chambers, a discharge passage provided with a restrictive

orifice connected to the other chamber adapted to discharge liquid at or near its critical velocity and to thereby create a greater pressure differential between said chambers when a mixture of vapor and liquid passes through said last named orifice and means responsive to the movement of the diaphragm under said greater pressure differential adapted to indicate the presence of said mixture.

2,468,769
ADDUCTS OF UNSATURATED ACIDS WITH CYCLIC POLYMERS OF HEXADIENES AND PROCESSES FOR THEIR PRODUCTION AND UTILIZATION
Rupert C. Morris and John L. Van Winkle, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application November 9, 1944, Serial No. 562,743
12 Claims. (Cl. 260—342.4)

1. A process comprising bringing a compound selected from the group consisting of alpha,beta-unsaturated - alpha,beta - dicarboxylic aliphatic acids and anhydrides, salts and esters of said acids into reactive engagement at a temperature between 175° and 300° C. with a low molecular weight unsaturated cyclic polymer of a branch-chain 1,3-hexadiene having a straight chain of 5 carbon atoms in the molecule.



2,468,770
ROSIN-STYRENE INTERPOLYMERS
Earl D. Morris and Gerald A. Griess, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application March 1, 1946, Serial No. 651,378
7 Claims. (Cl. 260—23)

1. The interpolymer of (1) from 20 to 80 percent by weight of rosin and (2) from 80 to 20 percent of a mixture of a polymerizable nuclear monovinyl aromatic compound and a nuclear alpha-methylene-lower alkyl aromatic compound wherein the alpha-methylene-lower alkyl group contains from 3 to 4 carbon atoms in which the said monovinyl compound represents from 50 to 80 percent by weight of such mixture, the interpolymer having been prepared by heating the components together at a temperature above 150° C. but not exceeding the refluxing temperature of the polymerizing mass.

2,468,771
PROCESS OF PREPARING FIBERS AND YARNS
Ralph E. Montonna and Lloyd H. Reyerson, St. Paul, and Elias Amdur, Minneapolis, Minn., assignors to Regents of the University of Minnesota, Minneapolis, Minn., a corporation of Minnesota
No Drawing. Application April 3, 1944, Serial No. 529,426
7 Claims. (Cl. 57—164)

1. The process of preparing fine linen yarns from mature, dry flax straw which comprises decorticating the straw to free the bast fibers from the shivey material and forming a roving of the bast fibers so separated, winding the roving on perforated bobbins, washing the roving with water for about five minutes at 100° C. by forcing the water through the roving on the bobbin, rinsing the roving in cool water and then draining it, then treating the roving with an oxidizing solution prepared by using .05 pound of sodium chlorite and .05 pound of acetic acid and 10 pounds of water for each pound of roving, dry weight, said oxidizing solution being pumped through the roving for about fifteen minutes while maintaining the temperature of the solution at about 95° C., rinsing the roving in plain cold water, treating the roving with about 10 pounds of approximately 1% sodium hydroxide solution by pumping the same through the roving for about one-half hour while maintaining the temperature at about 95° C. and then after rinsing the roving in cold water and while the roving is still wet, drafting and spinning the roving into linen yarn.

2,468,772
MULTIPLE LIMIT SWITCH DEVICE
William Mungall, Dayton, Ohio
Application April 23, 1945, Serial No. 589,836
4 Claims. (Cl. 318—467)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An electric motor-operated device comprising a plurality of separately rotatable units all adapted to have rotation arrested at the same selected one of a plurality of positions, each unit comprising a rotatable member and a nonrotatable cylinder coaxial with said rotatable member, the cylinder of each unit carrying a series of cylindrically positioned insulatedly spaced conductive segments, like segments of the cylinders of the several units being electrically joined together, a brush holder for each unit supported on and rotatable in unison with the rotatable member of said unit, a brush carried by each brush holder in continuous engagement upon rotation of the rotatable member of the unit with one after the other of the segments of the unit, a source of electrical energy, an electric motor for each unit having its windings electrically connected between the brush of the unit and one terminal of said source of electrical energy, a control switch

for all of the units, said control switch comprising a number of insulatedly spaced stationary contacts at least one being electrically connected to each conductive segment of a unit, and a movable conductive switch member electrically connected to the other terminal of the source of electrical energy and adapted to make electrical connection at the same time to all except any selected one of the stationary contacts of said control switch.

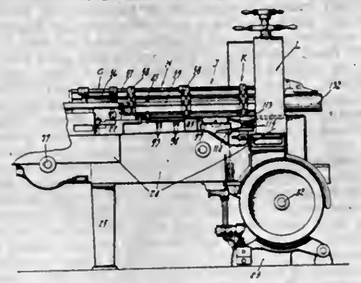
2,468,773
ILLUMINATING DEVICE
Joseph J. Musinski, Burbank, Calif.
Application November 7, 1945, Serial No. 627,259
10 Claims. (Cl. 240—10)

1. In an illuminating device, the combination which comprises a spiral flexible member capable of being collapsed axially into substantially flat form, a plurality of electrical light sockets fastened at spaced intervals along the spiral member, and at least one electrical conductor extending along the spiral member and electrically connected with the holders.

2,468,774
ELECTRICAL CIRCUIT BREAKER
Joseph F. O'Brien, Lebanon, and John B. Cataldo, Annandale, N. J., assignors to John B. Pierce Foundation, New York, N. Y., a corporation of New York
Application March 4, 1947, Serial No. 732,308
4 Claims. (Cl. 200—116)

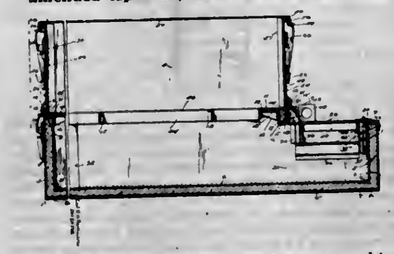
1. In an electrical circuit breaker, throw means carrying an electric contact; movable supporting means carrying a second electric contact for make and break with said first contact; latch means normally maintaining said throw means in fixed position relative to said supporting means so that the said contacts are closed; resilient means operative to actuate said throw means in a direction away from said second contact; thermostatic means responsive to electrical overload for positively tripping said latch means, said means being disposed in the electric circuit governed by said contacts, and being effective to release said latch means upon a given condition of electrical overload in said circuit; a push button asscciated with said throw means and serving as a limit stop therefor in its thrown position so that pressing of said push button will re-set said throw means in its normal latched position; and means mechanically connecting said push button with said movable supporting means so that pressing of the push button will move said second contact out of range of the first.

2,468,775
IMPEDANCE MATCHED THERMOCOUPLE FOR COAXIAL CONDUCTORS
Paul J. Ovrebo, Dayton, Ohio
Application October 25, 1944, Serial No. 560,293
2 Claims. (Cl. 136—4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a coaxial electrical conductor, an outer conductor threaded at its opposite ends to engage with coaxial line coupling elements, an inner conductor centrally disposed within the bore of said outer conductor, said inner conductor having contact members axially aligned and in spaced relation, dielectric spacer means concentrically retaining said inner conductor within the outer conductor and being threadedly assembled to said inner conductor to facilitate assembly and disassembly of the inner conductor with respect to the outer conductor, and a plurality of parallel, circumferentially-spaced thermocouples connected between said contact members to form a linear section of said inner conductor whereby said inner conductor has a small thermal capacity mass for thermocouple current measuring and a correct impedance virtual mass to match the impedance of the coaxial conductor of which it forms a part.

2,468,776
CUTTER ASSEMBLY FOR ROTARY PLOWS
Louis L. Patterson, Los Angeles, Calif.
Application December 17, 1946, Serial No. 716,733
11 Claims. (Cl. 97—219)



1. In a power driven plow, a rotatable shaft structure mounted in an adjacent overlying relation to the ground for being power driven, and a plurality of plow blades fixed to and spirally surrounding said shaft structure, said blades being divided into groups wherein the blades of each group are intercoiled and with adjacent groups occupying different sections of the length of said shaft structure, the blades of one group where the groups meet having at one end of each group a leading end portion which is fastened to the corresponding leading end portion of the adjacent end blade of the other of the two meeting groups.

2,468,777
CAN BODY MAKING MACHINE
John F. Peters, Leonia, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application December 8, 1943, Serial No. 513,428
7 Claims. (Cl. 93—52)

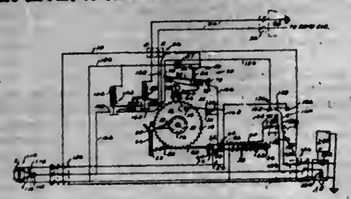
1. In a machine for making tubular fibre container bodies having marginal edge portions embodied in an adhesively secured side seam, the combination of means for preheating a marginal edge portion of a partially formed tubular container body, means for preheating the opposite marginal edge portions of said tubular body, means for applying a film of liquid thermoplastic adhesive onto one of said preheated edge portions of the body, means for bringing the adjacent marginal edge portions of said body together in overlapping relation with the adhesive interposed therebetween for bonding said edge portions into a side seam to produce a completed tubular container body, means for longitudinally advancing said body during and between all of the described operations, and means for holding one of said container marginal edge portions against transverse movement during said longitudinal advancement of the container body for the described operations thereon.

2,468,778
COOKING EQUIPMENT
Carl C. H. Rasmussen, Silver Spring, Md.
Application March 24, 1945, Serial No. 584,681
7 Claims. (Cl. 126—25)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a portable gaseous fuel burning cooking stove the combination comprising a heating compartment having thermally insulating bottom and side walls and an open top, means for supporting cooking utensils on said open top in position to cover the same, an auxiliary compartment projecting from and communicating with one end of said heating compartment, said last compartment having thermally insulating bottom and side walls and an apertured top, a baffle extending into said auxiliary and heating compartments, said baffle dividing said auxiliary compartment into a fire-box for housing a gaseous fuel burner insertable into said auxiliary compartment through said apertured top and into a smoke-box forming an exit for the gases of combustion, and said baffle dividing said heating compartment into two longitudinal passageways for hot gases of combustion from said fire-box to said smoke-box through said heating compartment, said passageways communicating with each other proximate the other end of said heating compartment, and one of said passageways communicating with said fire-box projecting from said heating compartment and the other passageway communicating with the smoke-box projecting from heating compartment, whereby a circuitous path for said hot gases beneath substantially the entire area of said open top is defined.

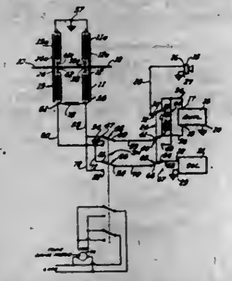
2,468,779
PRINTING INKS
Charles A. Rietz, Park Ridge, and Raymond F. Lecture, Chicago, Ill., assignors to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application April 28, 1945, Serial No. 590,952
2 Claims. (Cl. 260—33.2)

1. A typographic printing ink characterized by its ability to be set by the application of water to the film and by its stability at high humidities, which comprises pigment dispersed in a vehicle containing as binder a resinous glycerol ester of endo methylene tetrahydro-phthalic acid dissolved in a liquid water-soluble solvent of the group consisting of polyglycols and their monoethers.



2,468,780
BOTTLE ATTACHMENT
John Rifen, Brainerd, Minn.
Application July 13, 1946, Serial No. 683,555
6 Claims. (Cl. 215—38)

5. A bottle carrier comprising in combination a body disposable upon the beaded lip of a bottle, depending lip underlying sides carried by said body, a carrying handle having horizontal pivot means inwardly of one end of said handle and pivoting same to said body, and a lip-engaging stop provided by said handle end outwardly of said pivot means, said stop being actuated to lip-engaging position when the handle is grasped to lift an attached bottle.



2,468,781
CAMERA CONTROL FOR BOMBARDMENT AIRCRAFT
Henry P. Roganti, Dayton, Ohio
Application August 14, 1946, Serial No. 690,431
8 Claims. (Cl. 161—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)
8. In a device for bombardment aircraft having a pulsating bomb release circuit, said device

comprising an aerial camera, an intervalometer for operating said camera at selected intervals, a counter adapted to be manually set to stop said intervalometer after the selected number of intervals has elapsed, electromagnetic means for operating said counter, switch means closable by operation of the first pulsation in the bomb release circuit to cause said electromagnetic means

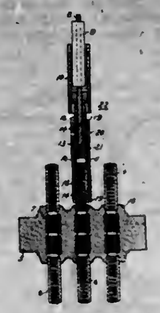
to operate said counter through the first interval, switch means closable by operation of said counter through the first interval to cause said electromagnet to maintain operation of said counter through succeeding intervals, and switch means to prevent energization of said electromagnet to stop said counter when the selected number of intervals has elapsed.

2,468,782
INTERCHANGEABLE MAGNETIC TRANSDUCER AND SWITCHING SYSTEM
Donald E. Ross, Eagle Rock, and Willard E. Stofer, North Hollywood, Calif., assignors to Herman S. Heller, Los Angeles, Calif.
Application September 11, 1946, Serial No. 696,148
9 Claims. (Cl. 179—100.2)

6. A magnetic recording device using a ferromagnetic tape having a plurality of laterally displaced recording lanes thereon as a record medium, and which includes: reversible means to drive said tape; a first electro-magnet having a core adapted to bear against said tape; a second electro-magnet having a core adapted to bear against said tape at a point laterally aligned and longitudinally displaced on said tape with respect to said first mentioned core; a transducer; an oscillator; an amplifier; means operable to reverse said tape driving means; switching means comprising a plurality of switch sections operated in synchronism with said reversing means, each of said sections having a movable contact and a first and second fixed contact; means connecting said first fixed contact of one of said switch sections to said first electro-magnet; means connecting said second fixed contact of said switch section to said second electro-magnet; a resistor; means connecting one terminal of said resistor to said first electro-magnet and the other terminal of said resistor to said second electro-magnet; means connecting said second fixed contact of a second of said switch sections to said first electro-magnet; means connecting said first fixed contact of said second switch section to said second electro-magnet; a record-reproduce switch means comprising a plurality of switch section each having a movable contact adapted to complete a circuit to either of a first and second fixed contact; means connecting said transducer to said movable contact of a first switch section; means connecting said first fixed contact of said first switch section to the input of said amplifier; means connecting said second fixed contact of said first switch section to said output of said amplifier; means connecting said second fixed contact of a second switch section to said input of said amplifier; means connecting said first fixed contact of said second switch section to said output of said amplifier; means connecting said movable contact of said second switch section of said record-reproduce switch means to said movable contact of said first switch section of said first mentioned switch means; means connecting a first fixed contact of a third switch section of said record-reproduce switch means to said oscillator; and means connecting said movable contact of said third switch section of said record-reproduce switch means to said movable contact of said second switch section of said first mentioned switch means.

2,468,783
METHOD AND MEANS FOR CONNECTING COAXIAL CABLES
Herman C. Schwartz, New Milford, N. J.
Application May 23, 1945, Serial No. 595,378
2 Claims. (Cl. 174—21)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A coupling device for joining transmission lines, comprising a sleeve for slidably receiving an end of a transmission line to be joined, the transmission line and said sleeve having aligned axial bores of substantially equal inner diameters, whereby smooth electrical continuity between said sleeve and the transmission line is ensured, an enlarged recess in each end of the sleeve terminating in a tapered shoulder, a clamping device threadingly engaged in said recess, a bearing ring abutting said clamping device and having a conical seating face, said tapered shoulder and bearing ring in cooperation with the transmission line defining an annular chamber in said recess, a resilient gas-impervious seal and a resilient electrically conducting gasket interposed in said chamber between the conical seat of said bearing ring and the tapered shoulder of said sleeve, whereby actuation of said clamping device expands both said resilient seal and said resilient gasket into tight mechanical and electrical engagement with said sleeve and said transmission line.



2,468,784
AUTOLOADING PISTOL
Hal E. Seagraves, Wilton, Conn.
Application September 2, 1944, Serial No. 552,456
4 Claims. (Cl. 89—195)

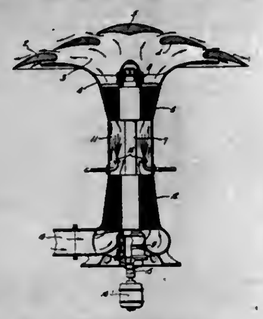
1. An autoloading pistol comprising a receiver, a barrel connected to the receiver, said barrel being oblong in vertical direction in cross-section, a grip member for the barrel and receiver having a space in the grip for a cartridge magazine, a breech bolt in the receiver, means for locking and unlocking the breech bolt in breech closing position with respect to the barrel, said means including a longitudinal space in the receiver and in the barrel above the bore extending from the rear of the receiver through the barrel, a part of the space in the barrel being a cylinder, a piston mounted in the cylinder, means extending rearwardly from and operatively connecting the piston to the breech bolt, a gas duct connecting the bore with the cylinder forward of the piston to admit gas from the bore to drive the piston rearwardly to unlock and move the breech bolt rearwardly and eject the empty case, and means for forcing the breech bolt and piston forwardly to locked breech closing position.

2,468,785
SCREWED SLEEVE ELECTRICAL CONNECTOR
William C. Sealey, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application February 7, 1944, Serial No. 521,307
4 Claims. (Cl. 173—328)

1. A connector comprising a conducting stud provided with an external thread on a portion thereof, a tubular terminal member provided with means integral therewith for receiving an electrical conductor internally of said terminal member in nondetachable electrical and mechanical connection therewith, said terminal member provided with an external thread on a portion thereof, said threads being oppositely directed, said terminal member threaded portion being provided with a reduced end portion wherein said conductor is fastened, whereby the fastening of said conductor is effected without disturbing the thread of said terminal member, a conductive sleeve member provided with portions having oppositely directed internal threads thereon, said oppositely threaded portions of said sleeve cooperable with said threaded portions on said stud and said terminal member, whereby relative simultaneous axial movement of said

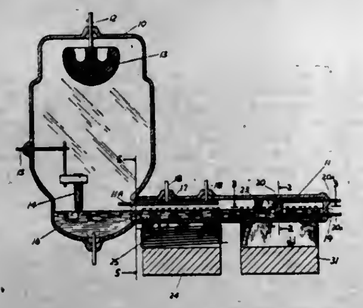
stud and said terminal member in opposite directions is obtained upon rotation of said sleeve.

2,468,786
ELECTROMAGNETIC CORE ASSEMBLY AND METHOD
William C. Sealey, Wauwatosa, and Frits W. Arend, West Allis, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application August 21, 1944, Serial No. 550,358
6 Claims. (Cl. 175—356)



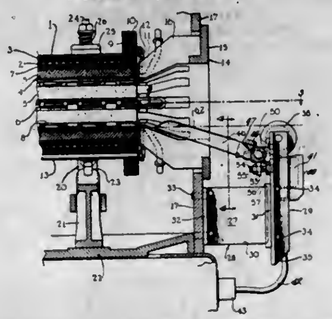
2. A core assembly of laminations of sheet metal extending substantially radially from a central member having a longitudinal axis, said core assembly comprising a plurality of sectors, certain of said sectors comprising a plurality of stacked packages of said laminations, adjacent said packages being non-uniformly spaced from said axis to define a series of steps, each said package comprising a stack of laminations which are at a substantially uniform distance from said axis and a single lamination extending to a smaller distance from said axis to define a protruding edge, said protruding edges lying substantially parallel to said axis, said edges resting on a common supporting lamination of an adjacent said sector, bonds of fused metal uniting certain of said packages with said supporting lamination at intermediate points of the lines of contact of said edges with said supporting lamination, and another bond of fused metal uniting said supporting lamination with said central member.

2,468,787
AERODYNAMIC IMPELLING DEVICE
John S. Sharpe, Haverford, Pa.; Catherine D. Sharpe executrix of said John S. Sharpe, deceased
Application September 9, 1943, Serial No. 501,708
3 Claims. (Cl. 253—36)



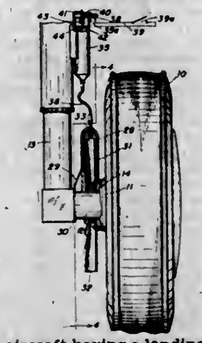
1. In an aerodynamic impelling device, means for producing a continual flow of expanding

gases, a structure forming a chamber for the reception of said gases, the wall of said chamber being formed in part by two immediately adjacent annular airfoils which are spaced from each other and from other portions of the chamber



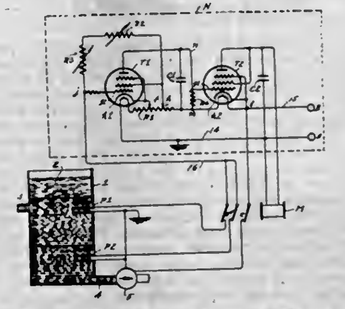
wall in a manner to provide for the release of said gases to produce an aerodynamic impelling force, one of said annular airfoils having a trailing edge of approximately the same length as the leading edge of the other of said annular airfoils.

2,468,788
ARC DISCHARGE DEVICE
Charles G. Smith, Medford, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application April 3, 1948, Serial No. 659,228
6 Claims. (Cl. 315—330)



1. An arc discharge device comprising: an envelope having an auxiliary portion extending substantially perpendicular to the axis thereof; an anode supported within said envelope; a liquid cathode disposed within said envelope; means for initiating an arc spot on the surface of said cathode; a perforate member disposed within the auxiliary portion of said envelope, parallel to the axis and perpendicular to the surface of said cathode; magnetic means disposed adjacent said perforate member; and means for energizing said magnetic means to urge said arc spot into the interstices of said perforate member, said perforate member having induced in the interstices thereof a magnetic field of sufficient magnitude to extinguish said arc spot.

2,468,789
STOCK GUIDE AND POWER CONTROL FOR ELECTRIC FURNACES
Harold A. Strickland, Jr., Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio
Application July 9, 1945, Serial No. 603,770
4 Claims. (Cl. 219—47)



1. Bar heating apparatus comprising in combination, an electrical heater provided with an opening for the insertion of a workpiece along the axis thereof, means for supplying heating current to said heater, a first guide for directing a workpiece along a travel axis to the opening of said heater, a second guide for directing the workpiece along said axis to said first guide and the heater, and a control element operatively associated with means for controlling supply of heating current to said heater mounted on the second guide and extending from one side toward said axis and in the path of a workpiece in the region of said first guide and said heater opening, said element being engaged by said workpiece when the workpiece is in heating position for actuating said last mentioned means and applying and maintaining heating current in said heater.

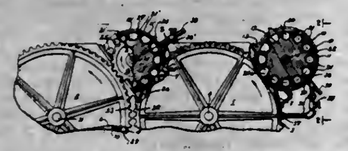
2,468,790
AIRCRAFT LANDING GEAR
Earle E. Suiter, United States Navy
Application September 24, 1945, Serial No. 618,379
4 Claims. (Cl. 244—103)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an aircraft having a landing wheel, means for prerotating the wheel comprising: fluid reaction means associated with said wheel; means containing an explosive charge connected to said fluid reaction means; and means for exploding said explosive charge including a firing pin adjacent said explosive charge, a resilient member urging said firing pin towards said explosive charge, a releasable latch preventing movement of said firing pin and an energizable solenoid for actuating the latch thereby permitting said firing pin to move under the influence of said resilient member for exploding the explosive charge whereby the gases resulting from the explosion will actuate said fluid reaction means to cause prerotation of the landing wheel.

2,468,791
CONDUCTIVITY CONTROL
E. Craig Thomson, Boston, Mass., assignor to Photoswitch, Incorporated, Cambridge, Mass., a corporation of Massachusetts
Application June 30, 1945, Serial No. 602,590
5 Claims. (Cl. 103—25)

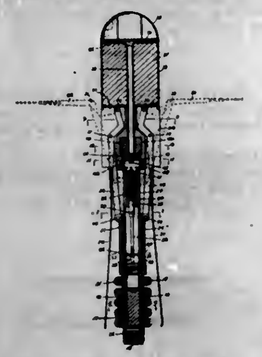
1. For a vessel wherein a desired fluid is allowed to settle out of a mixture of said desired fluid and a carrying fluid, a system for controlling the removal of said desired fluid from said vessel comprising: a first and a second probe device immersed in the mixture of fluids in said vessel at a first and a second level respectively, each probe device having at least a first and a second element adapted for measuring the impedance therebetween and consequently the conductivity and concentration of the fluids therebetween; a relay amplifier system having an output circuit containing an operator means and at least a first and a second input terminal adapted for connection to said probe devices, in order to use them as detecting impedances, said system being adapted to place said operator means in a first condition when the value of the detecting impedance across said input terminals is within a first predetermined range of values and to place said operator means in a second condition when the value of the detecting impedance across said input terminals is within a second predetermined range of values; means connecting said first elements of said probe devices to said first input terminal; pump means for removing fluid from said vessel from a point below said second level; and switch means actuated by said operator means adapted, during the period said operator means is in said first condition, to connect said second element of said first probe device to said second input terminal and to render said pump means inoperative and, during the period said operator means is in said second condition, to connect said second element of said second probe device to said second input terminal and to render said pump means operative; whereby, when the impedance measured by said first probe device is within said first predetermined range depending on the conductivity of the mixture of fluids surrounding said first probe, said operator means is placed in said second condition, said second probe device is substituted for said first probe device as the detecting impedance, and said pump is rendered operative and, when the impedance measured by said second probe device is within said second predetermined range depending on the conductivity of the mixture of fluids surrounding said second probe, said operator means is placed in said first condition, said first probe device is substituted for said second probe device as the detecting impedance, and said pump is rendered inoperative.

2,468,792
DRILLING FLUIDS AND METHODS OF USING SAME
Cary R. Wagner, Utica, Ohio, and William N. Axe, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application August 18, 1947, Serial No. 769,313
12 Claims. (Cl. 252—8.5)



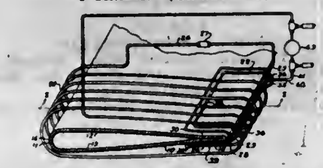
1. In a process of drilling wells comprising the steps of drilling the well with well drilling tools, and circulating through the well during said drilling a water base drilling mud which forms a filter cake on the wall of the well, the improvement comprising incorporating in said drilling mud a water soluble salt selected from the group consisting of sodium, potassium, lithium, ammonium, magnesium, calcium and strontium salts of an oxidized cellulose in an amount sufficient to reduce the water loss due to filtration through said filter cake but insufficient to increase the viscosity of said drilling mud to such an extent that it cannot be circulated, which oxidized cellulose is a reaction product of cellulose and nitrogen dioxide, said oxidized cellulose having a carboxyl content of between 5 and 25.56 per cent by weight.

2,468,793
HIGH-FREQUENCY RESISTOR
Hugh E. Webber, Hempstead, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Original application December 6, 1943, Serial No. 513,164. Divided and this application December 18, 1944, Serial No. 568,629
14 Claims. (Cl. 201—67)



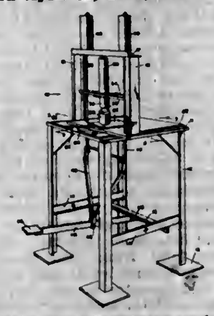
1. A power-absorbing wire unit for a microwave wattmeter, comprising an insulating tube, a power-absorbing wire therein extending longitudinally thereof, a conducting end plate electrically connected to one end of the wire, and a conducting tube extending longitudinally from the opposite end of the insulating tube and electrically connected to the other end of the wire, whereby the unit has a flat terminal at one end and an extending pin terminal at the other end.

2,468,794
VENTED COOKER VALVE
Paul C. Wilbur, San Jose, Calif., assignor to Food Machinery and Chemical Corporation, a corporation of Delaware
Application May 14, 1946, Serial No. 669,727
3 Claims. (Cl. 196—211)



3. A valve for a pressure treating chamber comprising a housing having an inlet and an outlet opening, one communicating with the interior of said chamber and the other communicating with the exterior of said chamber, a rotary turret in said housing having a pocket for receiving an article at one of said openings and for discharging the article at the other of said openings, said valve having means intermediate said housing and turret for sealing the pocket therein during its movement between said openings, means for injecting a charge of pressure treating medium into said pocket as it approaches communication with the interior of said chamber and for simultaneously venting said pocket for ejecting air therefrom prior to communication of the pocket with said chamber.

2,468,795
FLARE
Starling Winters, Englewood, N. J.
Application October 11, 1944, Serial No. 558,231
3 Claims. (Cl. 102—37.1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An aerial device comprising a cylindrical flare body surmounting a cylindrical flare motor body, propeller blades pivoted on said flare motor body and foldable within the extremities of said flare motor body, resilient means constantly urging said blades to open position transversely to the longitudinal axis of said device, said means operative to open said blades only at a substantially zero value of aerodynamic pressure on the blades, jet propellent means in said motor body to rotate said device about its longitudinal axis, spring-pressed means to initiate the jet propellent means, and a detent for the spring-pressed means connected with the propeller blades, for disarming the spring-pressed means on distension of the propeller blades.

2,468,796
METHOD OF AND APPARATUS FOR DUAL COIL INDUCTION HEATING
Alden O. Wood, Parma, and John T. Vaughan, Shaker Heights, Ohio, assignors to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio
Application June 17, 1944, Serial No. 540,842
6 Claims. (Cl. 219—13)

1. In apparatus for inductively heating a longitudinal edge of a metallic article, an inductor comprising an outer member adapted to encircle a part of the article, an inner member comprising a loop having a conductor adapted to extend arcuately over an edge of the article and to lie in part within the outer member, the loop comprising a conductor adapted to lie adjacent to and along an edge of the article and two conductors adapted to lie along and adjacent to opposite sides of the article inwardly from its edge, the arcuate conductor serving as means for joining the said adjacent members to the edge adjacent member and to each other, means connecting the inner and outer members of the inductor in series, and means for supplying inducing current to the inductor.

2,468,797
METHOD OF MAKING PREFORMED PACKING
James T. Wong, Vallejo, Calif.
Application June 8, 1945, Serial No. 598,346
2 Claims. (Cl. 154—33.1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A method of preforming a packing comprising spirally winding a strip of hard packing about a mandrel into a cylindrical form, applying pressure axially of the cylindrical form while confining it against deformation, spirally winding a strip of soft packing about the same mandrel into a cylindrical form and placing it axially of the first formed packing portion, applying pressure axially of the soft packing form against the hard packing form while confining both packing portions together against deformation, then spirally winding a hard packing about the same mandrel into a cylindrical form and moving it axially against the soft packing form by applying pressure axially thereagainst to complete the packing and confining the completely formed packing against deformation while the axial pressure is applied and thereafter releasing the completely formed packing from the mandrel and from confinement.

2,468,798
MODIFIED STYRENE-LINSEED OIL INTERPOLYMERS
Arthur E. Young and Harold M. Hoogsteen, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application June 25, 1947, Serial No. 757,063
7 Claims. (Cl. 260—23)

1. A method which comprises interpolymerizing one part by weight of linseed oil with between 0.5 and 1.2 parts of a mixture of alkenyl aromatic hydrocarbons having from 8 to 10 carbon atoms in the molecule and comprising a major proportion of styrene, from 0 to 35 per cent by weight of an alpha-alkylated styrene, and divinylbenzene in amount within a range of from:

Per cent DVB=2+0.03143 A

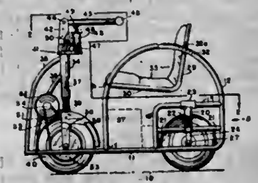
to

Per cent DVB=4—0.02571 A

wherein DVB represents divinylbenzene and A is the per cent by weight of alpha-alkylated styrene in the mixture of alkenyl aromatic compounds, while the linseed oil and the alkenyl aromatic compounds are dissolved in a substantially inert solvent which is present in amount corresponding to between 20 and 60 per cent of the weight of the solution, the polymerization being accomplished by heating the solution at temperatures between 100° and 200° C. until at least 80 per cent by weight of the monomeric alkenyl aromatic compounds are reacted.

2,468,799
HYDROGENATING FAT
Norbert W. Ziels, Leonia, and Werner H. Schmidt, Grantwood, N. J., assignors to Lever Brothers Company, Cambridge, Mass., a corporation of Maine
No Drawing. Application October 20, 1943, Serial No. 507,014
6 Claims. (Cl. 260—409)

1. A method of producing a fat solid at room temperature but substantially liquid at body temperature, which comprises hydrogenating a normally liquid glyceride oil selected from the group consisting of peanut oil, cottonseed oil and soy bean oil, with a nickel catalyst containing 1.38 to 5% sulfur based on nickel, at a temperature of 130 to 250° C., and at a pressure of 5 to 100 pounds per square inch hydrogen.

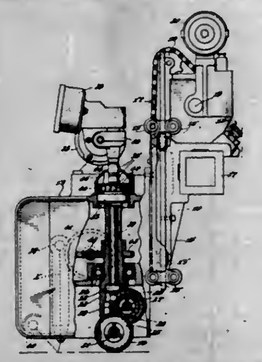


2,468,800
WEAVING REED
Isaac Andrews, Spartanburg, S. C., assignor to Andrews Company, Spartanburg, S. C., a copartnership
Application March 21, 1946, Serial No. 656,099
3 Claims. (Cl. 139—92)

1. In a weaving reed having backs and dents, the combination of reinforcing bars, a pair for each back, and each extending beyond the back and bent towards each other, an end member for each end of the back, each end member having a pair of parallel members the ends of which have circular portions enveloping the circular

ends of the backs and having parts parallel with each other extending between the members of the backs, and beneath the bent over ends of the reinforcing members, and means fastening each pair of parallel members together.

2,468,801
POWER OPERATED CHAIR
Charles T. Beall, Casper, Wyo.
Application February 7, 1947, Serial No. 727,265
1 Claim. (Cl. 180—26)



A power operated wheel chair comprising, a substantially rectangular frame having a seat, two supporting wheels for the rear end of the frame, positioned within the area of the frame, a vertical bearing positioned in front of the seat, the axis of the bearing being within the area of the frame, means for supporting the bearing from the frame, comprising at least three rigid members connected at their lower ends with the frame and at their upper ends with the bearing, a wheel fork having a spindle mounted in the bearing, a drive wheel mounted for rotation in the wheel fork, the rigid supporting members for the bearing being spaced from the axis thereof a distance at least as great as the radius of the wheel at the corresponding level, whereby the wheel may have an unobstructed rotation of 360 degrees, a steering device attached to the wheel fork spindle, above the bearing, a motor carried by the wheel fork below the vertical bearing, and means for transmitting motion from the motor to the drive wheel.

2,468,802
TRACING DEVICE
Walter Begerow, Wood-Ridge, N. J., assignor to Air Reduction Company, Incorporated, a corporation of New York
Application June 9, 1945, Serial No. 598,544
6 Claims. (Cl. 250—41.5)

1. In a tracing device having a traction wheel rotatable about a horizontal axle carried by the lower end of a sleeve that may be turned about

a vertical axis to orient or steer the traction wheel, a motor-driven shaft extending through said sleeve and operatively connected to the traction wheel to drive the same, automatic means for turning the sleeve to steer the traction wheel, and a housing through which said sleeve and shaft extend and which houses at least part of said automatic means for turning the sleeve, said

housing having such size and location that it so obscures the traction wheel that its orientation cannot be readily observed by the operator, the improvement which comprises an indicator element connected to and movable with the upper portion of the sleeve above said housing where it may be readily seen by the operator to indicate the orientation of the traction wheel at all times.

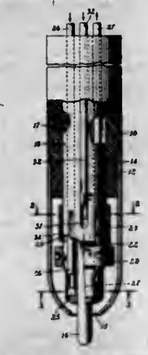
2,468,803

METHOD OF PURIFYING SODIUM SULFATE

André Bonnet, Vaulx-en-Velin, and Pierre Costet, La Voulte-sur-Rhone, France, assignors to Comptoir des Textiles Artificiels, a corporation of France

No Drawing. Application January 28, 1947, Serial No. 724,932. In France September 26, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires September 26, 1961
7 Claims. (Cl. 23—121)

1. A method of treating sodium sulfate to remove the metal salt impurities contained therein which comprises simultaneously adding trisodium phosphate and sodium sulfide to a neutral aqueous solution of the sodium sulfate, and removing the precipitate from the sodium sulfate solution.



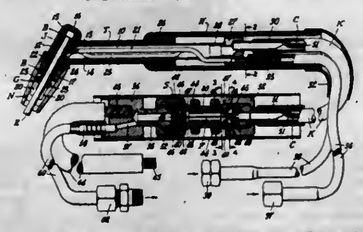
2,468,804

FLUID-COOLED GAS BLANKETED ARC-WELDING TORCH

Rudolph T. Breymeier, Niagara Falls, N. Y., assignor to The Linde Air Products Company, a corporation of Ohio

Application July 13, 1945, Serial No. 604,834
10 Claims. (Cl. 219—15)

1. In a gas blanketed arc welding torch, an electrically conductive electrode support sleeve, electrically conductive electrode gripping means mounted on said sleeve, means for supplying electric welding current through said support sleeve and gripping means to the electrode, a gas confining and directing nozzle mounted on said electrode support sleeve and having an imperforate internal surface of revolution concentric with the electrode and extending from the nozzle mounting on said sleeve beyond said gripping means toward the arc to form with the electrode an annular orifice, rigid annular walls outside of and concentric with the electrode disposed axially between the mounting of said nozzle on said sleeve and said annular orifice and forming an annular cooling chamber, cooling fluid passage means for passing cooling fluid into and out of



said rigid walled annular cooling chamber, and means for supplying gas to the interior of said surface of revolution adjacent the mounting of said nozzle on said sleeve to flow axially along the annular gas passage between said surface of revolution and said electrode gripping means in heat interchange relation with the cooling fluid in said annular cooling chamber and thereby out through said annular orifice.

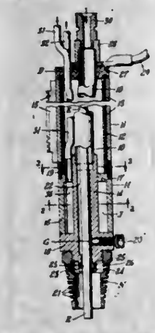
2,468,805

FLUID COOLED GAS BLANKETED ARC-WELDING TORCH

Harry T. Herbst, Roselle, N. J., assignor to The Linde Air Products Company, a corporation of Ohio

Application March 8, 1946, Serial No. 652,924
8 Claims. (Cl. 219—15)

1. In a gas blanketed arc welding torch, a rigid metal tube, an electrically conductive electrode holder electrically connected to said tube, electrically conductive electrode contacting means mounted on said holder, a nozzle mounted on said electrode holder and extending beyond said contacting means toward the arc to form with the electrode an annular orifice, gas passage means for supplying gas through said rigid metal tube and said electrode holder along the electrode to the interior of said nozzle to flow out through said annular orifice, rigid annular walls outside of said electrode holder and forming a cooling jacket connected with said rigid metal tube, cooling fluid



passage means communicating with said jacket, a flexible tube connected to said rigid metal tube for receiving cooling fluid therethrough from said jacket, and a flexible metal cable electrically connected to said rigid metal tube passing along inside said flexible tube and subject to the cooling fluid action for supplying electric welding current through said electrode holder and contacting means to the electrode.

2,468,806

WATER-COOLED GAS BLANKETED ARC-WELDING TORCH

Frank J. Pilia, Riverside, N. J., assignor to The Linde Air Products Company, a corporation of Ohio

Application May 10, 1948, Serial No. 668,945
6 Claims. (Cl. 219—15)

1. In a gas blanketed arc welding torch, an electrically conductive electrode support sleeve, electrically conductive electrode contacting means mounted on said sleeve, means for supplying electric welding current through said support sleeve and contacting means to the electrode, a nozzle mounted on said sleeve and having an internal surface of revolution concentric with the electrode and extending beyond said gripping means toward the arc to form with the electrode an annular gas passage terminating in an annular orifice, rigid annular walls above said contacting means and nozzle and outside of said electrode support sleeve and concentric with the electrode and forming an annular cooling chamber, said electrode support sleeve having a passage extending therethrough adjacent the electrode and inside of said annular cooling chamber for supplying gas to the interior of said surface of revolution to flow through said annular passage and out through said annular orifice.

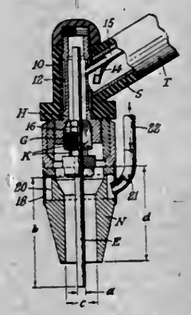
2,468,807

WATER-COOLED GAS BLANKETED ARC-WELDING TORCH

Harry T. Herbst, Roselle, N. J., assignor to The Linde Air Products Company, a corporation of Ohio

Application May 9, 1946, Serial No. 668,517
5 Claims. (Cl. 219—15)

1. In a gas blanketed arc welding torch, an electrically conductive housing tube for an electrode, electrically conductive electrode contacting means mounted on said tube, a nozzle mounted on said contacting means and extending therebeyond toward the arc to form with the electrode an annular gas passage terminating in an annular orifice, a rigid annular wall outside of and concentric with said tube and forming therewith an annular cooling chamber, said torch having a passage extending from said tube through said contacting means and inside said annular cooling chamber and into said nozzle means near its

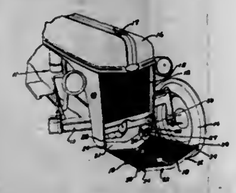


mounting on said contacting means whereby gas supplied to said tube passes along said annular gas passage and along said electrode and out through said annular orifice and means for feeding said electrode through the gas in said housing tube, through said rigid walled annular cooling chamber, through said contacting means, and out through said nozzle.

2,468,808

GAS BLANKETED ARC WELDING

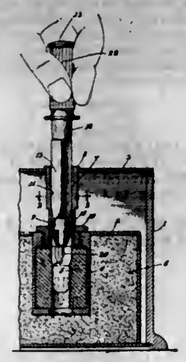
Francis M. Drake, Woodbridge, N. J., assignor to The Linde Air Products Company, a corporation of Ohio



Application March 12, 1947, Serial No. 734,049
9 Claims. (Cl. 219—10)

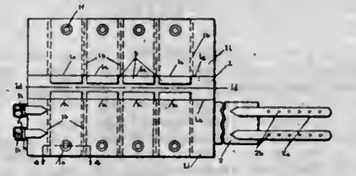
1. Method of arc welding metals, which comprises passing alternating current of high current density through a non-depositing electrode and the work to maintain an arc, passing along the electrode to blanket the arc and molten portions of the work an annular stream of non-oxidizing gas containing essentially an inert gas and having a substantially constant diameter of the order of from 2⅓ to 4 times the electrode

diameter and a length of the order of from 4 to 8 times its own diameter, and maintaining the alternating current density within the range of the order of from between 60 and 120 amperes for a one-sixteenth inch diameter electrode, up to between 600 and 750 amperes for a three-eighths inch diameter electrode.



2,468,809
TRACTOR RADIATOR GRILLE
Harold L. Brock, Detroit, and Clarence F. Kramer, Birmingham, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application May 27, 1947, Serial No. 750,820
4 Claims. (Cl. 180—69)

1. In a tractor having an internal-combustion engine and a cooling radiator therefor mounted in an upright position adjacent the front of the tractor, a sheet metal hood extending over said engine and said radiator, side panels extending downwardly from said hood on opposite sides of said radiator and defining with said hood a generally rectangular opening, a grille covering said opening and having pivotal connections adjacent its lower edge with said side panels to permit said grille to be swung from a substantially vertical closed position to a substantially horizontal open position exposing said radiator for cleaning purposes, spring urged latch means adjacent the upper edge of said grille at opposite sides thereof for releasably holding said grille in closed position, and lugs at the lower edge of said grille adjacent and spaced radially from the axis of said pivotal connections, said lugs being arranged to engage portions of said side panels when said grille has been lowered to a substantially horizontal position to hold the grille in that position.

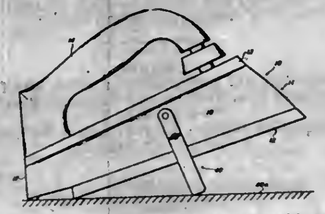


2,468,810
PYROPHORIC LIGHTER
Ray L. Burchett, East Orange, N. J., assignor to Ronson Art Metal Works, Inc., Newark, N. J., a corporation of New Jersey
Application January 23, 1947, Serial No. 723,736
2 Claims. (Cl. 67—4.1)

2. In a pyrophoric lighter of the character described having a body portion providing a fuel reservoir containing absorbent material adapted to receive a movable torch and also having a casing detachable from said body, the combination with said body portion of a torch, a sleeve for receiving and aligning said torch tip into register within said absorbent material, said sleeve serving as a means of holding said body and casing member together and threadingly engaging said body member, said sleeve and torch being provided with cooperating non-circular cross-sectional portions so constructed and arranged that said torch is slidably movable in an axial direction and upon forceful rotation angularly

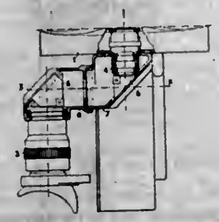
rotates said sleeve to releasing or holding position.

2,468,811
SURCINGLE
William Everett Carroll, Rockville, Md.
Application September 4, 1947, Serial No. 772,177
2 Claims. (Cl. 54—23)



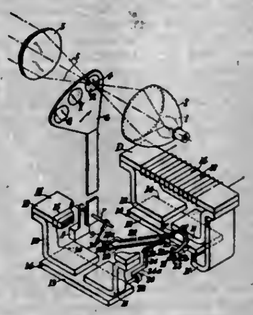
1. In a surcingle or girth, a pocket member and weight positioned therein.

2,468,812
DIGIT INDICATOR FOR SLIDE RULES
Michael Cherney, North Tarrytown, N. Y., assignor of one-half to Joseph B. Danis, New City, N. Y.
Application November 27, 1946, Serial No. 712,621
8 Claims. (Cl. 235—64.3)



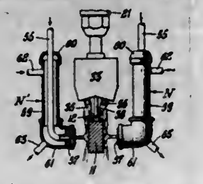
1. A digit indicator for a slide rule comprising a member mounted on a slide rule glass and having a series of numbers thereon, said member being rotatably slidable with respect to an indicating point whereby the member may be rotated to bring, in turn, various of the numbers in line with the indicating point.

2,468,813
ELECTRIC IRON HAVING A SUPPORTING MECHANISM
Benjamin Cooper, New York, N. Y., and Albert F. Hohmann, Teaneck, N. J.; said Hohmann assignor to said Cooper
Application April 28, 1947, Serial No. 744,304
2 Claims. (Cl. 38—79)



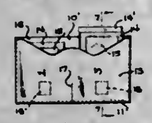
1. An iron comprising a casing, said casing comprising outwardly inclined side walls, a top wall and a rear wall, a sole plate on the bottom portion of said casing, the said sole plate terminating short of said rear wall thereby providing an opening between said rear wall and an edge of said sole plate, a flanged bracket seamed to the inner surface of said top wall, the flanges of said bracket extending in parallel, spaced arrangement to said side walls, an inwardly and downwardly inclined pivot pin mounted on each of said flanges and said adjacent side walls, said pins projecting through said side walls, supporting legs secured to the projecting portions of said pins, and disposed outside of said casing, helical gear means mounted on each of said pins between said flanges and said side walls, a pair of levers fixed to each other and pivotally mounted within said casing, one end portion of each of said levers being formed with gear means meshing with an adjacent helical gear, the other ends of said levers being formed with end portions projecting through said opening.

2,468,814
EXPOSURE LENS FINDER FOR CAMERAS HAVING ADJUSTABLE SIGHTING POSITION
André Clément Coutant and Jacques Mathot, Paris, France
Application May 6, 1947, Serial No. 746,300
In France May 7, 1946
1 Claim. (Cl. 95—42)



In a cinematographic camera having an object lens, a view finder comprising a housing portion in fixed position on the camera, a lens mounted in said housing with its axis parallel to, but offset transversely from, the axis of the object lens, an optical system for collecting light rays from the object lens and shifting them transversely so as to pass through the first mentioned lens, means provided in the housing portion for bending at right angles the rays passing through the first mentioned lens so that the axis of the bent rays is perpendicular to a vertical plane passing through the axis of the object lens, said housing having a circular neck portion concentric with the axis of said bent rays, a second housing portion having a circular neck portion having a tongue and groove connection with the neck of the first housing portion to provide for rotation of the second housing portion about the axis of said bent rays, means for limiting said rotation to 90°, means carried by the second housing portion for bending said rays at right angles, a tubular extension carried by the second housing portion with its axis perpendicular to the axis of rotation of said portion, an occular lens mounted in said tubular extension.

2,468,815
LIGHT SIGNAL
Myrl R. Douglass, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Original application January 29, 1942, Serial No. 428,734. Divided and this application March 27, 1946, Serial No. 657,403
2 Claims. (Cl. 175—335)

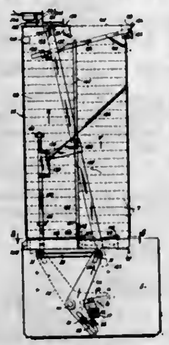


1. An electroresponsive device comprising first and second electromagnets controlling first and second pivoted armatures which are adapted to pick up when the associated electromagnet is energized, magnetic means associated with said second pivoted armature for preventing it from picking up except when said second electromagnet is supplied with current of a particular polarity, a member movable from a first position to second and third positions, means operatively connecting said first armature with said member to move said member from its first to its second position in response to movement of said first armature from its released to its attracted position, means operatively connecting said second armature with said member to move said member from its second to its third position in response to movement of said second armature from its released to its attracted position, mechanical means associated with said second armature to prevent it from picking up unless said first armature is picked up, means including a source of current of reversible polarity for energizing said first electromagnet, and means including a contact controlled by said first armature and closed only when said first armature is picked up for supplying current from said source to said second electromagnet.

2,468,816
PROCESS FOR MAKING COMPOSITE WELDED ARTICLES
Ralph E. Duce, Kokomo, Ind., assignor to Haynes Stellite Company, a corporation of Indiana
Application January 4, 1946, Serial No. 638,976
5 Claims. (Cl. 22—204)

1. Process for controlling the contour of a lateral margin of a welded-on overlay of a protective metal during the deposition of such overlay upon a metal article, which comprises feeding at least one molten body of a protective metal into contact with successive portions of a surface of an article to be provided with a welded-on overlay, while effecting relative movement between such surface and said body of protective metal and while heating said successive portions of the surface to a welding temperature at which the metal of the article is not substantially molten but at which the protective metal in contact therewith is molten, whereby the molten metal flows over and is intimately united with said surface, during such relative movement between said surface and said body, directing a flowing stream of a cooling fluid across the path of flow of the portion of the molten metal at a lateral margin of the surface of the article having thereon the molten overlay metal, while preventing substantial contact of said stream of cooling fluid with the free exposed surface of said molten metal remote from said margin, thereby chilling and immobilizing only those portions of the overlay metal in the path of said stream, said cooling fluid being selected from the class consisting of air, inert gases, and non-combustible gases, and continuing to flow molten metal upon successive portions of said surface of the article until a welded-on overlay of desired thickness is obtained which has approximately the same thickness at points adjacent the lateral margin of the surface of the article as at points remote from said margin.

2,468,817
POCKET CONTAINER FOR POSTAGE STAMPS
Viva Duchin, New York, N. Y.
Application June 1, 1946, Serial No. 673,821
1 Claim. (Cl. 150—41)



A postage stamp holder comprising in combination a base wall and two sidewalls firmly attached by marginal seams along three sides to said base wall on opposite sides, and central seams extending from a place near the center of the stamp holder to the center of the longitudinal marginal seam, said walls and said seams defining a plurality of pockets for slidable insertion and removal of a plurality of folders for stamps, there being an operative connection between stamp folders in back to back opposed pockets, whereby removal of one folder will cause removal of a second folder, while removal of the second folder will not serve to remove the first folder, said operative connection comprising a U-shaped rigid extension for said first mentioned stamp folder passing through a hole provided in said base wall and ending in guide means for the movement of said second stamp holder.

2,468,818
ELECTRICALLY HEATED DENTAL SPATULA
Leonard Fox, Buffalo, and Raymond Resnick, New York, N. Y.
Application January 15, 1947, Serial No. 722,228
1 Claim. (Cl. 219—21)

In a dental spatula having a tubular handle formed at one end with an enlarged recess, a heating element casing having its rear end positioned in said recess and having its front end reduced, a hollow tip having an enlarged rear end snugly fitted within said reduced front end of said casing, screw threads formed on the extended front end of said hollow tip, a spatula having a screw threaded recessed rear end threadedly engaged with said screw threads of said hollow tip, and heating wires for connection with a source of electrical energy extended through said casing and into said hollow tip and electrically insulated from said casing and said hollow tip.

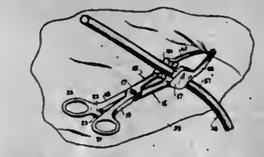
2,468,819
ARTICLE DISPENSING APPARATUS
Benjamin W. Fry, Ladue, Mo., assignor to National Vendors, Inc., St. Louis, Mo., a corporation of Missouri
Application April 25, 1947, Serial No. 743,829
17 Claims. (Cl. 312—67)

8. In a dispenser, means for holding a first and a second column of trays, said columns having adjacent ends, each tray being movable laterally with respect to the trays adjacent to it, a member laterally movable near the tops of the columns normally positioned at the top of the first column and movable into position near the top of the second column, said member including means to remove an article from an uppermost tray in the second column and including means to move the tray thus emptied from the top of the second column to the top of the first column, and means coordinated with the action of said movable member first to drop the first column to provide a space at its upper end for reception of the retracted tray before said tray is retracted, then to lift the second column to replace with another tray the tray retracted from its upper end and to move the bottommost tray from the first column into position beneath the second column.

2,468,820
MEANS FOR COOLING PROJECTED DEVICES
Robert H. Goddard, deceased, late of Annapolis, Md., by Esther C. Goddard, executrix, Worcester, Mass., assignor of one-half to The Daniel and Florence Guggenheim Foundation, New York, N. Y., a corporation of New York
Application February 1, 1947, Serial No. 725,805
2 Claims. (Cl. 102—92.5)

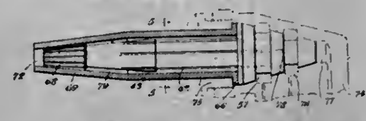
1. In a projected device having an enclosing casing, means for cooling said casing comprising a porous wall forming the nose portion of said casing, and means to supply a liquid coolant under pressure to the inner face of said porous wall and to force said coolant through said wall to form a protective film on the outer face thereof and on said casing.

2,468,821
BRAD
Charles B. Goodstein, Newton Highlands, Mass.
Application February 24, 1945, Serial No. 579,620
2 Claims. (Cl. 85—28)



1. A brad having a straight cylindrical shank uninterrupted by recesses, said shank having projections thereon only at one end thereof, said projections extending diametrically from said shank and being of a thickness less than one half the diameter of said shank, the outer end of each of said projections being rectangular in both transverse and longitudinal cross section.

2,468,822
PRODUCTION OF HYDROCARBON RESINS
William K. Griesinger, Drexel Hill, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application March 22, 1946, Serial No. 656,520
1 Claim. (Cl. 260—82)

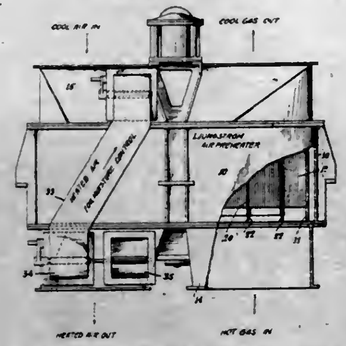


The method of producing a thermoplastic resin from an unsaturated hydrocarbon distillate boiling between 300° F. and 600° F. at 10 mm. pressure, such distillate being derived from hydrocarbon polymers resulting from the treatment of cracked gasoline with a polymerizing adsorbent, which comprises intimately contacting said unsaturated hydrocarbon distillate with substantially an equal volume of sulfuric acid of from 90% to 100% concentration for a period of ¼ hours to 3 hours at a temperature between 30° F. and 50° F., settling and separating from the mixture an acid layer containing unsaturated hydrocarbons, diluting the acid layer with an equal volume of water to cause the separation of an insoluble, oily material from the acid layer, neutralizing the oily material with an aqueous solution of sodium hydroxide, separating the neutralized oily material from the aqueous solution, and heating the oily material at a temperature of about 200° F. for a sufficient period of time to cause solidification thereof to a hard, brittle resin.

2,468,823
CLAMP
Edgar M. Housepian, New York, N. Y.
Application January 13, 1948, Serial No. 1,992
13 Claims. (Cl. 128—346)

1. In a line clamp of the type containing two coacting jaws movable relative to each other, a row of teeth on each jaw in facing and interlockable relation with that of the other, each row containing a plurality of sets of teeth adapted to coact with certain correspondingly positioned sets of the other row, the teeth of said coacting sets being substantially oppositely positioned and being proportioned to engage and hold therebetween a line of predetermined thickness, each set having teeth of different lengths from that of any other set of teeth on the same row, whereby lines of different thicknesses can be operatively engaged by different coacting sets.

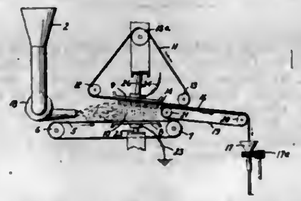
2,468,824
MULTIPIECE CUTTING TIP
Howard G. Hughey, Fanwood, N. J., assignor to Air Reduction Company, Incorporated, a corporation of New York
Application November 23, 1944, Serial No. 564,862
12 Claims. (Cl. 158—27.4)



1. A multi-piece torch tip comprising an insert formed to provide when enclosed by shell and seat ring means a plurality of longitudinally extending heating gas passages in the assembled tip, and shell and seat ring means each fitted separately directly upon the insert, spaced longitudinally extending peripheral portions of the insert being in contact with the inner surfaces of the shell and the seat ring means to form passages for heating gas, the passages extending continuously under the shell and seat ring means in succession.

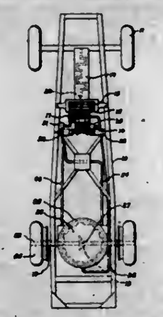
2,468,825
PLATING
George W. Jernstedt, Belleville, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application December 21, 1944, Serial No. 569,273
4 Claims. (Cl. 29—196.3)

1. An article of manufacture comprising, in combination, an electrically conducting base member, a thin electrodeposited coating of a thickness of from 0.1 to 0.5 mil of a bright silvery ternary alloy composed of from 50% to 75% copper, 20% to 35% tin and from 8% to 15% zinc applied to the base member, and a thin coating less than 0.1 mil in thickness of chromium electrodeposited over the ternary alloy coating.



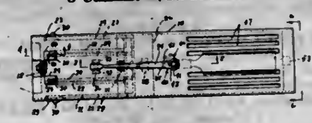
2,468,826
MOISTURE CONTROL IN HEAT RECOVERY APPARATUS
Per Hilmer Karlsson, Wellsville, N. Y., and Roland S. Cooper, River Forest, Ill., assignors to The Air Preheater Corporation, New York, N. Y.
Application June 24, 1944, Serial No. 541,907
2 Claims. (Cl. 257—6)

1. The method of transferring heat from a hot gas to a cool gas, such as air, through the medium of surfaces heated by the gas to impart heat to the air which comprises; initially passing hot gases in contact with heat exchange surfaces; imparting such an amount of the absorbed heat from said surfaces to air as to lower the temperature of said surfaces to a point below the dew point of the heating gases; passing hot gases over the cooled surfaces to reheat the latter, thereby causing moisture to be deposited on said surfaces from the heating gases; and passing over said surfaces a relatively dry gaseous fluid heated to a temperature sufficiently high to absorb the moisture from said surfaces prior to again imparting heat from said surfaces to cool air.

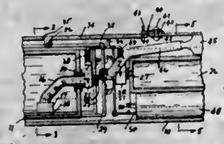


2,468,827
ELECTROSTATIC CONTROL OF FIBERS
Edgar S. Kennedy, Wayne, and Frederick C. Wedler, Media, Pa., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application October 4, 1944, Serial No. 557,190
3 Claims. (Cl. 19—150)

1. Apparatus for forming a seemingly continuous structure of indefinite length from loose masses of spinnable fibers which comprises electrode members, means for continuously maintaining an electrostatic field between the electrodes, means for continuously feeding the spinnable fibers to the field, an endless surface above the zone of the field to which the fibers are fed and having a discharge portion extending out of the field, means for continuously moving the surface through the field whereby the fibers are electrostatically erected against the surface in oriented and parallelized condition, another end-



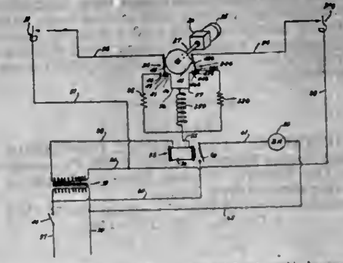
less surface having a fiber receiving portion disposed closely beneath the fiber discharge end of the first-mentioned surface, and means for continuously moving the second surface in the direction of movement of the first surface whereby when the erected fibers contact the second surface all of the fibers are laid back upon themselves in overlapping parallelized condition on the second surface and carried thereby from the vicinity of the field in the form of a seemingly continuous structure.



2,468,828
HYDRAULIC DRIVE FOR MOTOR VEHICLES
Herman A. Kopp, Bronx, N. Y.
Application December 12, 1946, Serial No. 715,806
3 Claims. (Cl. 180—66)

1. In combination, a vehicle comprising a differential driving mechanism, an engine power plant and a main friction clutch, a drive shaft extending from the clutch, a pump for building up hydraulic pressure, a second gear-toothed type clutch device adapted to connect and disconnect the pump with the drive shaft, manually operable means accessible to the operator for effecting the operation of the latter clutch device, a driving motor connected to the differential driving mechanism; selector means connected between the pump and the driving motor to change the flow of fluid to the driving motor to operate the same in one direction or the other.

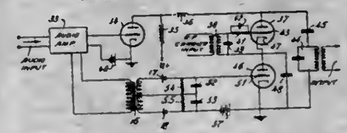
2,468,829
ALARM AND PROTECTOR
Philip La Porta, Brooklyn, N. Y.
Application July 9, 1947, Serial No. 759,798
8 Claims. (Cl. 116—67)



8. An alarm and protector, comprising a casing of a size to be conveniently carried in one's hand and having an opening at one end through which the light of a flashlight may pass, a liquid container within said casing for a paint or odorous chemical spray, a tube system for liquid and having discharge nozzles around said casing and connected with said liquid container and including a supply tube for liquid extending into said liquid container, an air container within said casing, a tube system for compressed air and having discharge nozzles directed across said first named nozzles for spraying liquid from said liquid container and including a supply tube for air connected with said air container, valves controlling the flow of liquid and air respectively through said supply tubes in order to control passage of liquid and air, respectively, through said tube system for liquid and said tube system for air, a trigger lever movably mounted on said casing and adapted to be manually held down, a safety latch for holding said trigger lever down, resilient means for opening said valves and connected with and normally held inoperative by said trigger lever in its down position, a whistle connected with said tube system for compressed air at a point past the valve thereof for operating when said valve is opened, a flashlight mounted in said casing for throwing a beam of light through said opening in said casing and having a control switch, and means for closing said switch simultaneously with the opening of said valves.

2,468,830
HEAT DISTRIBUTION CONTROL
Charles E. Markham, St. Louis County, Mo., assignor, by mesne assignments, to Missouri Automatic Control Corporation, a corporation of Missouri.
Application December 20, 1945, Serial No. 636,181
15 Claims. (Cl. 236—1)

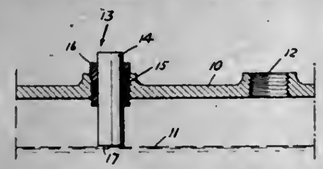
3. In a control for distribution of temperature conditioned fluid in combination, temperature conditioning means, a branched distributing conduit, a plurality of conditioned fluid receiving spaces each being served by one of said branches, an apportioning valve controlling said branches at the junction thereof, electrically operated means for moving said valve through a cycle of successive positions in each of which at least one of said branches is restricted, control means for said electrically operated means including a temperature-responsive switch in each of said fluid receiving spaces each responsive to a requirement for temperature conditioned fluid to complete an energizing circuit branch for said electrically operated means, and cam operated



switch means for each of said circuit branches each being movable to a circuit interrupting position as said valve is moved to a non-restricting position with relation to its respective conduit branch.

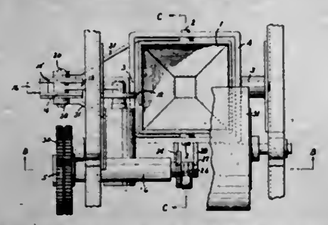
2,468,831
REDUCTION OF CORROSIVE ACTION OF FRIEDEL-CRAFTS TYPE CATALYSTS
Gordon H. Miller, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application May 22, 1945, Serial No. 595,253
5 Claims. (Cl. 260—683.5)

1. In the catalytic conversion of hydrocarbons at elevated temperature with a catalyst liquid comprising an aluminum halide-hydrocarbon complex liquid containing free aluminum halide in a reaction zone confined by a metal normally subject to substantial corrosion by the catalyst during the said conversion, the method of inhibiting said corrosion which comprises contacting said complex catalyst liquid in a separate treating zone in the absence of added hydrogen halide with free alkaline earth metal in finely-divided form at an elevated temperature and for a time sufficient to render the catalyst liquid relatively non-corrosive to boiler steel at 210° F., separating said non-corrosive complex liquid catalyst from the said metal in said treating zone, and passing said separated non-corrosive complex liquid to the said reaction zone to serve as the catalyst therein.



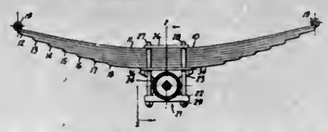
2,468,832
SIGNALING SYSTEM
Luke H. Montgomery, Nashville, Tenn.
Application September 9, 1947, Serial No. 772,912
20 Claims. (Cl. 332—38)

1. In combination, an electronic circuit having an input circuit and an output circuit with a predetermined transfer characteristic therebetween, circuit connections for applying an audio signal wave to said input circuit to swing about a predetermined operating point on said



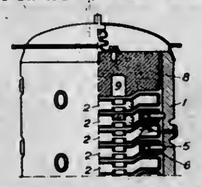
transfer characteristic, an asymmetry detection circuit supplied with said audio signal wave and designed and adapted to yield an output control wave which varies with asymmetrical positive and negative portions of said signal wave, and circuit connections for applying said control wave to said electronic circuit to shift said operating point in the direction of swing of the smaller of said asymmetrical portions when said audio signal wave is asymmetrical.

2,468,833
CONTAINER LIQUID LEVEL INDICATOR
Harold Purves Murphy, Ridley Park, Pa., assignor to The Electric Storage Battery Company, a corporation of New Jersey
Application July 18, 1944, Serial No. 545,521
5 Claims. (Cl. 116—118)



1. A device for indicating the liquid level in a container having a cover and containing liquid comprising a rod of transparent material mounted in an opening in the cover, said rod having a rough horizontal surface at its lower end reflecting light from above when out of contact with the liquid and transmitting said light substantially without reflection when in contact with the liquid, said horizontal surface being substantially parallel with the surface of the liquid.

2,468,834
TOW FOLDING DEVICE FOR SHIPPING CARTONS
Thomas L. Nash, Parkersburg, W. Va., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application December 7, 1946, Serial No. 714,752
1 Claim. (Cl. 28—21)

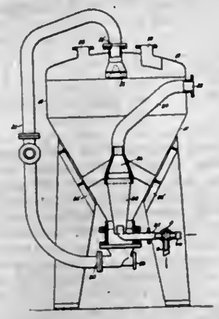


An apparatus for depositing a strand comprising a frame member, a yoke pivotally mounted on the frame, guide means for the strand pivotally mounted on the yoke on an axis set at an angle to the pivotal axis of the yoke and to the path of the strand through the guide means, a drive shaft, a worm on the shaft, a cross shaft, a worm gear on the cross shaft in mesh with the worm, a crank disc on the cross shaft, an eccentric arm connected to the crank disc for oscillating a sliding yoke and sliding block mounted on the axis of the yoke pivotally mounted on the frame, arms connected to the sliding block for oscillating the guide means, a crank disc mounted on the drive shaft and an eccentric arm connected to the last mentioned crank disc for oscillating the yoke.

2,468,835
VEHICLE SPRING CONSTRUCTION
Harry E. Nordquist, Seattle, Wash., assignor to Laher Spring & Tire Corp., Oakland, Calif., a corporation of Oregon
Application April 15, 1944, Serial No. 531,187
2 Claims. (Cl. 267—52)

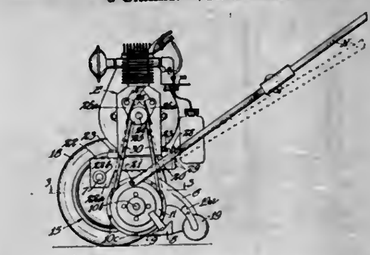
1. In a vehicle spring construction for application to a vehicle axle, a plurality of superposed spring leaves, mounting means below the lower leaf comprising vertically spaced pads rigidly secured to the axle, a saddle plate adjacent the upper side of the top main leaf and located generally above the upper pad, a thrust transmitting interlock between an integral portion of the top leaf and a medial portion of the plate to prevent longitudinal displacement of the uppermost leaf relative to the plate, a second saddle plate interposed between the lowermost leaf and the upper pad, means serving to lock said last plate against longitudinal movement with respect to its associated pad, and bolts extending through aligned holes provided in both said plates and in the lower pad and serving to clamp the leaves together and upon the second named saddle plate, said bolts being in close proximity with the adjacent side edges of the leaves.

2,468,836
ANODE TUBE FOR IONIC VALVES FOR HIGH-VOLTAGE STATIC CURRENT CONVERTERS
Gunnar J. Persson, Ludvika, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a corporation of Sweden
Application November 29, 1945, Serial No. 631,678
In Sweden July 10, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires July 10, 1964
4 Claims. (Cl. 250—27.5)



1. An anode tube for ionic valves for high voltage static current converters comprising a vacuumtight tube, at least partly of insulating material, an anode therein, a number of conducting hollow sheet metal bodies therein having spaces therebetween, means to impress different voltages on said bodies during the impermeable periods of said valve, said bodies having channels for the passage of the current, the majority of the volume of each of said bodies consisting of an empty space limited in the direction of the current by conducting walls of practically equal potential.

2,468,837
MAGNETOSTRICTIVE TRANSDUCER
Robert L. Peek, Jr., New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 2, 1945, Serial No. 608,573
10 Claims. (Cl. 177—386)

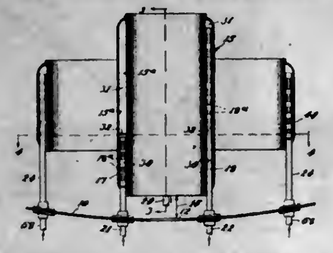


1. A magnetostrictive device comprising an annular magnetostrictive core, means mounting said core for substantially free extensional vibration, and means for exciting said core to produce out-of-phase magnetostrictive action in adjacent arcuate portions thereof for effecting extensional vibration of said core in a mode higher than its fundamental.

2,468,838
FILTERING APPARATUS
Augustin Rey, Paris, France, assignor to Comptoir des Textiles Artificiels, Paris, France, a corporation of the Republic of France
Application July 31, 1947, Serial No. 764,973
In France February 20, 1941
1 Claim. (Cl. 210—141)

A filtering apparatus comprising a conical tank, means to supply the liquid to be filtered to the upper part of said tank, a perforated barrel disposed coaxially with and in spaced relationship to the wall of said tank to provide an annular chamber therebetween, a filter bed disposed in said chamber whereby the liquid in said tank will pass through said bed into said barrel, a duct to discharge the filtrate connected to the top of said barrel, a duct for emptying said tank and having means for admitting backwash water connected to the bottom of said barrel, an outlet for backwash water at the upper part of said tank above said filter bed, an ejector connected to the bottom of said tank, a distributor in the upper portion of said tank, and means connecting said ejector to said distributor for the withdrawal of the bed and the reintroduction thereof into said tank.

2,468,839
POWER LAWN MOWER
Nicholas Rodesci, Minneapolis, Minn.
Application October 4, 1943, Serial No. 504,830
5 Claims. (Cl. 56—26)



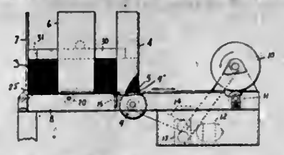
1. In a power mower having traction wheels, a frame, a cutter reel and a guiding handle extended rearwardly and upwardly from said frame and connected therewith on a transverse axis for limited upward swinging movement as essential elements, precisely, the combination of an engine support pivotally mounted on said frame above said cutter reel for upward swinging movement on a horizontal axis extending transversely of said frame, an engine mounted on said support rearwardly of said swinging axis having a driving pulley disposed above one end of said cutter reel, a driven pulley fixed to said end of said cutter reel and lying substantially in a vertical plane with said driving pulley, an endless belt connecting said pulleys for driving, said belt being of a length to cause idling of said engine when said support is in a lowered position, driving mechanism interposed between said cutter reel and said traction wheels for driving said traction wheels in a forwardly advancing direction and abutment means connected with said platform and extending outwardly therefrom in line with the arc of movement described by said handle when the same is moved on its pivot, said abutment means cooperating with said handle so that when the handle is in a raised position the said platform is pivoted upward to tension said belt for driving purposes and when the handle is lowered said platform pivots downwardly to automatically disconnect the drive between said pulleys.

2,468,840
HEATER FOR WORT KETTLES
Robert C. Schock, New Rochelle, N. Y., assignor to Schock, Gusmer & Co. Inc., Hoboken, N. J., a corporation of New Jersey
Application May 27, 1944, Serial No. 537,646
1 Claim. (Cl. 257—197)

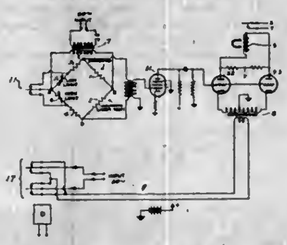
In a wort kettle having a vertical cylindrical portion and a substantially horizontal bottom for said cylindrical portion, and having means for heating the contents of the kettle, the combination of a centrally disposed hollow cylindrical member with its lower end in proximity to said bottom, and its axis centrally disposed substantially coincident with the axis of the kettle, said cylindrical member being radially within said first heating means for heating the wort at the central part of the kettle, to move the central part of the wort upwardly, and to set up a circulation of the wort radially outwards at the level of the wort, downwardly along the walls of the kettle and radially inwards at the bottom of the kettle, a horizontal transverse partition disposed along the vertical-length of the interior of the said cylin-

drical member, dividing said interior into two independent compartments, the upper compartment being larger than the vertical length of the lower compartment, means for supplying one of the compartments with low pressure steam, and

means independent of the first supply means for supplying the other compartment with high pressure steam, whereby on supplying the high pressure steam the velocity motion of the wort is increased, and breaks in the hop and wort boiling process are successively facilitated.



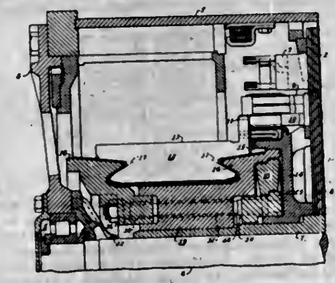
2,468,841
CHEST PROTECTOR
Sigmund Siegel, Brooklyn, N. Y.
Application April 23, 1947, Serial No. 743,412
3 Claims. (Cl. 2—51)



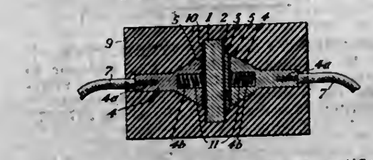
1. In a chest protector having a padded body for engagement across one's chest and provided at its top edge with a strap for engagement about one's neck, a band having one end attached to a bottom corner of the body for extension about the wearer's back to an opposite bottom corner of said body, a fabric loop attached to the face of the body inwardly of said opposite bottom corner, a terminal loop formed on the free end of said band for extension through said fabric loop, and means for releasably attaching the free end of said band to the front face of the body after said terminal loop has been passed through said fabric loop.

2,468,842
BOTTOM FEED DEVICE FOR PAPER SHEETS
Robert C. Sporleder, Mill Valley, Calif.
Application June 23, 1947, Serial No. 756,389
2 Claims. (Cl. 271—41)

1. In a bottom feed device for a stack of paper sheets, a support for said stack including means positioned adjacent one of the lower corners of such stack adapted to frictionally engage the second sheet from the bottom of said stack at a point substantially coincident with the edge of such sheet adjacent said corner for restraining movement of said second sheet in its plane upon forceably sliding the lowermost sheet in its plane from below said stack in a direction away from said corner when the weight of the stack is on said lowermost sheet, said means comprising a vertically positioned wafer-type blade having a generally upwardly directed cutting edge extending slantingly across said corner for cutting through the latter including said second sheet when said stack is positioned over said blade, and means for positioning such stack over said blade with its said corner in a position to be supported by the latter for said cutting.

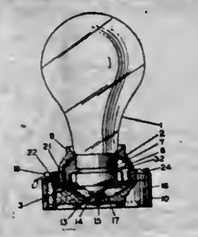


2,468,843
APPARATUS FOR ELECTRICALLY TESTING AND CLASSIFYING RESISTORS
David E. Sunstein, Elkins Park, Pa., assignor to Philco Corporation, a corporation of Pennsylvania
Application April 10, 1945, Serial No. 587,487
3 Claims. (Cl. 209—81)



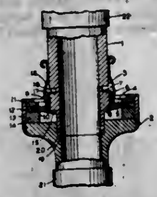
3. In a device for testing and classifying devices, a bridge circuit having a low limit setting, a high limit setting, means for automatically admitting a device to be tested in said bridge circuit; switching means for setting said bridge at its low limit and high limit sequentially comprising an electromagnet having circuit connections for energizing said electromagnet when said device to be tested is ready for test, means controlled by said electromagnet for applying signals to the input of said bridge and for positioning said device for test; a phase responsive device connected to the output of said bridge; a grouping mechanism; an electromagnet having an energizing circuit operative if the test of said device indicates that said device is within the limit tested for setting said circuit for its alternate limit and a second electromagnet having an energizing circuit operative if the test of said device indicates that said device is within the second limit tested for terminating said test, means controlled by each of said last mentioned electromagnets for operating said grouping mechanism; an electromagnet having an energizing unit controlled by each of said limit controlling electromagnets for ejecting said device from said bridge circuit; means including said signal applying means and said bridge and operative when each of said limits are set for testing whether said device under test is within, below or above the limit settings of said bridge.

2,468,844
SPRING COMMUTATOR
Carl Henry Sutherland, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 10, 1948, Serial No. 1,520
2 Claims. (Cl. 171—321)



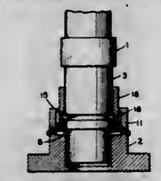
1. A spring-commutator assembly comprising a plurality of commutator-bars having V-grooves in their ends, and having commutator-lead-engaging parts at their rear ends, an immovable commutator-spider having an immovable V-ring at its rear end and an axially movable V-ring at its front end, said V-rings engaging the V-grooves, a disk-spring at the rear end, a peripheral edge of the disk-spring engaging a rear surface of the immovable rear V-ring, a pressure-ring having a peripheral edge in engagement with a rear inner surface of the disk-spring, a plurality of forwardly extending studs carried by said pressure-ring, and nuts on the front ends of said studs in engagement with a front surface of the movable front V-ring.

2,468,845
ALTERNATING ELECTRIC CURRENT RECTIFIER
Leslie Ernest Thompson, London, England, assignor, by mesne assignments, to The Union Switch and Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application July 28, 1945, Serial No. 607,617
In Great Britain November 20, 1944
4 Claims. (Cl. 175—366)



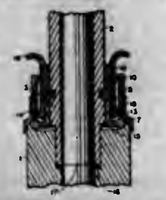
1. A rectifier unit comprising a rectifier element consisting of a layer of selenium applied to a base electrode and a counter electrode layer applied to the outer face of the selenium layer, said base electrode having the side opposite the selenium layer tinned, two conical contact members having their bases coated with a layer of soft solder and secured to the tinned face of said base member and to said counter electrode layer respectively by applying heat and pressure to said contact members, a terminal conductor secured within the smaller end of each contact member, and a body of plastic material moulded around and completely enclosing all of said parts except the projecting ends of said terminal conductors.

2,468,846
ELECTRIC LAMP AND SOCKET
Foster J. Trainer, Holly Hill, Fla.
Application May 14, 1948, Serial No. 27,130
6 Claims. (Cl. 176—32)



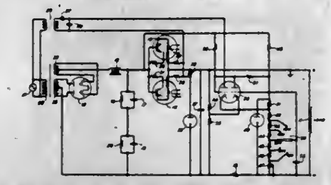
1. In combination, an electric lamp and a socket, said electric lamp comprising a glass envelop having a neck portion and a base member secured to said neck portion, said base comprising a symmetrical metal ferrule, an insulator, and a conducting tip element, said conducting tip element being axially spaced from said ferrule along the median line thereof, said ferrule having an annular groove spaced from said tip element, said socket including a plurality of gripping means affixed to a convex snap element, said snap element being in the form of an open geometrical figure to thereby admit the tip element and part of the insulator element of said lamp base and said gripping means adapted to spring inwardly when said snap element is depressed to thereby engage the base annular groove.

2,468,847
SNAP ACTION COUPLING DEVICE
Foster J. Trainer, Holly Hill, Fla., assignor to Disto Corporation, Holly Hill, Fla.
Application June 17, 1947, Serial No. 755,034
11 Claims. (Cl. 285—174)



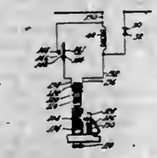
1. A snap action gripping device comprising, a strip of resilient material substantially circumscribing a closed geometric figure, and so disposed that a plane passing through all points of the outer periphery is laterally disposed a distance less than the width of said strip to a plane passing through all points of the inner periphery; finger portions affixed to the strip and uniformly spaced from the inner periphery of said closed figure, and portions of the closed figure extending inwardly of the finger portions in a plane substantially that of the portions of the closed figure from which they respectively extend, each finger being normal to its respective portion of the geometric figure, and inwardly directed prongs integral with the free end of said fingers and substantially normal thereto respectively.

2,468,848
SNAP ACTION COUPLING DEVICE
Foster J. Trainor, Holly Hill, Fla., assignor to Disto Corporation, Holly Hill, Fla.
Application July 14, 1947, Serial No. 760,761
10 Claims. (Cl. 285—174)



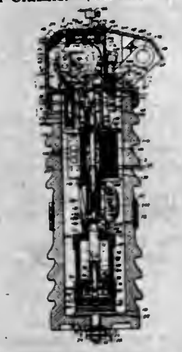
1. In combination, a plug and a socket, and a snap action gripping device, said socket having an interior surface defining a hollow space, and having an annular groove in the inner surface thereof in a plane normal to the longitudinal axis thereof, said snap action gripping device having a continuous base portion having an open center defined by an inner periphery; and said continuous base portion having an outer peripheral portion adapted to seat in said groove, fingers substantially normal to said base portion and integral therewith intermediate the inner periphery and the outer peripheral portion and having inwardly directed prongs on the free ends thereof; said plug having an extension portion adapted to pass through the open center of said snap action gripping device and terminating at the inner end in a shoulder portion, said shoulder being adapted to pass through said prongs when open and to abut the inner peripheral base portion; a groove in such plug member axially spaced from said shoulder a distance equal substantially to the length of said fingers, whereby axial motion of said plug toward the socket causes axial motion of said inner peripheral base portion thereby causing said fingers to move inwardly and said prongs to engage said groove.

2,468,849
DETACHABLE COUPLING
Foster J. Trainor, Holly Hill, Fla.
Application October 15, 1947, Serial No. 779,971
17 Claims. (Cl. 285—170)



1. In a detachable coupling device, a socket member, a plug member, and a snap action gripping device, said socket having an interior surface defining a hollow space, and having a plurality of bearing surfaces positioned tangentially to said hollow space in a plane normal to the longitudinal axis of said socket, a plurality of latch dogs journaled in said bearing surfaces, whereby the latch portion is adapted to swing toward and away from the axis of the socket, said latch dogs having opposed bifurcated portions, a snap ring seated in said bifurcations, and having two convex conditions of stability whereby said latch dogs have two conditions of stability which are open and latch positions.

2,468,850
VOLTAGE REGULATION
David E. Trucksess, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 18, 1947, Serial No. 729,297
5 Claims. (Cl. 323—22)

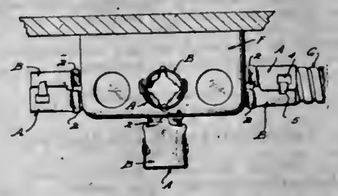


1. A voltage regulator for controlling the current supplied from a direct current source to a load to maintain the load voltage substantially constant comprising a regulator electronic device having an anode, a cathode and a control electrode and having its anode-cathode path connected in series in one side of the line connecting said source to a load terminal, an amplifier comprising a second electronic device having an anode, a cathode and a control electrode, means for deriving from said source a substantially constant voltage which is larger than the maximum load voltage, an anode current circuit connecting the anode and cathode of said second electronic device, means for obtaining a voltage proportional to the load voltage, means for obtaining a voltage proportional to the load current, means for impressing upon said anode current circuit a voltage having as components of opposite polarity therein said substantially constant voltage and said voltage proportional to load voltage a circuit connecting the control electrode and cathode of said second electronic device comprising in series a portion of said derived voltage, said voltage proportional to load voltage and said voltage proportional to load current, said voltage proportional to load current being in aiding relationship to one of said remaining voltages in said circuit and in opposing relationship to the other of said remaining voltages, and means for connecting the output voltage of said amplifier in a circuit connecting the control electrode and cathode of said regulator electronic device to control its anode-cathode resistance.

2,468,851
RECLOSING CIRCUIT INTERRUPTER
James M. Wallace, Braddock, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 7, 1944, Serial No. 517,327
19 Claims. (Cl. 175—294)

1. In an automatic reclosing circuit interrupter, separable contacts adapted to separate to open the circuit, means for automatically reclosing said contacts in response to a circuit interrupting operation thereof, electro-responsive means substantially instantaneously responsive to predetermined electrical conditions in the circuit for causing separation of said contacts, second electro-responsive means responsive to said predetermined conditions for causing separation of said contacts a predetermined time after the occurrence of said conditions, a single electrical control means connected in a circuit with both of said electro-responsive means for determining which one of said condition responsive means will be effective to cause separation of said contacts, and means actuated by said interrupter on each circuit opening operation of said contacts, for actuating said control means, whereby successive circuit interrupting operations may have successively different time characteristics.

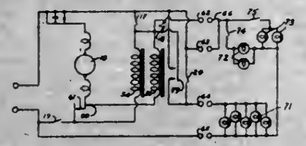
2,468,852
CIRCUIT INTERRUPTER
James M. Wallace, Braddock, Herbert L. Rawlins, Swissvale, and James M. Cumming and Wayne S. Aspey, Turtle Creek, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Original application June 24, 1941, Serial No. 399,452. Divided and this application November 1, 1944, Serial No. 561,384
4 Claims. (Cl. 200—87)



1. In a circuit breaker, a supporting casing having an open end and a closed end, a cover for the open end of said casing, means detachably securing said cover to said casing, a plurality of supporting frame members rigidly connected end to end and at one end to said cover so as to constitute supporting means extending into said casing, separable contacts mounted on at least one of said members so as to be engaged at one point along said supporting means, at least one of said members at another point along said supporting means defining a side opening, said one member having aligned apertures at opposite sides of said opening, a removable solenoid coil having a bore, said coil positioned in said opening with the bore thereof aligned with said apertures, a core guide tube extending freely through one of said apertures and freely through said bore into engagement with said one member at the opposite side of said opening to prevent removal of said coil, a core for said coil mounted for movement through said tube, said core operatively associated with one of said contacts to actuate the same, and at least another of said frame members detachably secured to said one member at the end thereof having said one aperture and having a portion overlying the adjacent end of said guide tube to prevent withdrawal thereof.

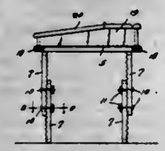
2,468,853
ABRASIVE WEB MATERIAL
John A. Williamson, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a corporation of Delaware
Application September 15, 1944, Serial No. 554,273
11 Claims. (Cl. 51—294)

1. A method of making flexible fibrous abrasive webs which comprises forming a thin aqueous suspension of fibrous material, the fibers of which are of wet-feltable length, depositing said suspension on a foraminous support as a highly aqueous fibrous web, introducing a sufficient amount of abrasive particles and an adhesive binder into the interior of said web while said web is on said foraminous support and while said web is highly aqueous and uncompacted to provide an abrasive particle content of 70–85% by weight based on the dry weight of the fibrous web, said abrasive particles being distributed internally throughout the thickness of the web structure as a result of being applied to the web while the latter is still highly aqueous and uncompacted, extracting water from the highly aqueous web to felt the fibers about the abrasive particles, and drying and compacting the felted web to the desired density.



2,468,854
BOX CONNECTOR FOR FLEXIBLE ELECTRICAL CONDUITS
William R. Woodring, Van Nuys, Calif.
Application May 10, 1946, Serial No. 668,748
2 Claims. (Cl. 285—6.5)

1. In a connector for fastening a terminal of a conduit to a fixture having an opening therein, a pair of substantially semi-cylindrical connector sections having certain corresponding ends outwardly flared to form retaining flanges adapted to project through said opening for contact with the inner surface of said fixture to prevent withdrawal of said sections from said opening, one of said sections having openings therein, bendable tongues carried by the other of said sections and loosely extended through said openings and bent outwardly at their free ends so as to prevent withdrawal of said tongues while loosely connecting said sections to one another subject to adjustment to bring the flared ends closely together to permit of insertion thereof through said opening with the other ends spaced apart whereby a conduit may be inserted between and held by said sections, said tongues being bendable into position to hold the sections in conduit clamping position, and co-acting bearing portions on said sections arranged to contact one another when adjusting and moving said sections to fit

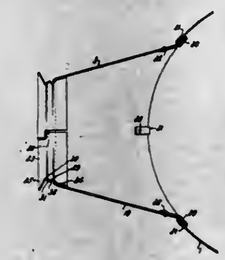


in the opening and when applying to the sections a tool which is manipulated to force the section tightly together and bend the tongues into position for holding the sections clamped on the conduit and holding the flared ends in locked contact with said fixture.

2,468,855
AUTOMATIC TIMER
Henry L. Abrahamse and John E. Hewitt, Lansing, Mich., assignors to Abrams Instrument Corporation, Lansing, Mich., a corporation of Michigan
Application September 8, 1945, Serial No. 615,200
2 Claims. (Cl. 175—320)

1. An automatic timer comprising a support, a unidirectional electric motor mounted on said support, oscillatory switch operating means mounted on said support, means including a clutch adapted to connect said motor to said switch operating means, electro-magnetic means mounted on said support and associated with said clutch for engaging and disengaging the latter, a circuit for said electro-magnetic means including a relay switch, a relay coil associated with said relay switch for closing the latter when said relay coil is energized, and a circuit for said relay coil including a switch mounted on said support and associated with said oscillatory switch operating means, said last named switch being adapted to be opened by said oscillatory switch operating means in one position of oscillation thereof.

2,468,856
COMBINED TABLE AND DESK FOR CHILDREN
John A. Alexander, Berkeley, Calif.
Application October 9, 1944, Serial No. 557,864
1 Claim. (Cl. 311—3)

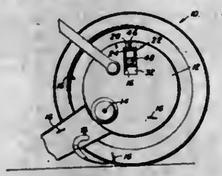


In a child's article of furniture, the combination with a table top having side edges, of a plurality of sockets formed in said top around marginal portions thereof, a vertically-extending closed frame having an open bottom, depending studs on said frame and detachably seating in said sockets whereby said top comprises a bottom for said frame, and a hinged top for said frame.

2,468,857
PROCESS OF MAKING SPHEROIDAL GEL PARTICLES
John A. Anderson, Chicago, and Vanderveer Voorhees, Homewood, Ill., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application November 29, 1945, Serial No. 631,769
6 Claims. (Cl. 252—448)

1. The process of making solid spheroidal particles of an inorganic oxide gel which comprises spraying an inorganic oxide sol, capable of gelling, into an atmosphere of condensable vapor substantially free of noncondensable gases, forming said sol into spheroidal droplets within said atmosphere and, while said droplets are still liquid, condensing vapors included therewithin, maintaining said droplets in suspension for a period of time sufficient to permit gelling and thereafter drying the resulting gel particles.

2,468,858
OUTLET FOR HUMIDIFYING DUCTS
Agnew H. Bahnson, Jr., Winston-Salem, N. C.
Application August 9, 1944, Serial No. 548,764
9 Claims. (Cl. 98—40)

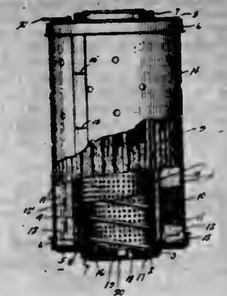


1. An outlet of the type described which comprises a sleeve having the general shape of a truncated cone having one substantially straight side and an opposite side tapered towards the outlet, a flaring flange at the inlet end of said sleeve and a collar mounted at the discharge end of said sleeve, said collar having an outwardly flaring flange and an inwardly extending annular rib circling the outlet adjacent said flange and forming the most constricted point of said outlet.

2,468,859
PREPARATION OF DERIVATIVES OF CHOLESTEROL
Austin Ernest Bide, Ralph John Nicholls, and Peter Alfred Wilkinson, London, England, assignors to Glaxo Laboratories Limited, Greenford, England, a British company
No Drawing. Application March 10, 1947, Serial No. 733,723. In Great Britain March 25, 1946
7 Claims. (Cl. 260—397.2)

1. A process for the preparation of 7-bromo-derivatives of carboxylic acid esters of cholesterol which comprises reacting in a solvent a carboxylic acid ester of cholesterol with a compound selected from the group consisting of N-bromobenzamide, N-bromo-m-nitrobenzamide, N-bromo-p-nitrobenzamide and N-bromo-3:5-dinitrobenzamide.

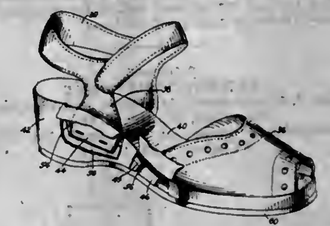
2,468,860
MOWER SHARPENER
Everett M. Bretz and Mary V. Bretz, De Ridder, La.
Application January 16, 1948, Serial No. 2,746
3 Claims. (Cl. 76—82.1)



1. A lawn mower sharpener comprising a pair of opposed substantially channel shaped supports mountable on the wheel supporting frame of a lawn mower, said supports being open on one side to provide guide openings, a file having end portions received in said guide openings and slidably mounted in said supports, spring means mounted in said supports for holding said file, resilient pads carried by said supports frictionally engaging the upper periphery of said file, means slidably mounted in said supports for holding said pads, and means for adjusting said pads against said file.

2,468,861
PRODUCTION OF CHLORAL ALCOHOLATE
Walter Bridge, Birkenhead, and James Matchet, Liverpool, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application November 16, 1944, Serial No. 563,800. In Great Britain December 20, 1943
6 Claims. (Cl. 260—615)

1. A process for the production of chloral alcoholate, which comprises chlorinating ethyl alcohol in a continuous manner by flowing ethyl alcohol through a plurality of vessels arranged in series while continuously introducing chlorine into each of said vessels below the surface of the liquid therein, separately controlling the temperature in each vessel, the first vessel in the series being maintained at a temperature not substantially greater than atmospheric, and collecting the reaction product which overflows from the last vessel in the series.

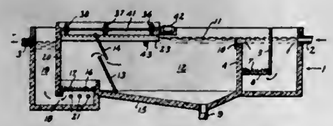


2,468,862
FLUID FILTERING ELEMENT
Southwick W. Briggs, Washington, D. C.
Application October 22, 1943, Serial No. 507,291
7 Claims. (Cl. 210—169)

5. A filtering unit for assembly in a clarifier having a tube for discharging clarified material comprising a foraminous core adapted to be positioned in the clarifier surrounding the discharge tube, a circular end plate concentrically engaging each end of the core and extending radially beyond the periphery thereof, each of said end plates having a central aperture therein, a second apertured plate attached to a surface of each of the end plates and having the aperture in alignment with the aperture of the end plate, said second apertured plates being spaced from the end plates at the aperture, a resilient annular member having an inner diameter less than the diameter of said apertures positioned between each of said end plates and second apertured plates for engaging said discharge tube, and a tubular filtering body surrounding the core and

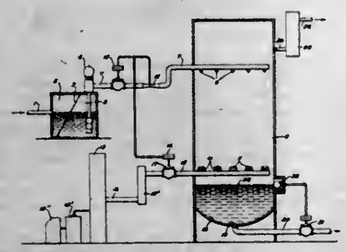
having its opposite ends secured to said end plates.

2,468,863
SHOE AND BOTTOM MEMBER
Francis A. Burns, Townsend, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application February 1, 1947, Serial No. 725,904
2 Claims. (Cl. 36—19.5)



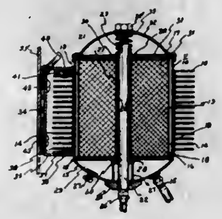
2. A composite bottom member for use in slip-lasted shoes consisting of a platform midsole to which is secured a substantially rigid wedge heel member, said composite bottom member being provided with shallow recesses in its peripheral edge face in the shank portion thereof for the reception of tabs formed at the rear edges of a vamp to be attached to the forepart of the bottom member and being also provided with recesses near the breast line of the heel for the reception of tabs formed at the lower ends of quarter straps to be attached to the rear part of the bottom member, the recesses at the shank portion of said bottom member extending from the top surface to the bottom surface thereof so that the tabs of the vamp may be folded over the edge face and beneath the bottom member without projecting beyond the edge face thereof, and the recesses at the breast line terminating midway between the top and bottom surfaces of said rigid heel member.

2,468,864
SEWAGE TREATMENT AND OIL AND WATER SEPARATION
Warren M. Campbell, Winthrop, Mass.
Application December 29, 1945, Serial No. 638,271
7 Claims. (Cl. 210—5)



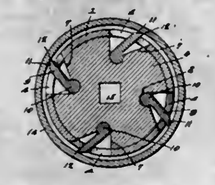
1. A system for water and sewage treatment and oil separation, comprising an elongated tank

having an inlet pipe at one end and an outlet pipe at the other end, a set of spaced baffle walls at the inlet end, the first extending downward from the top of the tank and the second upwards from the bottom of the tank, a filter bed extending across the space between said baffle walls whereby the flow is upwards through the filter bed and over the second baffle wall, a second set of spaced baffle walls in the path of flow to the outlet pipe near the outlet end of the tank, the first of said second set of baffle walls extending from the bottom of the tank upwards across the path of



flow and the other of said second set extending from the top of said tank downward therein, a second filter bed extending across the space between said second set of baffle walls whereby the flow is downward through said second filter bed, the liquid flow from the first to the second set of baffle walls being slow and the space comparatively long permitting the oil gradually to rise to the surface in the region of the second set of baffle walls, means for removing the oil from the water in said region and means for draining the sludge from the bottom of the tank.

2,468,865
SEWAGE TREATMENT
John J. Campobasso, Arlington, and Warren M. Campbell, Winthrop, Mass.
Application December 29, 1945, Serial No. 638,270
3 Claims. (Cl. 210—2)



1. A system for sewage disposal comprising in combination a separation tank having a sewage inlet, a purification tower, having purifying gas nozzles in the bottom portions thereof for directing the purifying gases upwards and spray nozzles in the top portion thereof for directing the sewage water to be purified downwards, means for pumping the sewage water from the separation tank to the spray nozzles, means for supplying the purifying gases to said gas nozzles, an outlet means for exhaust gases at the top section of said tower above the position of the spray nozzles, an outlet means for the purified waters below the level of the gas nozzles and means for maintaining the level of said waters below that of the gas nozzles.

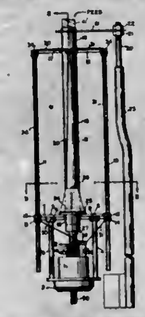
2,468,866
OIL FILTER AND COOLER
William S. Collier, Danville, Ill.
Application September 21, 1945, Serial No. 617,809
1 Claim. (Cl. 210—122.5)

An oil filter and cooler comprising a body having a cylindrical portion opened at one end and having a concave closure on the other end, a cylindrical container having a filter space for containing filtering material within said container, filtering material in said filtering space, said container extending coextensively with the cylindrical portion of said body and having its outer wall spaced from the inner wall of the body to form a first annular space, relatively small openings in the outer wall of the container connecting said filter space with the first annular space, said container also having an inner opening therethrough coextensively and concentric with the first annular space, the walls of said inner opening having relatively small openings therein connecting said filter space with said inner opening, the end of the container and the concave closure of the body forming therebetween a space for an oil reservoir, an oil inlet through said concave closure connecting with said oil reservoir space, a pipe through said inner opening of said container closed the one end and the other end extending through the concave closure forming an oil outlet, said pipe being smaller in diameter than said inner opening of said container thereby forming a second annular space concentric with the first annular space, an opening in said pipe connecting with said second annular space, a support for said container positioned around said pipe and resting on the concave closure end of said body, a gasket on said support positioned tightly around said pipe to seal off said second annular space from said oil reservoir space, a second gasket positioned tightly around said pipe for sealing off the other end of said second annular space, a concave lid for the opening in said body, means for attaching said lid to said body through a threaded connection associated with and engaging said lid and said closed end of said pipe, a spring in said lid for holding said gaskets tightly against said container, a plurality of cooling fins fixedly attached around the outer circumference of said body and extending radially outward from said body and a support for holding said body in operative position comprising a plate support member detachably attached to said body, an L-shaped support member fixedly attached to a frame member of the internal combustion engine, said second support member being detachably attached to said body by pins in the horizontal leg of said L-support, said pins engaging openings in a plate attached to said body, the plate support member and the L-shaped support member being detachably connected by having alternating lugs on each member with aligned holes in the lugs to receive a pin, and a pin through said holes for detachably connecting said supporting members, said pin being the only removable part required to be detached for removing said filter from said support.

2,468,867
INTERNAL EXPANDING PIPE WRENCH
Elvin B. Collins, Calvert, Tex.
Application December 12, 1944, Serial No. 567,828
1 Claim. (Cl. 81—72)

An inside wrench comprising a rim having an inwardly projecting flange at one side constituting an abutment, a removable ring joined to the opposite side of the rim, there being circumferentially spaced openings in the rim extending through that side of the rim carrying the ring, a body circular in cross section within the rim and held thereto by the flange and ring, angular recesses in the periphery of the said body positioned to register with the openings in the rim, one wall of each recess being radially disposed relative to the axis of the body and the other wall being angularly disposed with respect to said first-mentioned wall, there being rounded seats at the inner ends of the recesses, dogs mounted for swinging movement in the respective recesses and in respective openings, said dogs having substantially cylindrical bearing portions at their inner ends located in the rounded seats, the outer ends of the dogs being provided each with a biting edge along that side of the dog remote from the radial side wall of the recess in which the dog is mounted, said biting edges being positioned for gripping engagement with the inner surface of the work when the wrench is seated therein and rotated relative to the work, there being an opening in the body for the reception of an actuating tool, the radial side walls of the recesses constituting stops engageable with the dogs, whereby, if the dogs are engaged by said side walls, the biting edges will be retained in gripping engagement with the work.

2,468,868
GLASS OF VERY RAPID FUSION AND HIGH POINT OF TRANSFORMATION
André Danzin and Edouard Despois, Paris, France, assignors to Societe Francaise Radio-Electrique, a corporation of France
No Drawing. Application May 13, 1947, Serial No. 747,836. In France December 27, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires December 27, 1965
2 Claims. (Cl. 106—53)



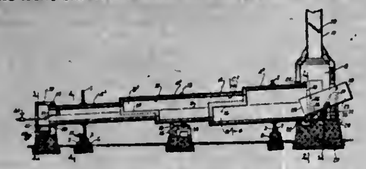
1. A glass of low expansion, low temperature of fusion, relatively high temperature of softening and high fluidity at temperatures a little above that of softening having a composition within the following table:

	Percent
SiO_2	34 to 38
PbO	24 to 30
B_2O_3	20 to 26
Al_2O_3	3.5 to 5.5
ZnO	8 to 9

2,468,869
ORGANOSILICON COMPOSITIONS AND METHODS OF MAKING THEM
William Herbert Daudt, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application February 15, 1946, Serial No. 648,001
5 Claims. (Cl. 260—448.2)

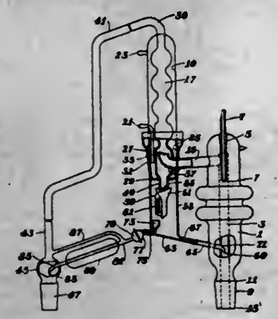
1. A composition of matter comprising a major proportion of a liquid polymeric organo siloxane having on the average more than 10 silicon atoms per molecule, in which all the organic radicals are methyl radicals, there being at least 2 methyl radicals attached to each silicon atom, and a minor proportion in amount of at least 10 percent by weight of an organo siloxane having on the average less than 6 silicon atoms per molecule, each silicon atom thereof having at least 2 hydrocarbon radicals attached thereto, in which latter organosiloxane the hydrocarbon radicals are both methyl and phenyl radicals.

2,468,870
MEANS FOR MANUFACTURE OF RUG BRAIDS
Seymour Eskow, Taunton, Mass.
Application July 19, 1946, Serial No. 684,699
5 Claims. (Cl. 66—9)



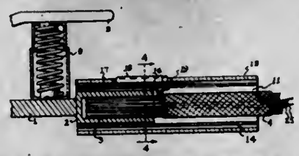
1. Means for manufacturing a cord having a knitted cover and a soft yarn filler, comprising in combination a circular knitting machine having a knitting mechanism, including a rotating frame, by which the cover is made, said rotating frame including a tube through which the yarn filler is drawn, the tube having its axis concentric with that of the rotating frame and with one end thereof adjacent thereto, said tube having an internal diameter of the size such that the yarn contacts said end and twists therewith as the tube is rotated, and means connecting the tube with the rotating frame for rotating them together.

2,468,871
ROTARY DRIER
George P. Forni, Emeryville, Calif.
Application June 17, 1944, Serial No. 540,810
3 Claims. (Cl. 34—137)



1. In a rotary dryer, a rotatable tube inclined downwardly from the inlet to the outlet end, means for rotating the tube for causing material received at the inlet end to gravitate toward the outlet end of the tube, means for directing heated air through the tube, said tube being divided into a plurality of interconnected sections of progressively reduced diameters from the inlet to the outlet end, the axes of all of the sections being

aligned with the axis of rotation of the tube, each section except the outlet end section having semi-cylindrical portions of the same radius as its respective section extending an appreciable distance into the next smaller diameter section, the said next smaller diameter section having a cut out portion communicating with the semi-cylindrical portion of the next larger section, the overlapping of the semi-cylindrical portion into the next smaller section forming a pocket with a

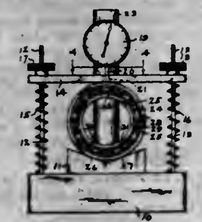


semi-circular step at its juncture with the smaller section and two longitudinally extending and diametrically opposed shoulders that extend throughout the length of the pocket, each pocket causing its longitudinal shoulder to lift the material thereon and empty it into the next section when the rotation of the tube is in a position to dispose the pocket in the upper tube half, the material in dropping from the shoulder by gravity, passing through the tube interior and thus being heated.

2,468,872
DISTILLING HEAD
Albert W. Goldsbarry, Northbrook, and Howard S. Martin, Glenview, Ill., assignors to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
Application January 1, 1945, Serial No. 570,978
4 Claims. (Cl. 202—185)

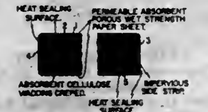
1. A glass distilling head comprising, an insulated vapor passageway adapted to fit tightly on the top of a fractional distilling column, a condenser having a condensate outlet at the bottom thereof, a condensate receiving section below said condensate outlet and connected to said condenser means for passing vapor from said passageway directly to the bottom of said condenser above said outlet and bypassing said condensate receiving section, a pressure equalization line connecting the top of said condenser to said condensate receiving section a swingable funnel in said condensate receiving section positioned to permit the entire condensate from said condenser to pass therethrough, means for returning condensate from said funnel to the fractional distilling column, means to conduct condensate from said funnel to a collecting vessel, means to change the position of said funnel in order to permit said funnel to deliver condensate to either said vessel or to said fractional distilling column.

2,468,873
WELDING ELECTRODE HOLDER SWITCH
Sidney M. Harvey, Detroit, Mich.
Application September 1, 1948, Serial No. 47,280
3 Claims. (Cl. 200—157)



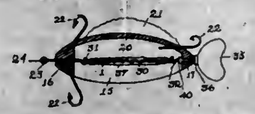
1. In a switch for a welding electrode holder, inner and outer insulating members, a pair of spaced contacts fixed on the inner insulating member, an elongated resilient bridging conductor interposed between said members and having its end portions seating on the inner member and its mid portion normally sprung against the outer member and clear of said contacts, and a push button secured to said mid portion for springing such portion against the contacts, the outer member being apertured to receive and confine said button, whereby said conductor is maintained in operative relation to the contacts.

2,468,874
TORSION DRIVEN TOOL
Karl G. R. Hawkins, Park Ridge, Ill.
Application November 7, 1946, Serial No. 708,322
1 Claim. (Cl. 77—71)



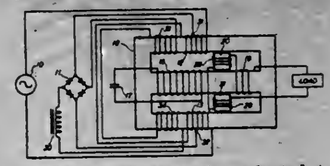
A torsion tool comprising a body having a cutting portion and a cylindrical shank adapted to be engaged by a standard rotary 3-jaw chuck, the major area of said shank presenting an unbroken cylindrical surface for engagement by the chuck jaws, and a small torsion key lug swaged up from said cylindrical surface and projecting from said surface intermediate the ends thereof, said lug being substantially shorter than said cylindrical surface and of a width and extent less than the spacing between adjacent jaws of the chuck when tightened against the cylindrical surface so that the lug can be received freely in such space to limit torsional slippage of the chuck jaws.

2,468,875
RADIAL CLEARANCE GAUGE
Karl E. Henriksen, Indianapolis, Ind.
Application February 14, 1946, Serial No. 647,466
5 Claims. (Cl. 33—174)



1. The method of determining radial clearance in a bearing between inner and outer races and rolling elements therebetween which comprises applying a yielding load radially of the outer race to an amount which will just give a perceptible variation in the over all diameter of said outer race as the inner race is rotated to carry a rolling element past the zone of load application; rocking the inner race to carry a rolling element into the zone of said load application and measuring the difference between the initial unloaded outer race position and the loaded position thereof with said element in said zone.

2,468,876
SANITARY PAD
William A. Hermanson, Boston, Mass.
Application April 30, 1945, Serial No. 590,979
6 Claims. (Cl. 128—290)



1. A sanitary napkin pad comprising a plurality of layers of highly absorbent cellulose creped sheets forming a wadding, an enclosing paper web wrapper permeable to moisture having wet strength and substantially no capillary action, said wrapper being of a duplex web, the exposed faces of which are composed of fibres having no heat sealing properties, the inner faces of which are formed with fibres having heat sealing properties whereby said wrapper is bonded to said wadding on its anterior and posterior faces.

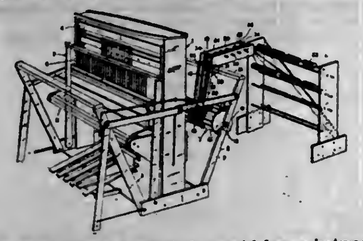
2,468,877
FISH BAIT
William P. Horton, Newburyport, Mass.
Application October 6, 1947, Serial No. 778,166
1 Claim. (Cl. 43—43)

In a fish bait, a twisted rubber strand and a water soluble glue coating formed on said strand, whereby to cause said strand to simulate the motions of a live bait when immersed in water.

2,468,878
FREQUENCY REDUCER
Henry M. Hage, Lorain, Ohio, assignor, by mesne assignments, to Lorain Products Corporation, Lorain, Ohio, a corporation of Ohio
Application July 19, 1945, Serial No. 605,969
15 Claims. (Cl. 172—281)

15. A subharmonic generator adapted to be energized by a source of alternating current and to generate a frequency which is an even subharmonic of the frequency of said source, said generator comprising magnetic core means, a primary circuit and a second circuit, said primary and said secondary circuits comprising at least three windings on said core means, said primary circuit being adapted to be energized by said source for magnetizing said core means, said primary and secondary circuits being disposed to provide a substantially conjugate relationship therebetween, biasing means adapted to supply unidirectional current to said primary circuit, said primary circuit and said biasing means exciting at least a portion of said magnetic core means to a saturated condition, said biasing means comprising a rectifier and circuit means for energizing said rectifier with voltage of the source frequency and with subharmonic voltage, and a capacitor connected to the secondary circuit, said capacitor in cooperation with said primary and secondary circuits and said magnetic core means exciting subharmonic oscillations in the secondary circuit when the said at least a portion of said core means is saturated by the combined effect of said biasing means and said primary circuit.

2,468,879
SKI BINDING
Hjalmar Hvam, Portland, Oreg.
Application January 29, 1948, Serial No. 5,139
4 Claims. (Cl. 280—11.35)

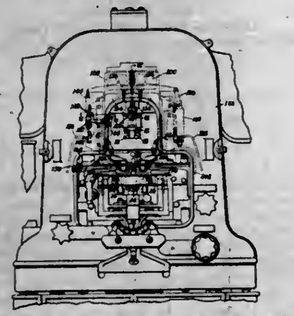


3. Shoe positioning means for positioning a skier's shoe on a ski, consisting of two plates superimposed one upon the other, means formed in one of said plates to be received by means formed in the other plate for adjusting the plates longitudinally with respect to each other, and means for securing said plates in engagement with each other and both of said plates in pivotal attachment to the ski.

2,468,880
WARP TENSIONING DEVICE
Nellie S. Johnson and Albert F. Sargent, Detroit, Mich.; said Sargent assignor to said Johnson
Application May 24, 1948, Serial No. 28,784
4 Claims. (Cl. 28—35)

2. A device for tensioning warp threads being wound upon a warp beam of a loom, comprising

a frame adapted to be mounted on the rear rail of the loom, guide elements for the warp threads mounted on said frame, tensioning means for

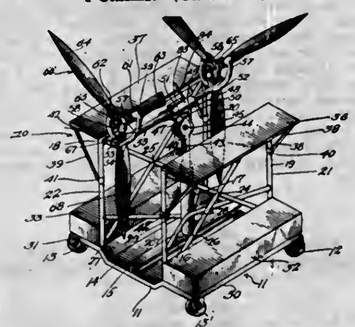


the warp threads mounted on said frame between said guide elements and a guide for the warp threads between said frame and the warp beam, said guide being secured to said frame.

2,468,881
MANUFACTURE OF 3-TETRAHYDROFURANONE
Alan Woodworth Johnson, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application August 19, 1946, Serial No. 691,651. In Great Britain August 31, 1945
3 Claims. (Cl. 260—345)

1. Process for the manufacture of 3-tetrahydrofuranone which comprises heating 2-butine-1,4-diol with a mercury salt of an amide at the reflux temperature of the reaction mixture in the substantial absence of water.

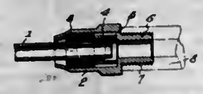
2,468,882
LASTING MACHINE
Bernhardt Jorgensen, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application February 19, 1947, Serial No. 729,568
33 Claims. (Cl. 12—10.5)



12. In a lasting machine, grippers for gripping the margin of an upper mounted on a last and for pulling the upper at the opposite sides of the toe respectively in locations near portions of the upper extending inwardly over an insole on the last at the sides of the forepart beyond the toe, said grippers each comprising a pair of upper-gripping jaws relatively movable to grip the upper between them, members movable properly to position the upper between the jaws of said grippers before it is thus gripped by engagement with portions of its margin located between said grippers and the portions of the upper extending inwardly over the insole, supports for said members relatively to which they are thus movable, said supports being movable relatively to each other widthwise of the shoe and having means thereon for engaging the sides of the shoe to position said members widthwise of the shoe as determined by such engagement, and cylinder-and-piston devices on said supports for operating said members by fluid pressure.

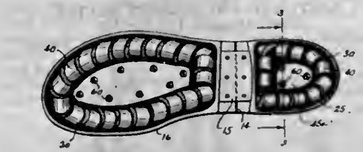
2,468,883
AIRPLANE WING
Roland A. La Pointe, Bangor, Maine
Application January 3, 1946, Serial No. 638,765
5 Claims. (Cl. 244—13)

1. An aircraft including a low aspect ratio wing, and chordwise extending nacelles, enclosing propulsion means, mounted on each wing tip and coextensive therewith in a chordwise direction, said wing comprising a substantially continuous and flat lower surface, forward and rear cambered upper surfaces, and tapered leading and trailing edges, said cambered upper surfaces being arranged spaced from both tapered leading and trailing edges and spaced from one another in a chordwise direction.



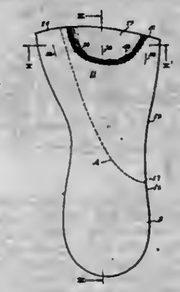
2,468,884
PROPELLER DOLLY
Louis L'Esperance and Hubert A. Schneider, Madison, Wis.
Application May 12, 1945, Serial No. 593,404
4 Claims. (Cl. 214—1)

1. Apparatus for use in handling aircraft propellers which includes a mobile platform having a longitudinal trough in its bottom, a frame rising from the platform adjacent each longitudinal side edge of the trough, a shelf at the upper edge of each side frame adapted to extend outwardly therefrom to support workmen engaged in mounting and demounting propellers with relation to



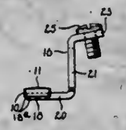
the engines mounted in aircraft, a power lift mounted on the platform intermediate the sides and ends of the trough to move vertically between the frames and propeller cradles carried by the power lift and movable therewith between the ends of the frames.

2,468,885
PIPE JOINT
John Lubbock, London, England
Application March 20, 1946, Serial No. 655,820
In Great Britain February 2, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires February 2, 1965
1 Claim. (Cl. 285—90)



A fluid-tight seal for connecting a pipe and a union member, comprising a cylindrical sleeve of elastic material normally of substantially uniform diameter from end to end embracing one end of said pipe and having an internal diameter normally smaller than the external diameter of the latter, a comparatively rigid expander member having a larger diameter than that of the pipe and adapted to surround the end of said pipe with a portion of said sleeve interposed therebetween, said sleeve being turned back on itself to overlie a portion of said expander member, and a casing surrounding said turned back sleeve and expander member and provided at one end with an extension forming a part of said union member, the casing being so dimensioned with respect to said expander member that that portion of the sleeve which lies between the casing and exander is always under compression diametrically.

2,468,886
SHOE SOLE
William J. Lutey, Seattle, Wash.
Application May 24, 1947, Serial No. 750,181
5 Claims. (Cl. 36—29)

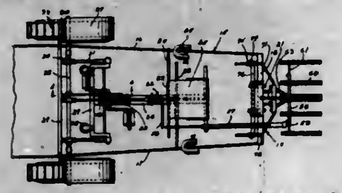


1. A tread for shoes and the like comprising a base member having a continuous, downwardly opening channel formed therein about its peripheral portions and a replacement tread member comprising a flat metal plate adapted to be disposed against the island portion of said base member that is enclosed within the continuous channel, means for detachably securing the said plate to the island portion; said plate having its peripheral portion bent upwardly into the channel adjacent its inner wall and formed with a horizontal flange that overlies the base surface of the channel and a resilient tread strip fixed on said flange and held seated in said channel thereby and extending from the channel beyond the undersurface of the base member.

2,468,887
METATARSAL AND OUTER LONGITUDINAL ARCH SUPPORT
Edward F. Malouf, San Jose, Calif.
Application February 1, 1947, Serial No. 725,771
3 Claims. (Cl. 36—71)

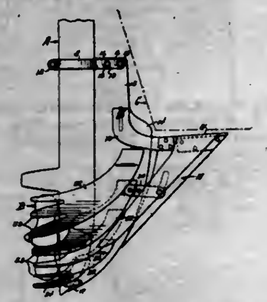
1. A metatarsal and outer longitudinal arch support comprising a substantially triangular-shaped cushion having the base of the triangle extending under the second, third, fourth and fifth metatarsals of the foot for raising them to the proper elevation with respect to the first metatarsal, and the apex of the triangle extending under the outer longitudinal arch, the portion of the triangle underlying the heads of the second, third and fourth metatarsals being recessed to relieve any pressure thereagainst.

2,468,888
METAL-BACKED NONWELDING CONTACT
Harold L. Mekelburg, Milwaukee, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application September 25, 1944, Serial No. 555,646
10 Claims. (Cl. 200—166)



1. A molded contact comprising an active part of non-welding material and a backing therefor of fusible metal integrally united therewith, said backing comprising a thin layer of said metal to provide for attachment of the contact to a metal support by welding or brazing, and said contact being so shaped as to provide a receptacle between the same and the metal support for all excess of fused metal or brazing material, thereby to guard against flow of the fused metal or brazing material onto said active part of the contact.

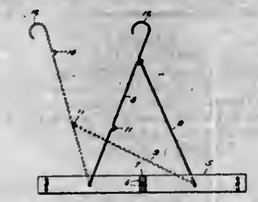
2,468,889
PORTABLE PROPELLING APPARATUS FOR SMALL FISHING CRAFT
Anthony Montalbano, Baton Rouge, La.
Application May 1, 1947, Serial No. 745,276
6 Claims. (Cl. 115—25)



1. A portable propelling apparatus for boats and the like comprising a longitudinally adjustable frame adapted to extend along the center of the boat, a U-shaped member connected to the forward end of the frame and extending

upwardly therefrom, attaching devices on the U-shaped member for detachably connecting the frame to the bottom of the boat, arms connected to the upper end of the U-shaped member for pivotal movement in a vertical plane, a shaft journalled on the free ends of the arms and

extending across the boat, water wheels fixed to the shaft and adapted to extend into the water at the opposite sides of the boat, and means for retaining the arms and the shaft in any one of several vertically adjusted positions whereby to effect the adjustment of the water wheels to different depths within the water.

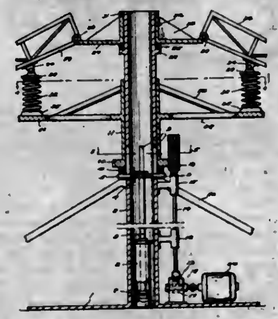


2,468,890.
PROPELLER GUARD AND DEFLECTOR FOR OUTBOARD MOTORS
Rockford W. Moore, Wichita, Kans.
Application April 2, 1946, Serial No. 659,070
2 Claims. (Cl. 115—42)

1. A guard for a motor boat propeller assembly having a hanger bracket with a propeller supported thereby, comprising a deflector wing forward of the bracket and propeller, means for detachably connecting the wing parallel with the bracket and upstanding thereto a vertically swinging linkage connecting said bracket to said wing at the lowermost portion thereof to permit said wing to be detached from said bracket and an adjustable fin aligned with the wing in a forward direction thereto to prevent shedding toward the bottom of the boat, and a plurality of vertically spaced, outwardly, downwardly, rearwardly curved shields at opposite sides of the wing for partially caging the propeller and bracket, and finger formations at the outer free ends of the shields.

2,468,891
CLOTHES DRIER
Joseph B. Neiser, Oakland, Calif.
Application January 14, 1947, Serial No. 721,908
1 Claim. (Cl. 211—113)

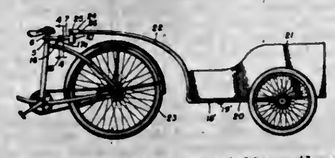
A portable article drying rack, comprising a frame, including a central spacing bar, end bars removably connected with the central spacing bar at the ends of the spacing bar, elongated hook members pivotally connected to the transversely extended end bars at one side of the central spacing bar, brace rods pivotally connected to the transversely disposed end bars at the op-



posite side of the central spacing bar and cooperating with means on the hook bars in securing the hook bars in various angular positions of adjustment with respect to the transversely disposed end bars, and lines connecting the transversely disposed end bars, on which articles are adapted to be secured.

2,468,892
SUPPORTING GIRT
George W. O'Keeffe, Elkins Park, Pa., assignor to Procter & Schwartz, Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application February 5, 1948, Serial No. 6,538
5 Claims. (Cl. 34—240)

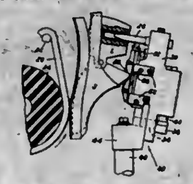
1. A girt structure for supporting web and strip goods comprising an elongated tubular member of relatively heavy gauge coarse wire mesh, and an outer sleeve of relatively coarser open mesh construction on said member composed of substantially heat-resistant and thermally low conductive material.



2,468,893
AIRPLANE AMUSEMENT DEVICE
Albert Orance, Chicago, Ill.
Application March 19, 1946, Serial No. 655,493
5 Claims. (Cl. 272—36)

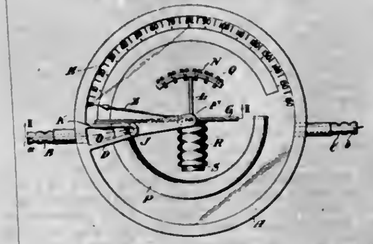
1. An airplane amusement device including a base having an upstanding cylindrical support

thereon, a collar formed with a peripheral flange on its lower end rotatably mounted on the upper end of said support, a plurality of girders hinged at their inner ends to said peripheral flange, airplanes supported on the outer ends of said girders, a vertically adjustable collar rotatably mounted on said cylindrical support in spaced relation below said first-mentioned collar being movable toward and away from the same and formed with a concentric supporting ring tied to said collar by means of radial arms and bracing rods, coil springs seated on said ring with their upper ends positively attached to said girders for resiliently supporting the same and for providing the driving connection between said lower collar and said girders, a gear formed about the lower end of said lower collar, an elongated driving gear intermeshed therewith, means for rotating said driving gear, and means for raising and lowering said lower collar and ring to raise and lower said connected girders for elevating and lowering the airplanes with respect to the ground as the airplane amusement device is operated.



2,468,894
BICYCLE TRAILER COUPLING
Willard R. Peek, San Antonio, Tex.
Application April 5, 1947, Serial No. 740,049
4 Claims. (Cl. 280—204)

4. In a bicycle, a sleeve insertable on the seat-post of a bicycle, a set-screw carried by said sleeve adapted to bear against the seat-post, a second vertically positioned sleeve, closed at its lower end and having a slot therein, a connecting bar between said sleeves, an adjustable split collar carried by said bar, a pair of adjustable brackets carried by the bicycle frame and adjustably connected to the ends of said collar for supporting the connecting bar in a horizontal position, a handle carried by the trailer, the outer end of said handle extending above the rear wheel of said bicycle, and a flat vertical coupling pin pivotally connected to the front end of said handle, said coupling having its lower side edges notched out to provide means for engaging the side edges of the slot in the closed end of said second named sleeve whereby the pin is rotatable horizontally.

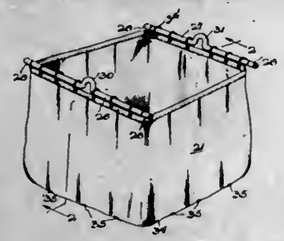


2,468,895
LAST SUPPORT FOR LAST INSERTING MACHINES
John William Pratt, Leicester, England, assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application August 29, 1947, Serial No. 771,193
In Great Britain September 21, 1946
7 Claims. (Cl. 12—15)

7. A machine for mounting shoe units on lasts comprising, a driven friction tool engageable with the bottom of a shoe unit loosely mounted on a last in extended condition, a support for the last including a block, a last pin projecting from the block adapted for binding engagement with the thimble of the last, a plate affixed to said block on the side from which said last pin projects having serrations extending transversely of said block, a member having a V-shaped notch adapted to engage the front cone of the last, said notch extending widthwise of the last to seat the cone tip, a plate secured to said member having serrations adapted to cooperate with the aforementioned serrations, spring pressed plungers associated with said block for yieldingly holding one

of said serrated plates out of engagement with the other, and means for limiting movement of said member relatively to said last pin, and a yieldable slide on which said support is pivotally mounted for maneuvering the shoe unit bottom in operative engagement with the friction tool, said support serving to maintain the last in extended condition.

2,468,896
INSTRUMENT FOR MEASURING AND INDICATING THE INTENSITY OF GAS CURRENTS
Wilhelm Rohn, Hanau on Main, Germany; vested in the Attorney General of the United States
Application April 28, 1941, Serial No. 390,768
In Germany April 15, 1940
4 Claims. (Cl. 73—210)



1. An instrument for measuring and indicating the intensity of a gas current and reducing the measurement to indications of rate of flow at normal conditions of temperature and pressure, comprising a casing having a wall having an orifice through which the fluid to be metered flows, a shaft rotatably mounted in said casing, a lever carried by the shaft, a damming body carried by the lever and cooperating with said orifice to be responsive to the rate of flow, a weighted bimetallic strip connected with said lever to compensate for temperature changes, and a weighted corrugated tube, closed at both ends and connected with said lever to compensate for pressure changes, and indicating means including a movable member carried by the shaft.

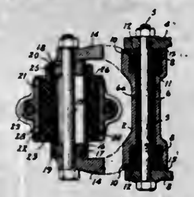
2,468,897
MAILBAG
Walter F. Rothe, Washington, D. C.
Application February 10, 1947, Serial No. 727,527
1 Claim. (Cl. 150—13)

A mail bag for use in deposit and collection mail boxes of the type having bag supporting

track means, comprising an openable and closable wide mouth of parallelogram configuration when in open position, a bottom portion with a plurality of drainage apertures therein, supporting rods secured to two opposite edges of the

mouth of the bag for opening and closing the same, said rods having reduced rounded ends, supporting rollers mounted for rotation around said reduced rounded ends and for co-action with said supporting track means and medial lock connectable handle loops formed from each rod.

2,468,898
TRANSMISSION BELT
Lester H. Shingle, Philadelphia, Pa.
Application October 31, 1945, Serial No. 625,771
2 Claims. (Cl. 74—232)



2. A transmission belt comprising a leather facing and a plurality of load-carrying substantially non-stretchable strands affixed to said facing, said strands being tensioned, and strands nearer the side edges of the facing having a greater tension than those nearer the center line of the belt.

2,468,899
ALKYLATION OF HYDROCARBONS
Carlisle M. Thacker, Highland Park, Ill., assignor to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application March 15, 1945, Serial No. 582,990
8 Claims. (Cl. 260—683.4)

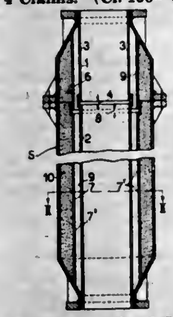
4. The method of reacting paraffins having at least 3 carbon atoms per molecule with olefinic hydrocarbons comprising, subjecting a mixture of said paraffins and olefinic compounds to temperatures of approximately 750°–1100° F. and pressures in excess of 500 pounds per square inch in the presence of a catalyst consisting of about 0.1 to 5 per cent of the charge by weight of bromine and 0.4 to 9.9 per cent of the charge by weight of a compound selected from the group consisting of carbon tetrachloride, carbon tetrabromide, chloroform, and bromoform.

2,468,900
ENGINE MOUNT
Leon F. Thiry, Montclair, N. J., assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application December 11, 1944, Serial No. 567,609
9 Claims. (Cl. 248—5)

1. An engine mount comprising a support, an annular group of supporting links converging toward a point spaced laterally from said support and pivotally connected at their outer ends to said support and at their inner ends to the engine, one pivotal connection of each link comprising a pivot shaft transverse to the link, a sleeve turnable upon said shaft and held against axial movement thereon, a tubular connecting member surrounding the sleeve and an elastic rubber bushing interposed between the sleeve and t bular member and yieldably connecting the sleeve and tubular member, an internal confining shoulder carried by the tubular member and having an internally beveled face engaging one end of said elastic bushing, an external confining shoulder carried by the sleeve and having an externally beveled face engaging the opposite end of the bushing, said shoulders exerting axial pressure on the bushing and increasing resistance to relative axial movements of the sleeve and tubular member in one direction, the confining shoulders in the pivotal connections of certain of the links throughout the annular group being reversely arranged with respect to the confining shoulders of other pivotal connections.

6. A mount for a radial engine comprising a plurality of annularly disposed cushioning elements arranged for absorbing oscillatory engine motion about the axis of said engine, each of said elements comprising a snubber means, wherein each of said cushioning elements comprises a member for attachment to said engine, another member for attachment to a support and a resilient element secured between said members for resiliently resisting motion therebetween in a direction transverse to the axis of said engine, said snubber means comprising elements secured to said members and arranged to compress said resilient element in one direction of relative motion between said members but not in the opposite direction.

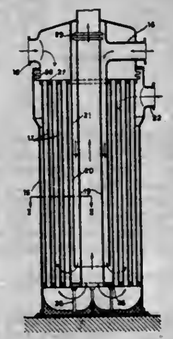
2,468,901
CUSHIONING AND VIBRATION DAMPING SUPPORT
Leon F. Thiry, Montclair, N. J., assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application October 20, 1945, Serial No. 623,499
8 Claims. (Cl. 248—10)



1. A support comprising two members having opposed seating portions and a cushioning unit

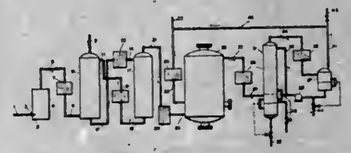
interposed between said seating portions and supporting one of said members, said unit comprising spaced elastic rubber cushioning and bumper blocks and means flexibly connecting the blocks, said bumper blocks being of less thickness than the cushioning blocks.

5. A support comprising an outer member having an opening and circumferentially spaced oppositely inclined seats projecting into said opening, an inner member having circumferentially spaced oppositely inclined seats opposed to the seats of the outer member, and an elastic rubber cushioning ring comprising cushioning blocks, bumper blocks and relatively thin webs connecting said blocks, said blocks being interposed between said seats and said bumper blocks being of less thickness than the cushioning blocks.



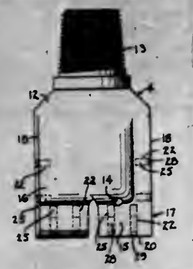
2,468,902
DOUBLE-WALLED BODY FOR HOT GASES OR VAPORS UNDER SUPERATMOSPHERIC PRESSURE
Eugen Villiger, Zurich, Switzerland, assignor to Aktiengesellschaft Fuer Technische Studien, Zurich, Switzerland, a corporation of Switzerland
Application August 21, 1945, Serial No. 611,876
In Switzerland October 20, 1944
4 Claims. (Cl. 138—64)

1. In a conduit for confined flow of high temperature gaseous pressure fluids, the combination of a pressure resisting external tube, formed of a material whose physical properties would be impaired at the temperature of the fluid to be conveyed; a pervious heat insulating lining within said tube; a flow directing internal tube spaced from said lining within the same; and means forming at least one rigid-walled hollow interspace affording a dead gas space of substantial volume between said internal tube and the internal surface of said lining, said interspace being in restricted communication with the interior of the internal tube and with the pervious body of said lining at points relatively so remote and so chosen with reference to the flow through the internal tube that said flow cannot induce sustained flow through the interspace.



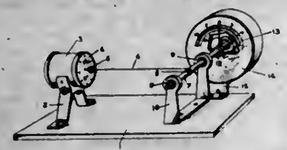
2,468,903
VERTICAL TUBULAR HEAT EXCHANGER
Eugen Villiger, Zurich, Switzerland, assignor to Aktiengesellschaft Fuer Technische Studien, Zurich, Switzerland, a corporation of Switzerland
Application August 28, 1946, Serial No. 693,451
In Switzerland September 22, 1945
1 Claim. (Cl. 257—222)

A vertical tubular heat exchanger, in which a medium is to be heated on the contraflow principle by flue gases which arrive at a considerable height above ground, comprising a vertical cylindrical shell; a vertical tube nest built into said shell and comprising an upper and lower plate into which the tubes of this nest are fixed; an upper header provided at the top end of said shell and having an inlet for flue gases, said header serving to distribute said gases over the upper extremity of the tubes of said nest; a lower header in communication with said tubes; a chimney tube built into said shell coaxially with said tube nest as the innermost body, in communication with said lower header and leading to a point



external to the heat exchanger; a second tube surrounding said chimney tube and leaving an annular space between the latter and itself and communicating at its lower end with the space which is bounded by said shell, said upper and lower plates of the tube nest and said chimney tube; a second inlet provided at the top of said shell for the incoming medium to be heated and connected to said second tube; and an outflow connection for heated air leading from the upper end of the space bounded by the shell, the upper and lower plates of said tube nest and the chimney.

2,468,904
PRODUCTION OF CARBON BISULFIDE
Cary R. Wagner, Utica, Ohio, assignor to Phillips Petroleum Company, a corporation of Delaware
Application August 10, 1945, Serial No. 610,180
10 Claims. (Cl. 23—206)



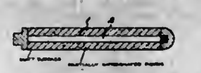
1. A method for the disposal of hydrogen sulfide and the simultaneous production of carbon bisulfide comprising reacting said hydrogen sulfide with a hydrocarbon in the fluid state and sulfur dioxide in the presence of a catalyst at a temperature below about 500° C. and recovering the carbon bisulfide.

2,468,905
MEANS FOR DETECTING WEAR ON BITS
John B. Warren, Jr., Houston, Tex.
Application June 11, 1943, Serial No. 490,431
4 Claims. (Cl. 255—61)

1. In combination with a rotary drill bit having a cutting blade, an opening extending into the blade, a charge of radioactive material together with a compressed fluid to effect discharge of such material, a wear piece positioning said charge a predetermined distance from the cutting edge of such blade whereby such material is released to indicate that such predetermined wear has occurred.

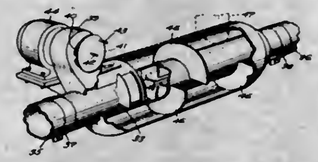
2,468,906
PRECISION MEASURING INSTRUMENT HAVING A THREAD FOR A MOTION TRANSMISSION LINK
William Whitehead, Forest Hills, N. Y., assignor to Celanese Corporation of America, a corporation of Delaware
Application January 4, 1945, Serial No. 571,236
4 Claims. (Cl. 73—386)

4. In an aneroid barometer comprising an evacuated chamber provided with a flexible diaphragm adapted to move on variation in external pressure and indicating means responsive to the motion of said diaphragm, a thread intermediate of said diaphragm and said indicating means adapted to transmit the diaphragm movement to said indicating means, said thread comprising a high tenacity, dimensionally stable regenerated cellulose thread of stretched and saponified continuous filaments having a basis of an organic ester of cellulose, and having an elongation no greater than 0.3% over a variation in relative humidity of 10 to 100% and an elongation of no greater than 0.5% over a temperature variation of from −50 to +80° C.



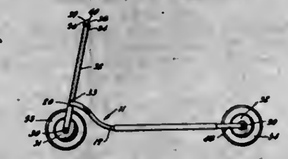
2,468,907
ELECTRIC FENCE POST
Robert M. Wilson and Goddie F. Phillipps, Battle Creek, Mich.
Application February 13, 1947, Serial No. 728,292
2 Claims. (Cl. 174—45)

2. In an electric fence post of the kind described, a fence post of symmetrical cross-section, a J-bolt threaded at the outer end only of its leg and having its bent end of reverse curve formation hooked around said post, a nut on said bolt acting when screwed up to clamp said bolt im-



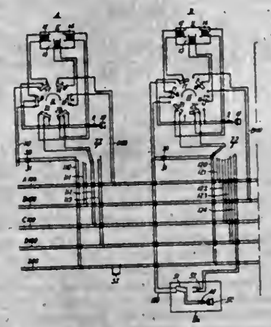
movably on said post, and an insulator carried by said bolt and centered on the side of the post, said insulator being interposed between the nut and the post.

2,468,908
LOOM TEMPLE
Thomas Clifford Woodman, London, England, assignor, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
Application September 16, 1943, Serial No. 502,573
In Great Britain September 28, 1942
1 Claim. (Cl. 139—294)



A resilient member having the consistency of a block of soft vulcanized rubber, said resilient member comprising a cylindrical body of matted fibres, said body of fibres being partially impregnated with a flexible film-forming material in an amount of from 10 to 25% of the weight of fibres and having a core of unimpregnated fibres, the average density of said core being from 0.2 to 0.4 gram per c. c., said member having a bore for the reception of a spindle and suitable for employment as the cloth-engaging part of a loom temple roller.

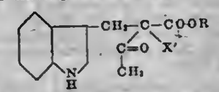
2,468,909
AUXILIARY AIR HEATER
Milburn E. Yeager, Needham, and Andrew J. Cnossen, Beheboth, Mass.; Evelyn M. Yeager executrix of said Milburn E. Yeager, deceased; said Evelyn M. Yeager assignor to said Cnossen
Application January 3, 1946, Serial No. 638,878
2 Claims. (Cl. 257—2)



1. A heat exchanger comprising a cylindrical casing, a central flue section having an axial opening at each end for connection in a flue, an air inlet opening in the casing wall adjacent one end, an air outlet opening in the casing wall adjacent the other end, spaced baffles of half torus shape mounted between said flue section and casing on opposite sides of the flue section, whereby air passing through the casing to be heated alternately contacts opposite side portions of the flue section, and a thermostatically controlled blower device having its air outlet communicating with the exchanger inlet opening.

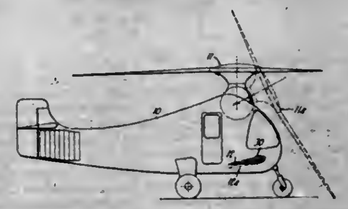
2,468,910
SCOOTER CONSTRUCTION
John Zainer and Alexander J. Tibores, Detroit, Mich.; said Zainer assignor to said Tibores
Application April 12, 1948, Serial No. 861,755
1 Claim. (Cl. 280—87.04)

A scooter comprising a frame having a pair of spaced side bars and a plurality of cross bars between said side bars, said side bars having opposed apertures adjacent their rear terminals, a rear axle supported in the apertures in said bars, a rear wheel rotatably mounted on said rear axle, said bars having upwardly and forwardly inclined extensions at their forward terminals, a bearing fixed to the forward extremities of said extensions, a spindle projecting through said bearing, a fork fixed to the lower end of said spindle having a head portion forming a seat for the bearing, a tubular head embracing said spindle, the lower end of said head being seated upon said bearing, an annular bearing flange integrally formed with the upper end of said head, a disk integrally formed with the upper end of said spindle and bearing upon said flange, a conical extension integrally formed with said disk and having a transverse bore, a handle bar engaging the bore and fixed thereto, a front axle and wheel carried by said fork, and a platform carried by said frame, said platform including depending side flanges fixed to said side bars.



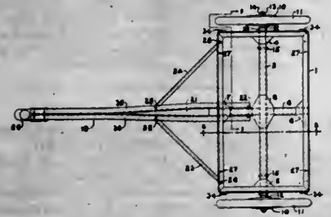
2,468,911
COMMUNICATION SYSTEM
William Ross Aiken, Berkeley, Calif.
Application October 19, 1945, Serial No. 623,233
15 Claims. (Cl. 179—1)

1. For a multistation intercommunication system, a station unit including a sound translating device, a multistage amplifier possessing an omnistage input, an interstage input and an output, a reception line for weak signals, a reception line for strong signals, a transmission line and means including a talk-listen switch whereby in one position of adjustment of said switch said sound translating device is connected to said omnistage amplifier input while said amplifier output is connected to said transmission line and whereby in another position of adjustment of said switch said reception line for weak signals is connected to said omnistage amplifier input and said reception line for strong signals is connected to said interstage amplifier input and said amplifier output is connected to said sound translating device.



2,468,912
ALKYL ESTERS OF α-ACYL, α-ACYLAMINO, β(3-INDOLE)-PROPIONIC ACID
Noel F. Albertson, East Greenbush, and Sydney Archer and Chester M. Suter, Albany, N. Y., assignors, by mesne assignments, to Winthrop-Stearns, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Original application March 2, 1944, Serial No. 524,776. Divided and this application August 17, 1948, Serial No. 44,806
1 Claim. (Cl. 260—319)

An ester having the formula



where X′ is acylamino and R is lower alkyl.

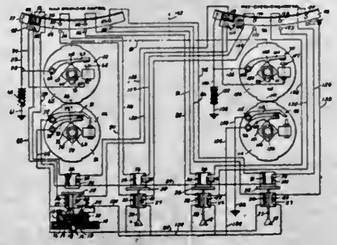
2,468,913
AIRPLANE AND HELICOPTER SUSTAINED AIRCRAFT
Harold T. Avery, Oakland, Calif.
Application November 22, 1943, Serial No. 511,304
7 Claims. (Cl. 244—7)

1. In an aircraft the combination of a rotor adapted to sustain the craft in vertical flight, said rotor comprising a power driven shaft and a plurality of blades attached thereto in a manner permitting alteration of blade pitch, wings adapted to sustain the craft in other than vertical flight, means for altering the relative proportions of craft load carried by the rotor and by the wings comprising mechanism for displacing the shaft of the rotor about an axis extending generally transversely of the craft, means uniformly operable in all displaced positions of the rotor shaft for selectively adjusting the pitch of said blades comprising mechanism including a member movable along the axis about which displacement of the rotor shaft takes place, for simultaneously varying the pitch of all of said blades and mechanism including a second member independently movable along said axis for cyclically varying the pitch of each of said blades.

2,468,914
FOLDABLE VEHICLE
John J. Banaszak and Walter J. Banaszak, Battle Creek, Mich.
Application July 10, 1947, Serial No. 760,063
7 Claims. (Cl. 280—40)

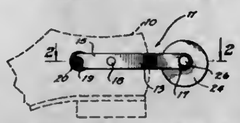
1. In a foldable vehicle of the two wheel type, the combination of a frame, a downturned main channel member and a downturned channel member crossing the main channel member on the under face of said frame, a pair of stub axle shafts, a wheel on the outer end of each stub axle shaft and means for pivotally mounting said stub shafts on either of said channels whereby said wheels may be folded to occupy positions beneath the frame.

2,468,915
PATCH POCKET AND METHOD OF MAKING SAME
George W. Bayless, Los Angeles, Calif., assignor to Tobias Kotzin, Los Angeles, Calif.
Application August 13, 1946, Serial No. 690,224
6 Claims. (Cl. 2—247)



1. In a pocket construction for a garment: a fabric member having a first fold substantially central of the top edge and extending downwardly from the top edge, said member also having a portion overlying said first fold at the top edge whereby a fullness results adjacent the center portion of the top edge; said member also having another fold across the member transverse to the first fold to provide a crest or high point at the fold where the fullness occurs.

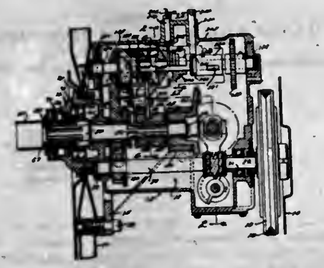
2,468,916
METHOD FOR PRODUCING ORGANIC TITANIUM COMPOUNDS
James Eliot Booge and Hugh Clifton Gulledge, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 23, 1946, Serial No. 649,756
7 Claims. (Cl. 260—429)



1. A process for producing a glycerin-titanium compound which comprises mixing precipitated, hydrated orthotitanic acid with glycerin to form a dilute suspension of said titanium compound in glycerin, and digesting the resulting suspension at an elevated temperature not in excess of 200° C. and until solubilization of said orthotitanic acid occurs.

2,468,917
CONTROL SYSTEM
James H. Booth, Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application September 28, 1944, Serial No. 556,195
5 Claims. (Cl. 175—335)

1. An actuating mechanism for a member comprising electromagnetic, relatively strong means for holding said member in one position, electromagnetic, relatively weak means for preliminarily exerting a force tending to move said member from said one position to another position but insufficient to actually move said member, a second electromagnetic, relatively strong means operable in conjunction with said weak means to move said member after said weak means has initiated a force tending to move said member, said first strong means being rendered inoperative upon initiation of operation of said second strong means, a second electromagnetic, relatively weak means for exerting a force tending to return said member to its first position, said second weak means being rendered operative and said first weak means being rendered inoperative a predetermined time after said second strong means is rendered operative, and means for rendering said first strong means operative and said second strong means inoperative a predetermined time after said second weak means has been rendered operative.

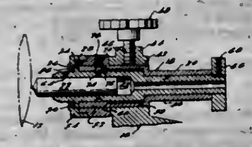


2,468,918
TOY RIDING SPUR
Carl E. Bowers, Los Angeles, Calif.
Application February 7, 1947, Serial No. 726,992
1 Claim. (Cl. 54—83)

A toy riding spur comprising a U-shaped frame structure made from a strip of resilient metal bent to dispose the width of the metal at right angles to the plane of the frame, a pair of rubber gripping cups secured in opposing relation to each other on the inner faces of the free ends of said frame member, said cups having a concaved exposed face, a pair of resilient rowel supporting members made of flat strip metal and secured on the outer faces of said U-shaped frame member, the rear ends of said supporting members extending rearwardly from the frame member and lying parallel to each other at opposite sides of the median line through the U-shaped member, a rivet extending through the parallel

portions of said supporting members, and a disc-shaped metal rowel having an opening substantially greater than that of the rivet and being mounted upon the rivet between the parallel portions of the supporting members.

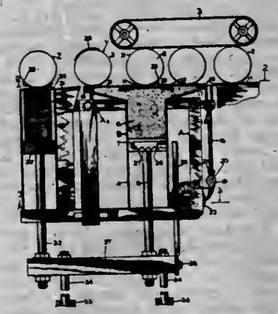
2,468,919
WASHING MACHINE DRIVE
Hyman D. Brotman, Detroit, Mich.
Application January 4, 1946, Serial No. 639,065
20 Claims. (Cl. 74—1)



1. In a clothes washing machine having a rotary clothes receiving cylinder, a power operated drive means for turning the cylinder, slow speed mechanism for transmitting from the drive means to the cylinder rotational motion at slow speed repeatedly first in one direction and then in another direction through a predetermined slow speed stage, high speed mechanism for transmitting from the drive means to the cylinder rotational motion at a relatively high speed in one direction only after the slow speed stage, and means timed to maintain said high speed mechanism out of operation until after the slow speed stage and at a time when the cylinder is rotating at slow speed in the same direction as it rotates at high speed.

2,468,920
HAMMERED METAL FINISH COMPOSITIONS
Arthur R. Brown, Old Bridge, and Robert T. Hucks, South River, N. J., and Charles W. Johnson, Flint, Mich., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 12, 1946, Serial No. 640,990
4 Claims. (Cl. 106—171)

1. A coating composition comprising about 25 parts of cellulose nitrate having a viscosity characteristic of not over 200 centipoises to about 1 part of dynamite type cellulose nitrate, and about 1.5–7.5% of finely divided metal powder based on the weight of the total solids in the composition.

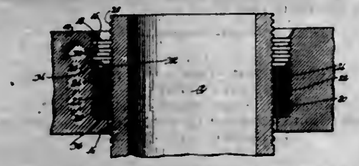


2,468,921
GRINDING WHEEL DRESSING MECHANISM
Stanford P. Bruce, Detroit, Mich., assignor to Wheel Truing Tool Company, Detroit, Mich., a corporation of Delaware
Application April 1, 1947, Serial No. 738,568
5 Claims. (Cl. 125—11)

1. In a device of the character described, a mounting, a tool holder rotatable in said mounting, said tool holder having forwardly and rearwardly directed annular shoulders, said mounting having annular radial seats disposed in confronting relation to said shoulders and provided behind said seats with an elongated bearing rotatably supporting said tool holder, and spring means confined between the forwardly directed

shoulder and its seat for urging the rearwardly directed shoulder solidly against its seat, whereby to prevent chatter of the parts during operation of the device.

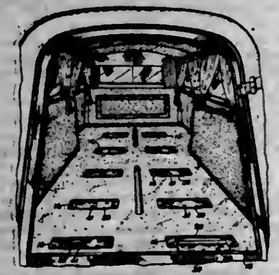
2,468,922
MACHINE FOR APPLYING LABELS TO CONTAINERS
Thomas L. Cook, San Francisco, Calif.
Application December 12, 1944, Serial No. 567,797
15 Claims. (Cl. 216—58)



10. In a device of the type described, a platform, means for rolling containers over the platform, means positioned in the path of the containers for applying a layer of adhesive and including an applicator, said adhesive applying means having a reservoir for the adhesive, the applicator receiving its adhesive from the reservoir, means for delivering a predetermined quantity of adhesive to the applicator which is sufficient for applying a layer of adhesive to the container, and means actuated by the containers rolling thereover for actuating the adhesive delivery means, means for successively positioning one label at a time in the path of the rolling containers at a distance from the applicator where the adhesive layer on the container will pick up the label and cause it to adhere to the container.

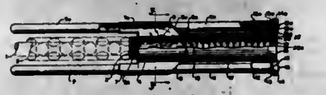
2,468,923
VINYL ACETATE POLYMERIZATION PROCESS
William R. Cornthwaite, Wilmington, Del., and Harold W. Bryant, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 16, 1946, Serial No. 641,659
7 Claims. (Cl. 260—87)

1. In a process for the aqueous emulsion polymerization of vinyl acetate, the step which consists in adding to an aqueous polymerizable emul-



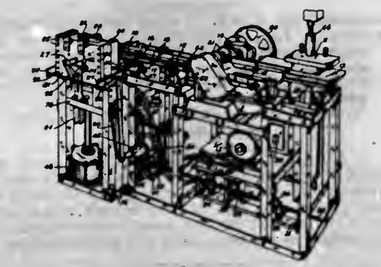
tion, in which vinyl acetate comprises at least 95% of the polymerizable monomer, between 0.01% and 10%, based on the weight of the vinyl acetate, of a substance consisting of an unsaturated acid having the formula $C_nH_{2n-1}COOH$ in which $n=9$ to 17, and polymerizing said monomer at a temperature between 50° C. and 100° C.

2,468,924
SEAL
Edward W. Courtier, Harvey, Ill., assignor to Swensen Evaporator Company, Harvey, Ill., a corporation of Illinois
Application December 29, 1945, Serial No. 637,860
1 Claim. (Cl. 285—30)



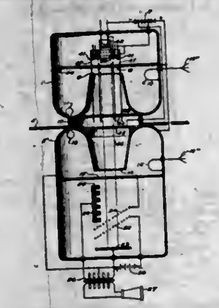
A pressure tight seal between a tube and a tube sheet having facing annular grooves and with an annulus of rubber-like material tightly fitting therebetween and into the grooves of the tube and tube sheet, characterized by a continuous metallic ring which bears against the low pressure side of the rubber-like annulus and has a continuous annular outer flange sloping outwardly toward the low pressure side of the tube sheet and projecting into the groove in the tube sheet and also having a continuous annular inner shelf portion integral with the outer flange and which lies in a plane perpendicular to the axis of but does not extend to the tube, said flange and shelf portion forming an angle of 150° therebetween before being deformed, said ring being made of a deformable metallic material so that when pressures in excess of twenty-five pounds per square inch are applied against the annulus from the high pressure side of the tube sheet the angle between said outer flange and said shelf portion approaches 180°.

2,468,925
FLOOR ROLLER CONSTRUCTION
Herman O. De Boer, Lombard, Ill.
Application October 3, 1944, Serial No. 557,786
12 Claims. (Cl. 296—16)



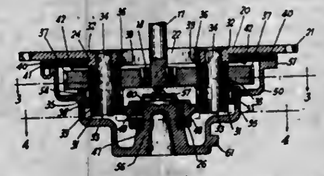
1. A floor roller construction for use in a vehicle of the class described comprising a body structure adapted to be mounted in the floor of the vehicle, a carrier frame pivoted within said body structure, a roller mounted in said carrier frame on an axis parallel to the pivotal axis of said frame, and a cover plate slidably mounted on said body structure and engageable with said carrier frame when in one position to hold said carrier frame and roller against movement thereof and adapted when in another position to permit the roller to project above the top of said body structure and to prevent the roller from being depressed.

2,468,926
FLASH HIDER FOR MACHINE GUNS
Emil Garrett, Quantico, Va.
Application December 26, 1944, Serial No. 569,672
2 Claims. (Cl. 89—14)



1. In a flash hider for a machine gun, in combination a primary expansion chamber, baffle plates centrally perforated to allow passage of a bullet and transversely disposed to and rigidly secured within said chamber to deflect propellant gases outwardly, and a pair of oppositely disposed bleeder tubes each substantially three times the length of said primary expansion chamber communicating with said chamber to lead said gases rearwardly and then forwardly.

2,468,927
ART OF MANUFACTURING SHOE COUNTERS
Henry Garyait, Milwaukee, Wis., assignor, by mesne assignments, to Van Horne Kaestner Leather Co., Milwaukee, Wis., a corporation of Wisconsin
Application August 3, 1946, Serial No. 688,217
10 Claims. (Cl. 12—66)

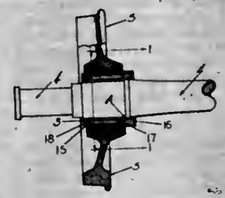


1. In combination, a reciprocable carriage having thereon a forming plug for bending flat shoe counter blanks into definite U-shape, a swingable die formed to receive the U-shaped blanks in succession directly from said initial bending plug and to position the same within a pressing zone, means for pressing the upper portions of the successive blanks into final shape within said zone, means for finally rolling a flange upon the lower portions of the successive blanks while confined within said zone, and means for swinging said die out of said zone to eject the counters therefrom.

2,468,928
ELECTRONIC OSCILLATOR-DETECTOR
William W. Hansen and Sigurd F. Varian, Garden City, and Russell H. Varian, Wantagh, N. Y., assignors to The Board of Trustees of the Leland Stanford Junior University, Stanford University, Calif., a corporate body of California
Original application July 8, 1938, Serial No. 218,064. Divided and this application October 24, 1942, Serial No. 463,290
46 Claims. (Cl. 315—6)

1. An electronic device comprising an apertured thermionically emitting structure, an accelerating electrode, a second thermionically emitting structure on the opposite side of said first structure from said electrode, and potential supply means coupled to said electrode and said structures for electrically biasing said first emitting structure with respect to said second emitting structure and for biasing said electrode with respect to said first structure to draw thermions from said second structure through said first structure toward said accelerating electrode and also from said first structure toward said electrode.

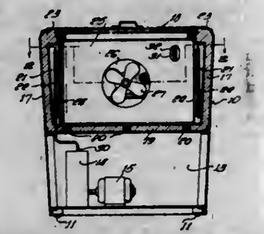
2,468,929
DRIVE UNIT FOR FLOOR TREATING MACHINES
William E. Holt and William R. Holt, Oakland, Calif.
Application February 28, 1946, Serial No. 650,874
10 Claims. (Cl. 74—421)



1. A surface treating machine comprising a drive unit including a motor having a vertical drive shaft, a pinion gear mounted on said drive shaft, a stationary gear supporting member having a circular bearing support member, a bearing secured in said bearing support member, an idler gear operatively connected to said pinion gear, a one-piece bowl-shaped casting forming a lubricant-containing housing surrounding said gears and having a ring gear thereon meshing with said idler gear, said housing having an integral closed bottom section and a central stem projecting upwardly therefrom into said bearing, and means for rotatably supporting said stem in said bearing.

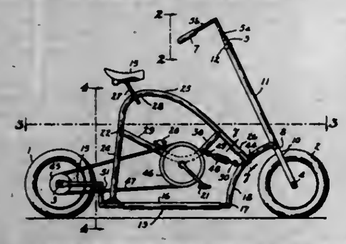
2,468,930
THIAMINE 2-ETHYLHEXYL SULFATE
Wolfgang Huber, Kings County, N. Y., and Werner R. Boehme, Prince Georges County, Md., assignors to Winthrop-Stearns Inc., New York, N. Y., a corporation of Delaware
No Drawing. Original application March 20, 1944, Serial No. 527,343. Divided and this application February 19, 1948, Serial No. 9,634
1 Claim. (Cl. 260—251)

The sparingly water-soluble salt thiamine 2-ethylhexyl sulfate, having the molecular formula $C_{28}H_{52}N_4S_2O_5$ and being characterized by melting at approximately 148–149°.



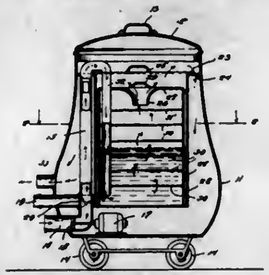
2,468,931
CAR WHEEL CONSTRUCTION FOR RESISTING THE TRANSMISSION OF VIBRATIONS
Edwin B. Hudson, Middletown, Ohio, assignor to Armco Steel Corporation, a corporation of Ohio
Application August 6, 1945, Serial No. 609,094
16 Claims. (Cl. 295—14)

11. In combination with a car wheel and an axle, an annular shocks absorbing metal unit interpositioned between the car wheel and the axle, said unit comprising a convoluted winding of metal strip in coil form, the said strip being under tension, the said coil having its convolutions integrally joined at inner and outer surfaces and at end edge surfaces, the metal strip in said structure being in a state of tension maintained by the aforesaid integral union, central portions of said convolutions being in the form of non-joined laminae, the dimension of said non-joined laminae axially of the structure being approximately the equivalent of the depth of the wheel portion engaging the structure.



13. A process of making a shock absorbing structure which comprises selecting a ferrous metal of a length to produce a convoluted coil of desired diameter, imposing copper selectively on a face of said strip to coat end portions thereof across their width but to coat intermediate portions thereof substantially only along side edges of said strip, attaching said strip to a support, winding said strip on said support under tension, attaching an outer convolution of said strip to maintain said tension, and then subjecting the wound structure to a brazing operation resulting in the integral union of convolutions of said strip to each other in the areas upon which copper has been imposed.

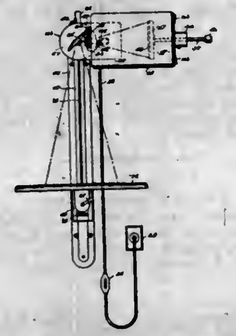
2,468,932
REFRIGERATING CABINET HAVING AN AIR-PUMP CIRCUIT
Frazier N. James, Dallas, Tex., assignor, by mesne assignments, of thirty-three and one-third per cent to The Master Corporation, a corporation of Arkansas, thirty-three and one-third per cent to Frazier N. James, and thirty-three and one-third per cent to Richard A. Gump
Application November 29, 1946, Serial No. 712,867
1 Claim. (Cl. 62—102)



In a dry cooling unit, the combination comprising a cabinet having upper and lower compartments and whose side walls are inwardly convergent at the bottom thereof, a refrigerating unit in the lower of said compartments, said upper compartment being insulated against external temperature influences and whose interior side and end walls are longitudinally recessed, a refrigerating coil lying wholly within each of said sidewall recesses and through which a refrigerant is circulated by said refrigerating unit, a removable commodity chamber within said upper compartment whose side and end walls completely cover and separate said recesses from said chamber, the latter having an opening in each end thereof communicating with the end recesses, means for establishing and maintaining suction through said openings to effect circulation of air through said chamber and said coil recesses across said coils and a hinged cover closing the top of said cabinet and chamber.

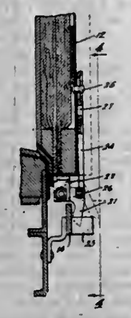
2,468,933
CONVERTIBLE VELOCIPEDE
Ellsworth J. Jones, Willoughby, Ohio
Application October 4, 1947, Serial No. 777,893
11 Claims. (Cl. 280—7.15)

1. A vehicle comprising rear and front wheels, a steering rod extending upwardly from the front wheel, a frame arranged between and supported by said wheels and providing a foot rest, a support attachable to and detachable from the frame, a seat mounted on said support, a pair of pedals rotatably secured to and arranged on opposite sides of said support, and means associated with said pedals and one of said wheels for driving said vehicle in response to the operation of said pedals, and said vehicle being movable as a scooter when said support is detached from the frame and one foot of an operator is forced at an angle into engagement with said foot rest.



2,468,934
PNEUMATIC CLEANING DEVICE
Teunis P. Kleyn, Muskegon, Mich.
Application January 8, 1946, Serial No. 639,833
2 Claims. (Cl. 261—123)

1. In a portable pneumatic cleaner, the combination, which comprises, a housing having inlet and outlet connections through a wall thereof, a closure for the upper end of the housing, a blower in said housing associated with said inlet connection, an air duct extending from said inlet connection and blower upward to a point adjacent the upper end of the housing, a cylindrical fluid container with a circumferential flange extending outward from the upper end thereof, means removably suspending said fluid container by the flange thereof in said housing with the walls thereof spaced from the walls of the housing, an inverted cylindrical element open at the lower end and substantially closed at the upper end freely positioned in said fluid container with the walls thereof spaced from the walls of the container, said inverted element having an outlet opening in the upper end thereof, a plurality of spaced horizontal baffle elements in said inverted container, said baffle elements comprising solid semi-circular sections and complementary semi-circular sections formed of screen elements, the solid sections and screen elements alternately positioned in said baffles to interrupt direct passage of air therethrough, and an inverted U-shaped air duct with one leg thereof adapted for sliding contact with the air duct extending upward from the inlet connection, and the other leg thereof extending downward through the baffles of said inverted element to a point in the lower part thereof below the level of a liquid in the liquid container and removable with said inverted element.



2,468,935
PHOTOGRAPHIC APPARATUS FOR REPRODUCTION BY DIRECT OR REFLECTED LIGHT BEAMS
Samuel W. Langdon, Rochester, N. Y., assignor to Marful Specialties, Incorporated, Rochester, N. Y., a corporation of New York
Application January 25, 1945, Serial No. 574,481
2 Claims. (Cl. 88—24)

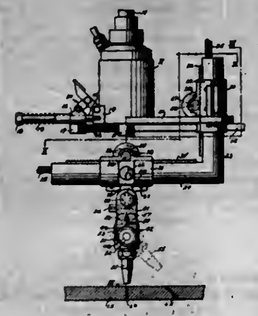
1. Photographic apparatus comprising, in combination, a light tight enclosure in which the subject is mounted, a light source in said enclosure, said enclosure having an opening, a lens system mounted adjacent said opening through which the image is projected, an easel upon which the sensitized paper is placed, a plane reflecting device having a pivot on the enclosure, pivot means for enabling the enclosure to be shifted from a position such that the lens axis is substantially parallel to the easel to a position such that the lens axis is substantially normal to the easel, said reflecting device being located

so that the pivot means lies substantially in the plane of the reflecting device when the lens axis is parallel to the easel whereby when the enclosure is shifted to a position such that the lens axis is normal to the plane of the easel the length of the optical path remains substantially the same as when the image is reflected through the reflecting device, said reflecting device swinging out of the optical path when the enclosure is shifted to the position in which the lens axis is normal to the easel.

2,468,936
LATCH MECHANISM FOR CAR DOORS
John S. Lundvall, Park Ridge, Ill., assignor to Union Asbestos & Rubber Co., Chicago, Ill., a corporation of Illinois
Original application March 17, 1943, Serial No. 479,422. Divided and this application September 11, 1944, Serial No. 553,530
1 Claim. (Cl. 292—237)

A latch device for a refrigerator car door movable longitudinally of the car and laterally toward and away from an opening in the car which comprises a latch member having a horizontal connecting arm pivotally secured at one end to the lower part of the door and extending outward therefrom and a vertical depending latching arm extending downwardly from the outer end of said horizontal connecting arm, said depending latching arm adapted to be received between a pair of spaced abutments adjacent to the lower horizontal edge of the door, and an operating member pivotally secured to the latch member adjacent the junction of the connecting arm and the latching arm and adapted when raised to move the latching arm away from the spaced abutments to permit longitudinal movement of the door, said operating member being slidably connected to the door and supported vertically by the latch member so that its weight urges the latch member toward the abutments.

2,468,937
HEAD APPAREL
Evelyn McCaffrey, Jamaica, N. Y.
Application January 23, 1946, Serial No. 642,861
5 Claims. (Cl. 2—174)



2. Headgear comprising a relatively wide resilient band member freely stretchable during placement and adapted to hug the head of a wearer at and adjacent the hair line; a supplemental crown member; and fastening means for securing said crown member to the upper outer margin of said band member in overlapping relationship therewith.

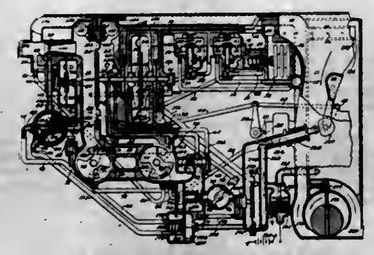
2,468,938
TORCH CONTROLLING FIXTURE FOR FLAME CUTTING MACHINES
John McLauchlan, Royal Oak, Mich., assignor to Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan
Application June 14, 1945, Serial No. 599,469
1 Claim. (Cl. 266—23)

A flame cutting attachment for the tracer head of a flame cutting machine, comprising a supporting shelf extending radially from the tracer head, a sleeve on said shelf with its axis parallel with the tracer axis, an L-bracket having a vertical leg and a lateral leg extending on the lower end thereof, said vertical leg extending upwardly through said sleeve, a rack bar on said vertical arm engaging said sleeve to hold said vertical arm against rotation, a gear journaled on said sleeve to mesh with said rack whereby said vertical arm may be longitudinally adjusted in said sleeve for vertical setting of said bracket relative to work to be cut, a holder sleeve receiving said horizontal bracket arm, a rack secured on said horizontal arm and engaging with said sleeve for holding said sleeve against rotation on said arm, a gear on said sleeve meshing with said

rack bar whereby said sleeve may be set in longitudinal direction on said lateral arm, a nozzle structure pivoted on said holder for angular setting thereof for the desired angle of application

of the nozzle structure flame to the work to be cut whereby straight edge cutting or bevel edge cutting may be performed on the work during travel of the tracer head.

2,468,939
MOUNTING FOR HYDRAULIC SHOCK ABSORBERS
Jean Mercier, New York, N. Y.
Application September 8, 1943, Serial No. 501,534
3 Claims. (Cl. 188—100)



1. A shock absorber which includes an inner and outer pair of telescoping members, a pair of universal joints, each one mounted in opposed relation at the opposite extremities of the telescoped members, the first said universal joint being in addition rigidly affixed to one member of the outer pair of telescoping members and the second said universal joint being in addition loosely fitted but positively held by a spring fastening on the other telescoping member of said outer pair, said loose fitting universal joint allowing a limited lateral deflection of the outer pair of telescoping members from the normal axis of the shock absorber while retaining the axial alignment of the inner pair of mating telescoping members.

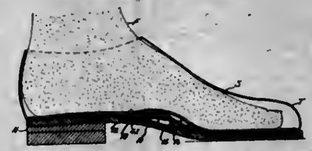
2,468,940
PRINTING CELLULOSE ESTER MATERIAL WITH ACID AND DIRECT DYES
Charles Franklin Miller, Delaware County, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 26, 1947, Serial No. 764,031
5 Claims. (Cl. 8—63)

1. In the process of printing cellulose esters with a color from the group consisting of acid and direct dyestuffs, the improvement which consists of applying the color by the aid of a printing paste containing as special assistants caprolactam and thiourea.

2,468,941
ENRICHENING DEVICE
A. William Orr, Jr., Detroit, Mich., assignor to George M. Holley and Earl Holley
Application April 4, 1945, Serial No. 586,606
3 Claims. (Cl. 261—18)

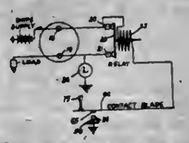
3. An engine fuel supply system comprising an air intake, an air restriction therein, a source of fuel under pressure, a fuel supply passage connected thereto, a restriction therein, automatic means responsive to the depression in said air restriction acting in opposition to the means responsive to the drop in pressure at said fuel restriction for varying the pressure downstream from said fuel restriction for maintaining a desired fuel/air ratio, a fuel enrichening device responsive to an increase in fuel flow above a predetermined value, a source of anti-detonating fluid under the same pressure as the source of fuel, a passage therefor, a manually controlled valve therein, means for introducing the anti-detonating fluid into the air entering the engine comprising a restriction in said anti-detonating fluid passage, a moving wall, a valve in the anti-detonating fuel passage connected to said moving wall, a chamber located on one side of said moving wall connected to the anti-detonating fuel passage downstream from said restriction, a second chamber located on the other side of said moving wall connected to the fuel under pressure existing downstream of said main fuel restriction whereby the drop in pressure at the restriction in said anti-detonating fuel passage is maintained equal to the drop in pressure at the restriction in the main fuel passage.

2,468,942
X-RAY TUBE COOLING APPARATUS
Wijbe Johannes Oosterkamp and Antonius Wilhelmus Vingerhoets, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application July 1, 1946, Serial No. 680,612
In the Netherlands March 15, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires March 15, 1963
6 Claims. (Cl. 250—143)



1. An X-ray tube, particularly adapted for prolonged loads, comprising a cathode, an anode comprising a target heated on the surface facing the cathode by electrons from the cathode, and to be cooled by removal of the heat through the rear surface thereof; and means for cooling the anode by rapid removal of the heat therefrom, said means including a body of liquid having a high thermal conductivity in intimate thermal contact with the rear surface of the anode, and a rotatable disc-shaped cooling body disposed so its peripheral edge is immersed in the liquid and closely adjacent the rear surface of the anode plate and separated therefrom by a film of the liquid.

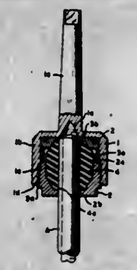
2,468,943
PRESSURE FLUID SERVOMOTOR
John B. Parsons, Toledo, Ohio
Application May 18, 1945, Serial No. 594,577
3 Claims. (Cl. 121—44)



3. A fluid pressure servo-motor comprising an elongate casing polygonal in cross section, a piston conforming substantially to the cross section of said casing and mounted therein for reciprocatory movements, a shaft adapted to be operatively connected at its outer end to the window panel and projecting inside of said casing, an elongate helical actuating element on said shaft for rotation therewith, said piston including a rubber disc providing outwardly a liquid-tight seal with the casing walls and inwardly a liquid-tight seal with said actuating element, and means for effecting piston movement longitudinally of the casing.

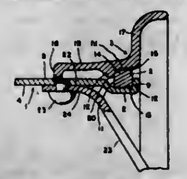
2,468,944
SHOE CONSTRUCTION
Oswald M. Pick, Chicago, and Bennett E. Goodman, Highland Park, Ill., assignors to The Florsheim Shoe Company, Chicago, Ill., a corporation of Illinois
Application September 8, 1947, Serial No. 772,648
9 Claims. (Cl. 36—76)

1. An arch support for a shoe comprising in combination; a lengthy plate to extend from the heel portion of the shoe to a point under the metatarsal arch of the wearer, said plate having a substantially rectangular notch at its forward end and an opening near the bottom of said notch, the tongues formed by said notch being bent down at their edges to form a support for the forward portion of said plate; a support member having a rearwardly extending tongue to fit in said notch and a downwardly extending tongue to be received in said opening, said support member further having depressed portions adjacent the root of said rearwardly extending tongue to fit under said first tongues to resist downward flexure of said plate relative to said member, said member further having a bent over forward edge portion; and a substantially semi-circular cushion member disposed between said bent over forward edge portions and extending over said support member to form a dome to support the metatarsal arch of the wearer.



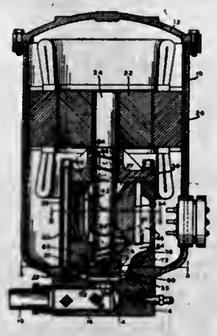
2,468,945
ALTITUDE RESPONSIVE CONTROL AND SIGNAL DEVICE
John D. Sasser, Springfield, Ohio, assignor to The Steel Products Engineering Company, Springfield, Ohio, a corporation of Ohio
Application July 21, 1944, Serial No. 546,027
7 Claims. (Cl. 177—311)

3. An altitude responsive control comprising a housing, a battery mounted within said housing, a closed and sealed bellows having a part thereof movable in response to changes in atmospheric pressure, a signal device carried on said housing, a switch contact carried on said movable bellows part, a relatively fixed contact supported from said housing and adapted to close a circuit with said movable contact from said battery to said



signal device in response to movement of said movable contact, and auxiliary control means for manually closing said circuit through said contacts independently of atmospheric pressure to test said battery and signal device.

2,468,946
CHUCK
Wilbur G. Sherman, San Diego, Calif., assignor to Accurate Tool and Engineering Company, San Diego, Calif., a copartnership
Application November 13, 1945, Serial No. 628,158
8 Claims. (Cl. 279—48)

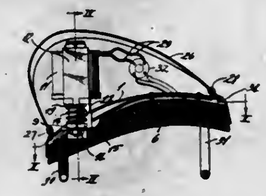


1. In a chuck of the class described the combination of a chuck casing having an extending shank portion and a hollow cup shaped portion, a retainer adjustably secured in connection with said cup shaped portion movable longitudinally of the axis thereof and a resilient collar in said cup shaped portion inwardly of said retainer having a central bore therethrough, a rotating cup positively abutted in said cup shaped portion of said chuck casing engaging the opposite end of said resilient collar from said retainer and providing a rotatable bearing for said collar in said chuck casing, said retainer and said rotating cup being in telescopic relation with each other at their open ends.

2,468,947
RIM
Charles W. Sinclair, Detroit, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application March 26, 1945, Serial No. 584,757
4 Claims. (Cl. 152—410)

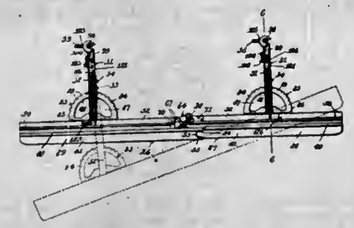
3. In a rim, an endless annular base member provided with an annular wall presenting a substantially radial surface, a detachable endless tire retaining ring member encircling said base member and having a generally radially inwardly extending part presenting a substantially radial shoulder and a transversely split clamping ring member between said base member and tire retaining ring member and abutting said substantially radial surface and shoulder and having radial wedging engagement with one of said first mentioned members, the minimum and maximum radial sectional dimensions of said clamping ring member before assembly of said base member and tire retaining ring member being greater than the minimum and maximum radial distances respectively between the portions of the surfaces of said base member and tire retaining ring member engaged by said clamping ring member in the operative position of said base, tire retaining ring and clamping ring members.

2,468,948
SEALED MOTOR-COMPRESSOR UNIT
Rolf M. Smith, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application May 28, 1945, Serial No. 596,287
11 Claims. (Cl. 230—139)



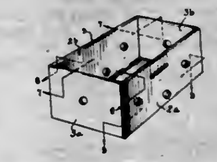
3. In a sealed motor-compressor unit; a cup-shaped casing formed of stamped sheet metal material; a motor including a motor stator supported by said casing; compressor mounting means secured to the bottom wall of said casing; a compressor assembly comprising a cylinder, top and bottom end plates for said cylinder having shaft bearing apertures therein, a shaft driven by said motor, an impeller between said end plates driven by said shaft, a longitudinally extending oil feed passage provided in said shaft, said compressor assembly and said compressor mounting means having formed therebetween a lubricant cavity, means for feeding lubricant to said cavity, spiral oil feed grooves provided on said shaft, one of said grooves having its inlet in said cavity and having its outlet communicating with the lower end of said oil feed passage, a second oil feed groove on said shaft having its inlet end communicating with the upper end of said oil feed passage and having its lower end discharging lubricant adjacent the upper end of said impeller, a third oil feed groove having its inlet in said lubricant cavity and having its outlet adjacent the lower end of said impeller.

2,468,949
MASSAGE VIBRATOR
Leland H. Snyder, Chicago, Ill., assignor, by mesne assignments, to Knapp-Monarch Company, St. Louis, Mo., a corporation of Delaware
Application September 22, 1945, Serial No. 618,026
7 Claims. (Cl. 128—41)



1. A massage vibrator comprising a base having downwardly extending side and end walls form-

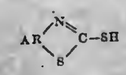
ing a downwardly opening shell, a soft resilient pad supported within said shell and protruding below said opening thereof, a casing mounted upon the upper side of said base, a spring member secured to said base and extending therebelow and positioned for flexing in response to vibrations imparted thereto and arranged in contact with



said pad to vibrate the latter, and a solenoid having a coil positioned within said casing above said base and having a plunger extending through said base secured to a flexible portion of said spring member for supporting the entire solenoid thereby, the whole being arranged whereby vibrations of the plunger are imparted to said spring member and thence to said pad.

2,468,950
SNOWPLOW
Edward L. Wiedman, Tonawanda, N. Y.
Application December 8, 1944, Serial No. 567,199
17 Claims. (Cl. 37—42)

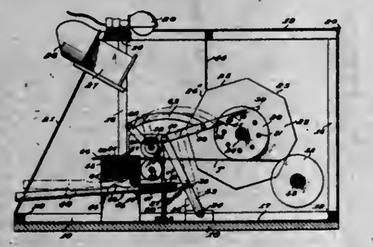
1. A snow plow, comprising a plow-share having two sections pivotally-connected together at their inner ends, and means extending rearwardly from said sections for attachment to an automobile, each of said plow-share sections being curved upwardly and forwardly at their upper ends and downwardly and forwardly at their lower ends, the inner ends of said plow-share sections being overlapped when trending in the same general direction, the inner edge of each of said sections being curved outwardly with the curvature at the lower ends of said edges on a greater radius than the curvatures at their upper ends so that when the sections are swung at an angle for directing snow to opposite sides of the path in which the plow is caused to travel the inner edges of said sections are in close juxtaposition throughout their lengths so as to prevent the passage of snow therebetween.



2,468,951
FOLDED BOX
Bert H. Barter, Coral Gables, Fla., assignor to Great Southern Box Company, Inc., New Orleans, La., a corporation of Louisiana
Application September 1, 1945, Serial No. 614,032
1 Claim. (Cl. 229—34)

Box assembled from a one piece folded blank, comprising a rectangular bottom, side and end panels upstanding therefrom, said side and end panels each comprising an outer panel portion integrally connected to said bottom, an inner panel portion parallel to said outer panel portion and substantially congruent therewith, and a connecting portion between said outer and inner side panel portions at the top of said side panel defined by spaced parallel score lines of such width as to space said panel portions a distance equal to the thickness of the stock of said blank, said connecting portion being formed with a slot therethrough at its middle, in width equal substantially to the width of said portion lateral flaps emanating from the inner end panel portions each in length being equal substantially to one-half the length of said side panels and in height being substantially equal to the height of the space between said inner and outer side panel portions, the flaps from corresponding ends of adjacent end panels lying between the inner and outer side panel portions forming an intermediate side panel portion, the upper adjacent corners of said flaps being notched to form a cavity in conjunction with said inner and outer side panel portions and beneath said slot, said outer panel portions below said connecting portions being each provided with a slot below said first mentioned slots, communicating with said cavity, the parts of each outer side panel portion between said slots defining a bar adapted to be embraced by a securing band, said inner side panel portion being imperforate in that region which forms the inner wall of said cavity.

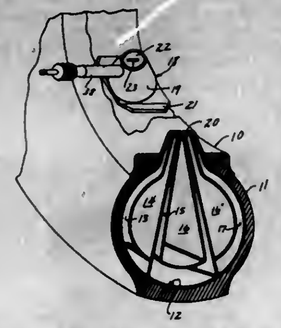
2,468,952
PROCESS FOR THE PREPARATION OF DI-THIAZYL DISULFIDE
Adolph J. Beber, Copley, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application December 12, 1944, Serial No. 567,895
6 Claims. (Cl. 260—306.5)



1. A process for preparing a dithiazyl disulphide which comprises preparing an alkaline solution of the sodium salt of the corresponding 2-mercapto-thiazole of the general formula:

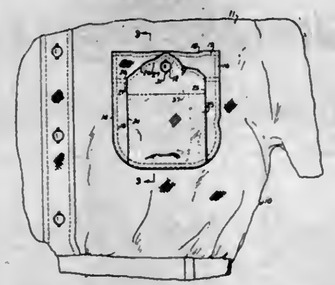
where AR is a bivalent aromatic radical having its valence bonds on adjacent ring carbon atoms, oxidizing said thiazole salt at a temperature of 30° C. to about 70° C. by bubbling chlorine into

the solution while maintaining its alkalinity at a pH between about 8 and about 11 until the oxidation is complete; whereby the disulphide is formed as a precipitate, and isolating the disulphide from the reaction medium.



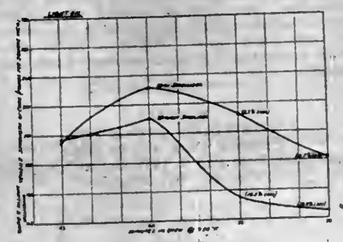
2,468,953
PLURAL TARGET EYE-TESTING DEVICE
Irving Bennett, Jacob Venger, and George C. Waddell, Beaver Falls, Pa.
Application June 3, 1947, Serial No. 752,196
8 Claims. (Cl. 88—20)

1. Eye testing apparatus comprising a casing, a drum rotatably supported in the casing, said drum supporting a plurality of eye-testing targets to be successively brought into the field of view of an observer, a second drum rotatably supported in the casing, said second drum supporting a record tape having a plurality of sections corresponding in number to the test targets and each section having indicia thereon identifying its associated test target, a table disposed in the casing and provided with a block in the top thereof and having a tape-receiving slot, tape-advancing rollers adapted to advance the tape from said second mentioned drum rotatably supported in the casing adjacent the block, a pair of spaced punches supported by the block for movement through said slot and adapted to punch-mark the tape in the section corresponding to the test target viewed, a pair of upright bars having their lower ends pivotally supported in the casing, a pair of hand operable members having their forward ends pivotally connected to the bars and their rear ends projecting beyond the casing, cam means on the handle members for operating the respective punches, the particular punch operated depending upon the state of vision of the eyes under test, and link and bar connections between said upright bars and said first drum and tape-advancing rollers operative for simultaneously rotating the drum and the rollers upon actuation of either of said handle members, whereby the actuation of a particular one of the punches gives an indication of the condition of the eyes under test.



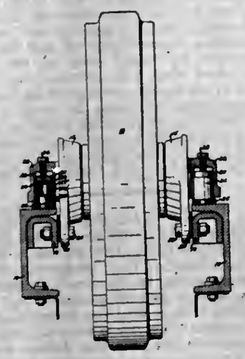
2,468,954
VALVE FOR MULTICELL INNER TUBES
Louis E. Bonham, Birmingham, Ala.
Application December 14, 1946, Serial No. 716,398
5 Claims. (Cl. 152—429)

1. In actuating mechanism for the valves of a multicell innertube, a housing, a rotatable disk in the housing, a plurality of protuberances on one side of the said disk adapted upon rotation of the disk to engage and open the inflation valves of said innertube, and an actuating rod associated



with said disk adapted upon inward movement to rotate the disk.

2,468,955
POCKET STRUCTURE
Holwin T. Brown, Troutman, N. C., assignor to Troutman Shirt Company, Troutman, N. C., a corporation of North Carolina
Application June 23, 1947, Serial No. 756,531
1 Claim. (Cl. 2—253)

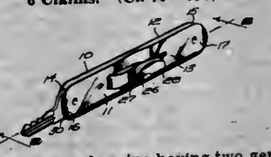


In combination with a shirt of the class described having a piece of material forming the front thereof, a second piece of material secured to the shirt front at its sides and bottom and cooperating with the shirt front to form a pocket open at its upper end, the upper central portion of said second piece of material having a button hole centrally disposed and a button secured to the shirt front and adapted to be passed through the button hole, a third piece of material of lesser width than the second piece of material and secured to the second piece of material at its bottom by a line of stitches and secured to the second piece of material at its sides by a line of stitches, the upper end of the third piece of material sloping upwardly into a point and having a fourth piece of material stitched to the inner upper surface thereof and conforming in shape to the upper end of the third piece of material to reinforce the upper portion of the third piece of material, the extreme upper ends of the third and fourth pieces of material having coinciding button holes therethrough coinciding with the button secured to the shirt front.

2,468,956
CORE OILS
Martin S. Burg, Chicago, Ill., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application October 17, 1946, Serial No. 703,851
8 Claims. (Cl. 22—188)

3. A method for forming sand cores which comprises mixing sand with a core oil comprising a predominant quantity of a drying oil and a minor amount, not more than about 10%, of a viscous, substantially saturated hydrocarbon polymer of alkene-1 hydrocarbon, said polymer having a flash point above about 450° F., molding the resultant mixture and baking the molded mixture.

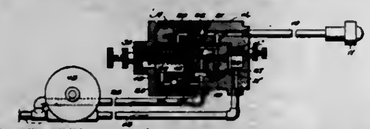
2,468,957
RESILIENT MOUNTING FOR TRACTOR TRACK IDLERS
George E. Burks, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application November 12, 1946, Serial No. 709,269
3 Claims. (Cl. 305—9)



1. A resilient mounting for a tractor track idler which includes idler bearings overlying a truck frame comprising slidable shoes resting on the truck frame, springs interposed between the shoes and the idler bearings, said bearings having downwardly opening recesses to receive said springs, and pliable blocks encasing the springs and substantially filling said recesses.

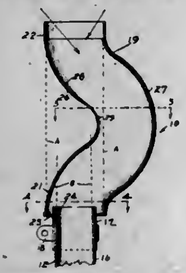
2,468,958
APPARATUS FOR TREATING CRUDE OIL VAPORS
Arthur V. B. Candler, Tulsa, Okla., assignor to Maloney-Crawford Tank & Manufacturing Co., Tulsa, Okla., a corporation of Delaware
Application July 19, 1945, Serial No. 605,949
3 Claims. (Cl. 183—94)

2. Apparatus for treating crude oil vapors, comprising an upstanding separating chamber, a relatively large upstanding central tube within the separating chamber and having spaced openings in its side, an imperforate conical downwardly tapering plate covering the upper end of the central tube and disposed above the openings in the central tube and extending radially beyond the central tube for a substantial distance and spaced from the side of the separating chamber, a second plate surrounding the central tube beneath the openings and forming a generally horizontal space with the upper imperforate plate and spaced from the bottom of the separating chamber for forming a sump chamber, the lower plate being spaced from the side of the separating chamber and having openings provided near and corresponding in number to the openings of the central tube, vanes disposed within the space between the upper and lower plates and including generally radial inner portions disposed adjacent to and upon corresponding sides of the openings of the central tube and the openings of the lower plate and outer circumferential portions which extend in the same direction and cover the openings of the central tube for imparting a generally horizontal circumferential movement to the vapors discharging through such openings, a plurality of outer tubes having substantially vertical discharge ends for discharging the vapors upwardly and substantially vertically through the openings in the lower plate and within the space and vanes at substantially right angles to the horizontal discharge of the vapors through the openings of the central tube, means to supply vapors to the central tube, means to supply vapors to the outer tubes, a tube connected with the lower end of the conical plate and passing through the central tube and discharging into the sump chamber, and means providing gas and oil outlets from the apparatus.



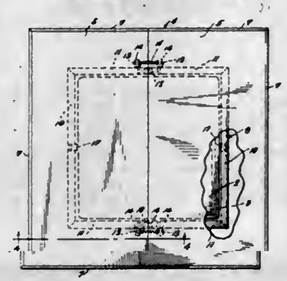
2,468,959
KEY CASE
Frank Cannon, Rhinecliff, N. Y.
Application April 19, 1947, Serial No. 742,707
6 Claims. (Cl. 70—456)

1. In a key case, a housing having two generally parallel sides, pivot means respectively inter-



mediate each end and the center of the housing, each adapted to swingingly receive the head of a key thereon, means normally gripping the end of a key between said sides, and means whereby pressing either end of the housing beyond the pivot means releases the key end gripping means.

2,468,960
VALVE DEVICE
John S. Case, Baltimore, Md.
Application May 10, 1944, Serial No. 534,899
8 Claims. (Cl. 137—53)

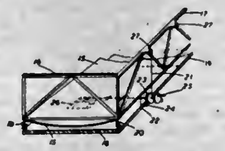


8. A valve device including a fluid pressure regulator comprising a casing having a chamber therein provided with an inlet and outlet and exhaust, a piston movable in said chamber having a pair of spaced by-pass passages therethrough, one of which establishes communication between the inlet and the exhaust when the piston is at or adjacent the rearward end of the chamber, and the other of which establishes communication with the opposite end of the chamber and the exhaust when the piston is at or adjacent the forward end of the chamber, a spring tending to bias said piston to the rearward end of the chamber with the force of the fluid pressure in the rearward end of the chamber exceeds the force of the spring biasing means and moves the piston forwardly to by-pass fluid to the outlet and on excess fluid pressure to by-pass fluid directly to the exhaust.

2,468,961
EXHAUST PIPE ATTACHMENT
William C. Curphy, Montour, Iowa
Application March 3, 1945, Serial No. 580,899
2 Claims. (Cl. 98—60)

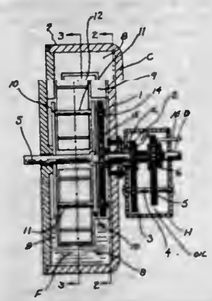
1. The combination with an upright exhaust pipe for an engine, of an attachment to keep moisture from entering the upper end of said exhaust pipe when the engine is not being operated, comprising a first upright tube member having its lower end adapted to be secured to said exhaust pipe upper end, a second upright tube member of larger diameter than said first tube having its bottom end in an overlapping relation with the top end of said first tube, means for connecting said bottom end and said top end in a concentrically spaced relation having drain openings therein, with said second tube being formed with an arcuate bend therein such that its opposite end openings are in co-axial alignment and a wall portion at said bend is extended across the projected area of said first tube, whereby moisture entering said second tube through the upper end thereof falls on the inner surface of said wall portion for gravity flow thereon to a position above a portion of said connecting means, said second tube member being of substantially the same cross sectional area over its complete length so as to provide for an unrestricted flow of exhaust gases therethrough.

2,468,962
AUXILIARY TABLE TOP
Edwin E. Czak, Elyria, Ohio
Application February 3, 1947, Serial No. 726,167
2 Claims. (Cl. 311—106)



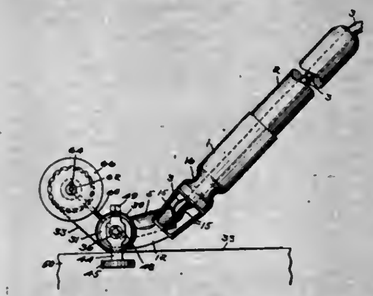
1. An auxiliary table top of appreciably greater dimensions than the top of a main table upon which the auxiliary table top is to be placed, said auxiliary table top comprising companion sections having adjoining side edge faces abutting when in an extended position, an open frame for fitting about the top of a main table carried by the auxiliary top and consisting of side bars extending longitudinally of the top sections and end bars extending transversely of the top sections, hinges carried by inner ends of the end bars and mounting the top sections for swinging movement from an extended position downwardly to a folded position close to each other, and springs extending in bridging relation to the top sections and secured to inner side edge portions thereof and serving to yieldably hold the said top sections in extended and folded positions.

2,468,963
METHOD OF AND MEANS FOR MAKING STEREOSCOPIC X-RAY PHOTOGRAPHS
Leslie Peter Clarence Jack Dudley, Twickenham, England, assignor to Stereoptics Limited, London, England, a British company
Application March 30, 1944, Serial No. 528,724
In Great Britain March 26, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires March 26, 1963
12 Claims. (Cl. 250—62)



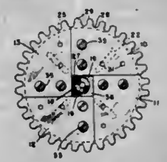
1. A method of making stereoscopic radiographs wherein a grid is interposed between the body to be subjected to X-radiation and a sensitized surface on which the radiograph is to be made, said grid having a plurality of substantially parallel laterally spaced strips of high opacity to X-radiation and a strip of high transparency in the space between each pair of adjacent

opaque strips, the said opaque strips being at least as wide as the transparent strips, comprising moving the grid with respect to the sensitized surface in a direction transversely with respect to the grid strips and through a distance equal to the width of one of the opaque strips



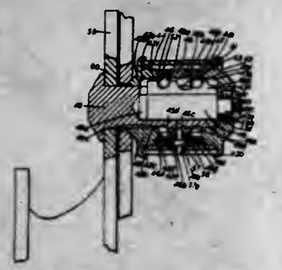
of the grid, the source of X-radiation being maintained in a stationary condition, and angularly moving the body as a whole about an axis parallel to the longitudinal axes of the grid strips so as to present different aspects of such body to radiation emanating from said source.

2,468,964
HYDRAULIC TRANSMISSION
Albert Dunn and Odus C. Elland, Mount Rainier, Md.
Application January 5, 1946, Serial No. 639,322
5 Claims. (Cl. 74—720)



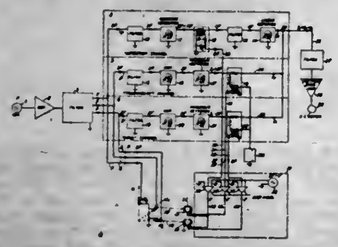
1. A hydraulic transmission, comprising a drive shaft, a driven shaft in alignment therewith, a circular fluid container mounted upon and concentrically with the two shafts, a bearing secured to the container and having the drive shaft passing therethrough and rotatable therein, a plurality of groups of rotatable vanes supported within the container upon and secured to the driven shaft to travel therewith in a circular path, a plurality of radially inwardly extending fixed blades carried by and within the container across the rotating groups of vanes outwardly of the path of travel thereof and extending radially inwardly at opposite sides of the groups, a sun gear secured to the drive shaft within the container, a plurality of planetary gears meshed with said sun gear and each connected with a group of vanes to impart rotation thereto from the sun gear, a gear secured to said bearing and rotatable freely about the drive shaft, and a speed change gear train connected between the drive shaft and the last mentioned gear for effecting the rotation of the container at a speed different from the shaft, said container being designed to hold a fluid.

2,468,965
ELECTRICALLY HEATED GILDING TOOL
Earl A. Ekstrom, Saugus, Mass., assignor to Fort Hill Engraving Company, Boston, Mass., a corporation of Massachusetts
Application August 27, 1947, Serial No. 770,849
1 Claim. (Cl. 41—7)



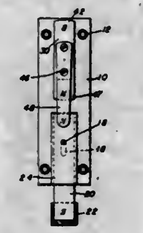
An electrically heated hand-gilding tool of the class described, having in combination a hub formed with a hollow extension integral therewith, a removable electrical heating unit adapted to be fitted in said extension, a handle attached to the hub, a heat-diffusing open spider between said hub and handle, a metal leaf-applying wheel rotatably mounted on a shaft extending thru said hub, an arm adjustably secured at one end of said shaft adapted to carry a strip-holding roll in alignment with said applying wheel, means to hold said roll in adjusted position constituting friction-engaging devices controlling the reels of strip material from said roll, an adjustable worktable edge-guiding device secured to said shaft, and current-conducting wires led thru the handle and said open spider to the removable heating element.

2,468,966
TOY GEAR
Earl Weston Farmer, Deephaven, Minn.
Application December 20, 1946, Serial No. 717,386
5 Claims. (Cl. 74—449)



1. A gear comprising a mounting, a plurality of gear elements attached to said mounting, said elements each having two angularly disposed edges, one longer than the other, and a circumferential edge connecting the angular edges and teeth formed on said circumferential edges, said elements being arranged on said mounting with the short edge of one element disposed adjacent the long edge of the adjacent element to leave an opening at the center of the assembly of elements and with the circumferential edges arranged in the form of a circle, said mounting having a hole therein at the center of said circle and at the locality of said opening.

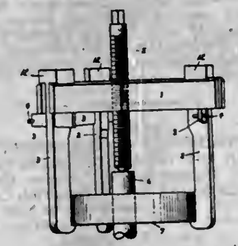
2,468,967
PERMUTATION LOCK
George Roweland Lovelace Semple Fisher, Pendock, Staunton, England
Application May 31, 1945, Serial No. 596,880
In Great Britain June 6, 1944
7 Claims. (Cl. 70—312)



1. A permutation lock of the type referred to comprising a hollow body; a number of rings bearing indicia and having their inner periphery notched, rotatable with respect to said body; a bolt peripherally grooved, one groove to each ring, and axially grooved, the axial groove running into each peripheral groove; a number of balls, one ball to each ring; spacing means between adjacent indicia bearing rings; a number of means intermediate the rings and the bolt adapted each to constrain a single ball the diameter of which substantially occupies the full space between the bottom of a groove in the bolt and the bottom of one of the notches in the rings; a dust cap mounted for rotation about said body and having an opening through which part of said rings may be exposed; and means displaceable by said dust cap to effect additional locking when said rings are exposed.

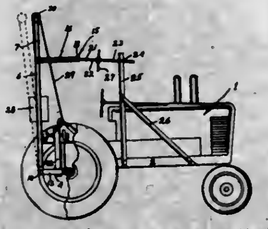
2,468,968
MAGNETIC FIELD STRENGTH INDICATOR
Edwin F. Felch, Jr., Chatham, N. J., and Thaddeus Sloneczewski, Glenwood Landing, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 20, 1943, Serial No. 483,755
12 Claims. (Cl. 175—183)

1. A magnetic field strength measuring system comprising in combination three magnetometers having their principal magnetic axes mutually perpendicular, each magnetometer comprising a length of magnetic material with electric windings thereon which are energized with an alternating current of fundamental frequency to generate a voltage of second harmonic frequency therein proportional to the product of the field strength and the direction cosine of the angle formed by the principal magnetic axis of each magnetometer with the direction of the magnetic field to be measured, an electromechanical orienting system therefor comprising two reversible electric motors one for each of two of said magnetometers, a mechanical linkage from each of said motors to its associated magnetometer whereby the motors may rotate their associated magnetometers around mutually perpendicular axes, an electric circuit coupling each of said two magnetometers to its associated electric motor whereby each motor is caused to rotate in response to the magnitude and phase of the second harmonic voltage generated in its associated magnetometer to maintain the principal axes of said two magnetometers substantially normal to the direction of the magnetic field, and the principal axis of the third magnetometer in substantial alignment with said field, and an electric squaring means for squaring the amplitudes of the second harmonic voltages generated in the three magnetometers, a separate rectifier for each of the squared voltages, a circuit combining into one current the direct current from each of said rectifiers, and an indicator responsive to the combined direct current.



2,468,969
MAGNETIC DOORSTOP
James O. Galey, Nashville, Tenn.
Application July 14, 1947, Serial No. 760,722
4 Claims. (Cl. 292—1)

1. A magnetic door stop comprising a base member removably secured to a door, a lower gravity actuated magnet slidably mounted on said base member, a resilient member engaging the lower end of said lower magnet, an upper magnet pivotally mounted on said base member, said upper magnet having first and second poles, said first pole being attracted to the upper end of said lower magnet to retain the latter in a raised position, means for rotating said upper magnet, said upper magnet having a pair of recesses in its inner face, a spring arm secured to the plate for holding the upper magnet in a selected rotated position with one pole thereof disposed adjacent the upper end of said lower magnet, and a detent carried by said spring arm received in a selected one of said recesses.



2,468,970
GEAR OR WHEEL PULLER
Clarence R. Gilbertson, Spokane, Wash.
Application July 11, 1945, Serial No. 604,443
1 Claim. (Cl. 29—259)

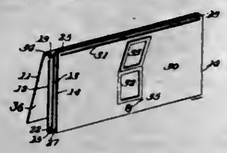
A puller element embodying a bifurcated support having a pair of spaced elongated supporting arms providing a centrally disposed slot, a gripping jaw having a head at one end overlying said arms, an elongated shank integral with and extending from said head through said slot and terminating in a hook, and a single elongated opening entirely within the lateral boundary of said shank underlying said arms, and a wedging element movable in said slot transversely of the plane of movement of said jaw and operable to clamp said arms between said wedge and head to afford a rapid engagement and disengagement

between said head and arms for adjustably fixing said jaw along any point on said arms, said wedging element having ends of unequal length with the edge adjacent to the arms normal thereto and the opposite edge disposed along an inclined plane for cooperation with the end of said elongated opening remote from said arms, to effect a camming action on said jaw to clamp said arms at any radial point therealong by a single blow of said wedging element on its larger end, which may be quickly released by a single blow on said smaller end of said wedging element.

2,468,971
POST DRIVER
Lester M. Gregg, Newport, Wash.
Application June 2, 1947, Serial No. 751,723
6 Claims. (Cl. 61—74)

1. A post driver comprising a vertical frame having side bars constituting tracks, brackets pivoted to and extending forwardly from lower ends of the side bars and adapted to be secured to a tractor and mount the frame rearwardly thereof, a weight between the side bars formed in opposite sides with grooves receiving the side bars and mounting the weight for sliding movement vertically in the frame, standards adapted to be mounted vertically at opposite sides of a tractor, a nut pivotally mounted between upper ends of said standards, a yoke having side arms pivotally mounted adjacent upper ends of the side bars of said frame and extending forwardly therefrom, a nut pivotally mounted between front ends of the side bars of the yoke, a shaft having threaded front and rear end portions about which the nuts fit and a hand wheel intermediate its length for turning the shaft and tilting the frame forwardly and rearwardly to angularly adjusted positions, a shelf mounted above said brackets, bearing brackets carried by said shelf, a shaft rotatably supported by the bearing brackets, a drum carried by said shaft, a cable wound upon said drum, a pulley at the top of said frame, a guide pulley, a support for the guide pulley adapted to be mounted upon the tractor and support the guide pulley forwardly of the frame, said cable having a portion extending from the drum and engaged with the pulleys and extending downwardly from the pulley at the top of the frame and attached to the weight, a large pulley carried by said shaft, a belt engaged about the large pulley for transmitting rotary motion to the shaft and the drum from a power takeoff pulley of a tractor, a lever pivoted to the bracket at the other side of the frame from said shelf, arms pivoted to the bracket under the shelf, an idler pulley rotatably mounted between upper ends of the arms, and rods connecting said lever with said arms for swinging the arms upwardly and holding the idler pulley in engagement with the belt to tighten the belt and cause rotation of the drum to wind the cable thereof and draw the weight upwardly when the lever is swung in one direction.

2,468,972
MOISTURE MEASURING AND CALIBRATING APPARATUS FOR TREE CULTURE
Robert J. Hagerty, San Gabriel, Calif.
Application December 3, 1945, Serial No. 632,554
1 Claim. (Cl. 47—1.3)



In a system of the class described adapted for measuring resistance and moisture content at the roots of trees in a field, comprising, a plurality of insulated conductors disposed in pairs at each tree trunk and positioned diametrically opposite to each other, an exposed end in each of said conductors positioned at an approximate lowermost root depth of said trees, a lead wire connector at the upper end of each of said conductors for connecting electric current carrying lead wires thereto, a panel means in said system, a plurality of switches on said panel means for designating the position of each tree on said field and for connecting said lead wires leading from each pair of conductors disposed in close proximity to the respective tree, and ohm meter in the circuit of said system for determining resistance between the respective conductors of any tree when the respective switch is closed and for measuring moisture content at the lowermost root depth of each tree.

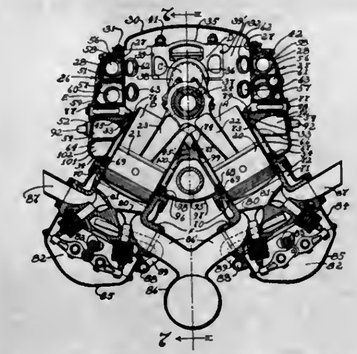
2,468,973
MULTISECTIONED FOLDER
Ida Hambrock, Toledo, Ohio
Application July 4, 1945, Serial No. 603,231
2 Claims. (Cl. 150—28)

1. A handbag consisting of a blank divided into quarter sections by a principal central fold line

that folds the blank in half and two secondary fold lines that mate to fold the half into quarter sections, the quarter sections forming two intermediate and two end sections, pockets on one face in each of the two intermediate sections of the open blank with their mouths confronting each other adjacent the principal central fold and closed thereby, a third pocket on said one face

of the blank in one of the end sections with its mouth open to the adjacent secondary fold and closed by the other secondary fold, a fastener on said one face of the blank detachably holding the intermediate sections together when the blank is folded in half, and a second fastener on said one face of the blank to detachably hold the end sections together.

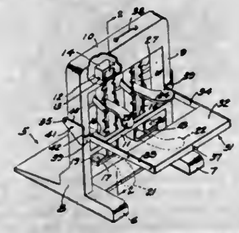
2,468,974
ROTARY SWITCH
Charles E. Hammer, Hagerstown, Md., assignor to Fairchild Engine and Airplane Corporation, a corporation of Maryland
Application August 9, 1946, Serial No. 689,390
8 Claims. (Cl. 200—6)



7. A casing construction for housing a switch mechanism including an apertured mounting plate, fastening means engaging certain apertures in said mounting plate arranged for the attachment of the front face of said mounting plate to a supporting structure, attachment means engaging certain apertures in said mounting plate arranged for the attachment of a switch mechanism to the rear face of said mounting plate, said mounting plate having a peripherally recessed portion on the back face thereof, a casing member engaging said peripherally recessed portion in said mounting plate at a near end of said casing member, an end closure disc engaging the far end of said closure member, said far end disc apertured to receive certain of said fastening means, retaining means engaging said fastening means for clampingly retaining said casing member between said end disc and said mounting plate, and electrical conductor means passing through an apertured portion of said mounting plate for connection to the switch mechanism arranged to permit ready removal of said end disc and said casing member for access to the enclosed switch mechanism without the necessity of removing said mounting plate from the supporting structure, the switch mechanism from the plate or disconnecting the electrical connections to the switch mechanism.

8. In a multiple switch construction, a switch supporting assembly, a plurality of switch units supported from said assembly arranged for individual actuation, a plurality of switch actuating levers pivotally supported upon said assembly and operatively associated with a respective switch unit, an actuating shaft journalled within said supporting assembly, a plurality of cam elements mounted upon said actuating shaft having cam faces engageable with said levers for their actuation, said cam elements having end faces arranged to engage the corresponding end faces of the adjacent cam elements arranged to positively maintain the relatively adjusted positions to which each cam element is adjusted without the necessity of removal of the adjacent cam elements, means for locking said cam elements in engagement with each other and in a fixed relationship to said actuating shaft and means for rotating an individual cam element into an adjusted position upon said actuating shaft upon release of said locking means and axial separation of the adjoining cam elements without the necessity of disturbing the adjustment of said adjacent cam elements.

2,468,975
PLASTIC COMPOSITION COMPRISING VINYL RESIN AND DICARBONATE ESTER
Fred J. Held, Jr., and Robert P. Blaine, Cleveland, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application August 24, 1946, Serial No. 692,932
11 Claims. (Cl. 260—29.1)

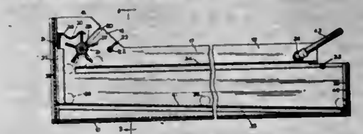


1. A plastic composition comprising a polymer of a monomeric material comprising predominantly vinyl chloride and from 5 to 100% by weight based on said polymer of a 4,4'-bis-alkylcarbonato (diphenyl alkane) in which both phenyl groups are directly attached to the same carbon atom in the alkane.

2,468,976
INVERTED V-TYPE ENGINE
Alexander G. Herreshoff, Grosse Pointe, and Wade Lamb, Detroit, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application June 11, 1942, Serial No. 446,560
28 Claims. (Cl. 123—55)

6. A crankcase structure for an engine of the type having V-arranged banks of cylinders, comprising, transversely spaced side structures extending longitudinally of the engine, each of said side structures comprising inner and outer walls relatively spaced from each other, means comprising a plurality of pairs of transversely aligned V-arranged cylinder-receiving tubes connecting portions of the inner walls of said side structures, each of said tubes being arranged to receive a cylinder in jacketed relationship therewith for providing a coolant receiving space surrounding the cylinder, each of said side structures having a plurality of floors integrally connecting the inner and outer walls thereof and so constructed and arranged as to provide a coolant-receiving header between a pair of said floors communicating with the jackets of the cylinders of one of said banks.

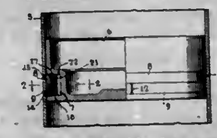
2,468,977
PEDAL EXTENSION AND FOOTREST ATTACHMENT FOR PIANOS
George L. Hobbs, Glendale, Calif.
Application December 29, 1947, Serial No. 794,241
10 Claims. (Cl. 84—230)



1. In a pedal extension and foot rest attachment for pianos, a base, a pair of uprights upstanding from said base in a parallel spaced apart relation, a cross piece uniting said uprights at their upper ends, said cross piece being U-shaped in cross section with the mouth of the U directed downwardly, an intermediate cross piece bridging the space between said uprights in a downwardly spaced relation to said U-shaped cross piece, each of said cross pieces having vertically alined openings in them, extensions adapted to rest upon piano pedals vertically slidable in said openings, and vertically adjustable means mounted upon said extensions for remotely operating said piano pedals.

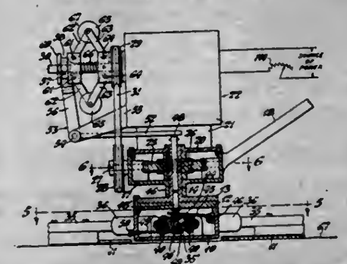
2,468,978
COMPOSITION OF MATTER COMPRISING CARBON BLACK AND ALKYL THIAZYL DISULFIDES
Arthur L. Hollis, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application August 3, 1948, Serial No. 42,352
3 Claims. (Cl. 106—307)

1. A dry, free-flowing composition consisting of pelletized carbon black on which has been absorbed from 10 to 50% by weight, based on the total composition, of an oily liquid mixture of bis-alkylthiazyl disulfides containing about 75 to 85% bis-4,5-dimethylthiazyl disulfide, about 15 to 20% bis-4-ethylthiazyl disulfide, and less than 10% of 4,5-dimethylthiazyl-4-ethylthiazyl disulfide.



2,468,979
WHEEL TYPE TARGET MEMBER
Charles W. Howard, Long Beach, Calif.
Application October 24, 1947, Serial No. 781,913
3 Claims. (Cl. 273—127)

1. A movably mounted game target device designed to be actuated by a projected game piece, comprising a shaft, a wheel rotatable thereon and including a plurality of flat, radial blades having wide front and back faces disposed in planes paralleling the turning axis of the shaft, and yieldable holding means for the wheel adapted to release the wheel for turning when a blade is struck by a game piece comprising a long

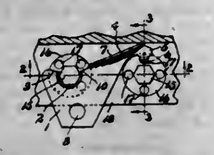


spring arm secured at one end to extend over the top of the wheel and formed to provide a downwardly bowed portion merging into an upwardly bowed arched terminal portion in which latter portion is releasably engaged the top edge of an upwardly projecting blade.

2,468,980
PISTON SEALING STRUCTURE
Matthew W. Huber, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Application August 2, 1944, Serial No. 547,797
3 Claims. (Cl. 309—44)

1. A piston ring assembly for mounting in the ring groove of a piston and comprising in combination at least two metallic snap rings assembled side by side to fill the width of the groove, the inner surfaces of rings which contact the sides of the groove being beveled toward the contacted side; a continuous rubber-like sealing ring underlying said rings, extending from side to side of the groove and having marginal portions which fit said bevels; and expanding means adapted to react outward upon substantially the entire inner surface of said sealing ring.

2,468,981
TROWELING MACHINE
James O. Huffman, Los Angeles, Calif.
Application October 29, 1946, Serial No. 706,479
4 Claims. (Cl. 94—45)

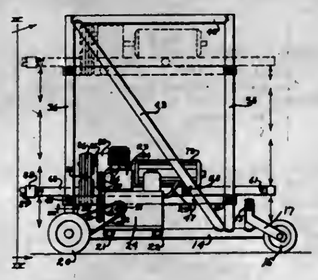


1. In combination with a troweling machine of the type including a plurality of trowel members revolvable about a common axis and in which

each of the trowel members is tiltable on an axis extending radially of the axis of revolution: a variable speed power means connected to said trowel members for revolving said trowel members; a tilting mechanism connected to each of said trowel members for tilting the same; a governor connected to said driving means and having a member movable in response to variations in speed of said driving means; and means interconnecting the movable member of said governor with said tilting mechanism for tilting said trowel members to various angles in response to variations in speed of said driving means.

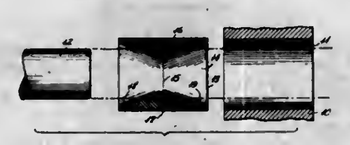
2,468,982
PREPARATION OF BIS-PHENOLS
Jacob Eden Jansen, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application October 19, 1946, Serial No. 704,525
10 Claims. (Cl. 260—619)

10. In a process wherein a phenol is condensed with a carbonyl compound containing oxygen in carbonyl linkage and being otherwise composed exclusively of carbon and hydrogen atoms, in an acidic medium, the step which comprises carrying out the condensation in the presence of a catalyst selected from the class consisting of mercapto-substituted aliphatic carboxylic acids and the mercaptols and mercaptals of such mercapto-acids.



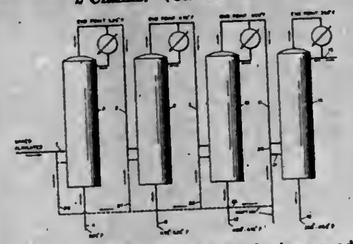
2,468,983
TAPPET HOLDING WRENCH
Charles E. Johnson, North Muskegon, Mich., assignor to Johnson Products, Inc., Muskegon Heights, Mich., a corporation of Michigan
Application January 21, 1946, Serial No. 642,538
2 Claims. (Cl. 81—3.02)

1. A tappet holding wrench comprising a flat metal body widened at one end and having at a side edge thereof a recess to receive the shank of the screw of a tappet, said body at its opposite end having a downturned tongue adapted to be inserted into a hole at the upper end of the next adjacent tappet, said recess having an entrance opening through the edge of said body through which said shank may pass, the width of said entrance opening being less than the diameter of said recess whereby to partially embrace said shank of said screw.



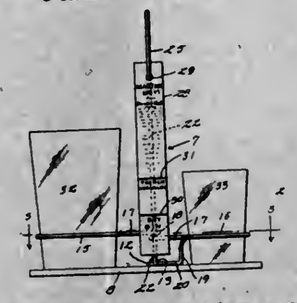
2,468,984
MACHINE FOR SANDBLAST CLEANING OF TUBULAR GOODS
Kenneth L. Krieg and William T. Johnson, Valley Center, Kans.; said Johnson assignor to said Krieg
Application May 31, 1947, Serial No. 751,512
4 Claims. (Cl. 51—8)

1. In a machine for carrying out the described process of sand blast cleaning, a power driven carriage supported on wheels, said carriage having an elevatable frame thereon, and means for holding said frame in adjusted elevated positions, a stationary cylinder and sand blast tube carried on said frame, and a revolvable sand blast tube carried on said cylinder, and power means carried on said frame, and means connected between said power means and the rotatable sand blast tube for rotating the rotatable tube, a ro-



tatable sand blast extension tube and means for connecting the extension tube to the first said rotatable tube, a sand blast nozzle, said sand blast nozzle being mounted on the outer end of the sand blast extension tube in sand blast receiving relationship thereto, and means for connecting a sand blast hose from a sand blast machine to the rear end of the said atationary sand blast tube.

2,468,985
RESILIENT CONNECTION AND METHOD OF MAKING SAME
Alvin S. Krotz, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application November 26, 1943, Serial No. 511,775
10 Claims. (Cl. 287—85).



1. A resilient connection comprising a housing having a bore, an inner element extending through said bore, and a body of resilient rubber-like material surrounding said element within said bore under radial compression and unadhered to said housing and said element, said body comprising an annular bushing located in said bore, said bushing having a circumferentially substantially uniform wall thickness at its ends less than the radial space between said element and said housing and an annular zone between its ends of circumferentially substantially uniform thickness greater than such radial space and having a bore flared from said annular zone toward said ends, said bushing being adapted to fill the space between said housing and said element for the length of the bushing by distortion of the resilient material in the assembled position of the parts without substantial lengthening of the bushing.

2,468,986
PREPARATION OF ODORLESS FRACTIONS OF HIGHLY BRANCHED PARAFFINS
Harold B. Legatski and Chester C. Crawford, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
Application September 17, 1945, Serial No. 616,930
2 Claims. (Cl. 196—73)

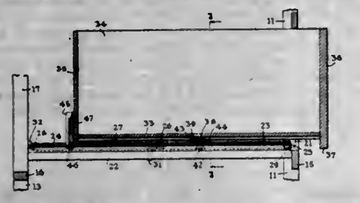
1. An improved process for producing an odorless branched-chain paraffin hydrocarbon fraction boiling from 350 to 400° F. from an olefin-free paraffinic charge stock containing same and also higher-boiling and lower-boiling branched-chain paraffin hydrocarbons, said stock being free from sulfur and nitrogen contaminants and containing oxygen, which comprises subjecting such a charge stock to fractional distillation and removing therefrom an odorous distillate comprising said desired 350 to 400° F. fraction and lower-boiling paraffin hydrocarbons, introducing a stream of said odorous distillate into an intermediate point of a fractional distillation column, withdrawing from said column as a distillate an odorous stream of paraffin hydrocarbons boiling below 350° F., and removing as a kettle product from said column an odorless fraction boiling from 350 to 400° F. as a product of the process.

2,468,987
DEVICE FOR COMPOUNDING MIXED DRINKS
Guy P. Le Moyne, Fort Myers, Fla.
Application August 26, 1946, Serial No. 693,125
3 Claims. (Cl. 73—428)

1. In a drink mixing device, a base, a rack secured thereto and disposed thereabove, said rack being provided with a container holder disposed above and parallel to the base and adapted to support a transparent mixing container in a fixed position on the base, a card holding portion forming a part of the rack adapted to support a recipe card in predetermined spaced relationship to the mixing container and externally thereof, said card bearing indicia on one side thereof including graduations and instructions for the compounding of a particular drink, and said card holding portion being disposed at a predetermined level above the container holder and base and substantially parallel to the plane of each to support the card with the graduations thereof at a predetermined level relatively to the mixing container bottom, said card holding portion including spaced rod portions disposed substantially parallel to the base and each of which is adapted to support a plurality of the indicia bearing cards, and an arcuate portion connecting said rod portions and by which the cards are movable from one rod portion to the other.

2,468,988
FISH LURE
Garrett B. Lobdell, North Tonawanda, N. Y.
Application December 18, 1946, Serial No. 716,905
4 Claims. (Cl. 43—42)

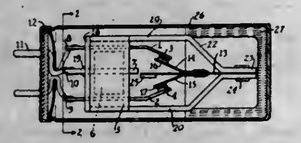
1. A fish lure, comprising a spoon-shaped body having an aperture near one extremity and having a hook-shaped finger offset from a central part of said body to be positioned so as to extend across the longitudinal axis of the body, a hook having a back fitted under said hook-shaped finger and having a reversely bent barbed end, the opposite end of said hook extending through said aperture, and means for securing a fish line to said opposite end of said hook on the convex side of said body.



2,468,989
UNCOOKED WRINKLE COMPOSITION CONTAINING SYNTHETIC RUBBER AND CONJUGATED DOUBLE BONDED OIL
Enrique L. Luaces, Dayton, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application June 9, 1945, Serial No. 598,649
8 Claims. (Cl. 260—23.7)

1. As a new composition of matter, a wrinkle drying coating composition comprising a conjugated double-bonded oil and synthetic rubber solution in proportions of 100 parts by weight of said oil to from 10 to 50 parts by weight of dry rubber in an organic solvent, said rubber being a butadiene derivative, selected from the group consisting of butadiene styrene copolymer, butadiene acrylonitrile copolymer and polychloroprene.

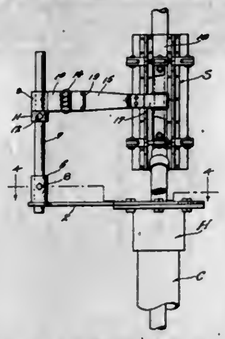
2,468,990
GUIDING AND SUPPORTING STRUCTURE FOR DRAWERS
Carl Brynolf Lundstrom, Little Falls, N. Y.
Application July 13, 1945, Serial No. 604,789
5 Claims. (Cl. 45—77)



1. The combination of a supporting structure having an opening for a drawer; a drawer movable through said opening; a cradle underlying said drawer and comprising a rectangular frame having a longitudinal channel member mounted substantially at the longitudinal center line thereof, said channel member opening toward one face of the cradle; channeled guiding means serving to sustain said cradle in said structure;

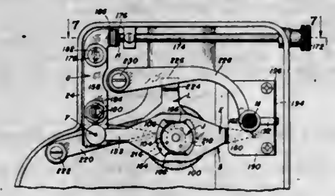
channeled guiding means alone serving to sustain said drawer on said cradle; and two guiding means mounted respectively on the drawer and on the supporting structure, one of which straddles said longitudinal channel member, and the

other of which enters the channel thereof, each said means being effective over at least half the length of the drawer or the cradle, as the case may be, to maintain lateral position and alinement thereof.



2,468,991
VIBRATING DEVICE
José A. Mas, Indianapolis, Ind., assignor, by mesne assignments, to Cornell-Dubilier Electric Corporation, South Plainfield, N. J., a corporation of Delaware
Application October 6, 1945, Serial No. 620,717
3 Claims. (Cl. 200—87)

1. In a vibrating device the combination with a frame, a vibrating reed secured at one end of said frame and having its free end projecting toward the opposite end of said frame, a molded insulating base having imbedded therein and supported thereby in predetermined spaced relation and extending on opposite sides of said reed a pair of resilient relatively stationary supporting arms carrying contacts adapted to face one another and a driving magnet having a pole piece unobstructed by the molded insulating base, said base being supported at the end of the frame opposite the support for the reed having a portion thereof embracing a portion of the frame and so supported in the frame as to present the pole piece of the magnet toward the free end of said reed.

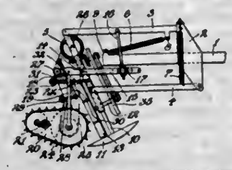


2,468,992
HANGER BRACKET DEVICE
William J. Miller, Inglewood, Calif.
Application February 17, 1944, Serial No. 522,776
2 Claims. (Cl. 166—16)

1. In well drilling equipment, means for supporting and centering an oil saver relative to a well casing, comprising an elongated arm, means rigidly securing an end of the same to the upper end of a well casing to extend laterally therefrom, an upstanding post carried by said arm and extending above the upper end of the well casing, a collar slidable on the post, means rigidly locking the collar in selected position upon the post, an arm freely swingably mounted on the post and resting upon the collar, another arm hingedly connected with the second-named arm, and means rigidly securing said last-named arm to an oil saver, the hingedly connected arms being

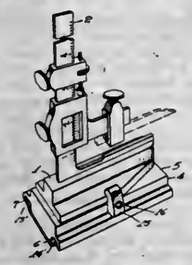
arranged to coact with the first arm to center the oil saver with and above the well casing to which the first arm is secured.

2,468,993
MOTION-PICTURE PROJECTOR
Lewis H. Moomaw, Great Neck, N. Y., assignor to De Jur-Amsco Corporation, Long Island City, N. Y., a corporation of New York
Application October 17, 1946, Serial No. 703,808
15 Claims. (Cl. 88—18.4)



11. A motion picture projector comprising a housing a claw arm for controlling the motion of the film, actuating mechanism for said claw arm, a pivot to which said actuating mechanism is oscillatably connected, and adjustable framing mechanism comprising a member mounted in said housing so as to be slidable within limits and carrying said pivot and a cam continuously manually rotatable in a given directon and active upon said member to slidably position the same in said housing and thus position said pivot, thereby adjusting the framing of the film in said projector.

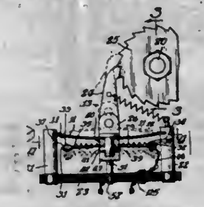
2,468,994
AUTOMATICALLY CORRECTED MEANS FOR REMOVING BEETROOT TOPS
Jean Moreau, Noyelles-sur-Escaut, France
Application March 12, 1947, Serial No. 734,002
In France March 24, 1939
Section 1, Public Law 690, August 8, 1946
Patent expires March 24, 1959
5 Claims. (Cl. 55—107)



1. For attachment to a beetroot digging machine, means for removing beetroot tops, comprising: an articulated parallelogram having members oscillatably mounted on the digging machine, supporting frame members carried by

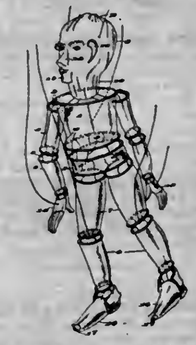
the articulated parallelogram, a circular, concave top-removing knife rotatably supported by the said supporting frame members, means for transmitting rotary motion from the digging machine to the top-removing knife, a pair of forwardly and rearwardly extending levers fulcrumed on the supporting frame members, struts pivoted to and extending downwards from the leading ends of the said levers, a self-laying track carried by

the said struts in advance of the top-removing knife, means for driving the self-laying track at a speed slightly greater than the speed of travel of the digging machine so that it tends to draw the tops of the beetroots backwards towards the top-removing knife, pivoted links connecting the rearwardly extending arms of the levers to the articulated parallelogram, and means for varying the effective length of the rearwardly extending arms of these levers.



2,468,995
HEIGHT GAUGE
Harry Morrison, Pittsburgh, Pa.
Application August 31, 1944, Serial No. 552,099
3 Claims. (Cl. 248—346)

1. An auxiliary base for a measuring instrument having a foot-like base with a bottom plane surface, said auxiliary base comprising a generally rectangular block having a plane top surface for receiving the bottom surface of the foot-like base, means for clamping the bases together; roller bearing races along the longer outer bottom edges of the auxiliary base, and a row of roller type bearings of uniform size in each of the races, whereby movement of the instrument on a plane reference surface is facilitated.



2,468,996
COMPENSATED THERMAL MOTOR
Ray G. Olson, Glenview, Ill., assignor to The Magnavox Company, Fort Wayne, Ind., a corporation of Delaware
Application April 14, 1947, Serial No. 741,240
7 Claims. (Cl. 172—126)

1. A thermally actuated timing device comprising a dish-shaped snap-impulse bimetallic operating member supported at its outer edges and adapted when heated to snap from a normal position to an inverted position and when cooled to return to normal position; a shiftable fitting at the center of said operating member and a compensating member mounted on said fitting; the compensating member comprising an auxiliary bimetallic member strip adapted to flex in one plane only and secured to the fitting at the midpoint of the strip whereby the opposite ends

of the strip are unsupported and adapted to flex gradually and progressively away from the operating member in response to heat; an electrical heating unit extending between the unsupported ends of the bimetallic strip, and a pair of breaker contacts responsive to the movement of the operating member to break the circuit through the electrical heating unit.

2,468,997
MANUFACTURE OF MARIONETTES
Mildred M. Osgood, Terre Haute, Ind.
Application April 21, 1944, Serial No. 532,171
12 Claims. (Cl. 46—126)

1. A marionette constructed at least partly from thin sheet material rolled into the general shape of hollow cylinders with the cylinders spread apart and loosely connected at their peripheries by means of threads to produce joints, said sheet material being resilient and sufficiently stiff to hold its shape when rolled.

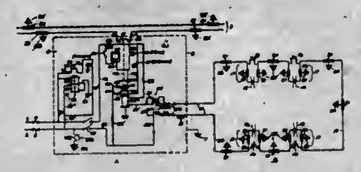
2,468,998
RETAINER-STRIPPER UNIT FOR PUNCH PRESSES
John H. Parsons, Pontiac, Mich.
Application January 21, 1947, Serial No. 723,422
8 Claims. (Cl. 164—110)

1. A retainer-stripper unit for use in presses comprising a retainer block having a plurality of spaced bores therethrough, a punch mounted in one of said bores and extending beyond a face of

said block, stripper means for said punch spring-pressed against said face of the block, said stripper means including a plate adapted to engage said face of the block, resilient work-engaging

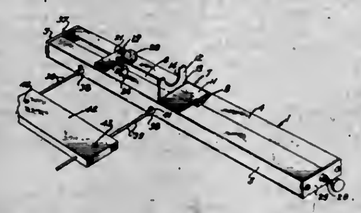
means carried by said plate in position to engage the work in advance of the punch when the press is operated, and spring-controlled securing means for said plate mounted in another of said bores and passing through an aperture in said plate.

2,468,999
LIFTING DEVICE
Eugene H. Pettler, Beaver, Pa.
Application [illegible]ober 13, 1946, Serial No. 704,103
[illegible]laims. (Cl. 214—85.2)



1. In a lifting hoist, a pair of gripping forks comprising a plurality of substantially rectangular frames in parallel alignment, the front uprights of which are channel members for receiving a tie rod that is slidable vertically therein, a tie rod disposed in said channels, the ends of which are adapted to interact with said channel to prevent displacement of the tie bar therein, means for raising and lowering said tie bar, and means mounted on the lower horizontal frames of said forks for exerting a gripping pressure on a load disposed between said forks whereby the load is supported on said forks from pressure exerted on the side of the load.

2,469,000
VALVE-ACTUATING LEVER
Herman E. Pleasant, Holland, Mich., assignor to Crampton Manufacturing Company, Holland, Mich., a corporation of Michigan
Application July 22, 1946, Serial No. 685,369
1 Claim. (Cl. 4—67)

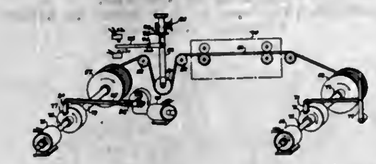


A device of the class described, a one-piece tubular fixture adapted to be fixedly secured in an opening in the wall of a toilet tank, said fixture including a flanged head and a radial face, the radial face having an integral eccentrically disposed laterally projecting arcuate lug thereon, a handle having an enlarged interiorly chambered head of substantially hemispherical shape and including a free peripheral edge which extends about and over the flanged head of the fixture, a centrally projecting spindle integral with the head and extending beyond the peripheral edge thereof, spaced radially disposed webs of substantially the depth of the chambered head therein integral with and extending from the spindle radially outwardly to and integral with spaced portions of the inner wall of the head thus forming an arcuate space in the head and within which space the lug is disposed for limiting the rotative movement of the handle relative to the fixture, a valve actuating lever secured to the extended end of the spindle, and a flush valve attached adjacent the other end of the lever.

2,469,001
ABNORMAL TEMPERATURE AND GROUND DETECTOR ALARM SYSTEM
Edward J. Poitras, Hailiston, Mass.
Application April 19, 1946, Serial No. 663,282
7 Claims. (Cl. 177—311)

1. In an alarm system for warning of an abnormal operating condition, an electrical switch responsive to the abnormal condition, an electric conductor in circuit with the switch, the conductor having grounded conductive metallic shield means substantially encompassing and normally insulated from it, an alarm device actuated in response to operation of the switch due to an abnormal operating condition, and ground detector means responsive to a shorted condition as between the conductor and the shield means.

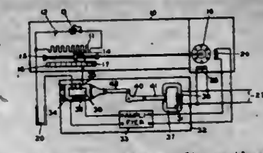
2,469,002
GOLF PRACTICE DEVICE
Sante Quattrin, San Francisco, Calif.
Application May 26, 1947, Serial No. 750,392
11 Claims. (Cl. 273—35)



1. In a golf practice device of the character described, a frame, an abutment slide slidably held on the frame, a member on the abutment slide extended above the frame to be engaged by the head of a golf club, a ball supporting slide guided on the frame normally spaced from said abutment member toward the end of the frame away from the direction of approach of the golf club to said abutment member and being aligned with said member to hold a ball in the path of said club when the said slide is shifted to said member, and resiliently yieldable means to return said abutment slide to an initial position when released by the head of the golf club.

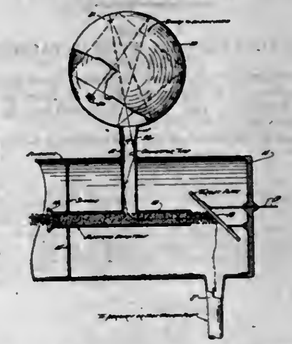
2,469,003
LUBRICATING OIL COMPOSITIONS
Albert G. Bocchini, Springdale, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application July 14, 1947, Serial No. 760,943
3 Claims. (Cl. 252—32)

1. A lubricating oil composition essentially comprising a major proportion of a hydrocarbon oil of lubricating viscosity and between about 0.1 and about 5.0 per cent by weight of the composition of an oil-soluble polyvalent metal salt of naphthenoxy-stearic acid.



2,469,004
BACK TENSION DRIVE
John D. Roschrough, Detroit, Mich., assignor to American Blower Corporation, Detroit, Mich., a corporation of Michigan
Application October 23, 1944, Serial No. 559,966
9 Claims. (Cl. 242—75)

9. An apparatus for producing back tension upon material being processed that includes in combination, an apparatus for supporting a supply of material and from which it will be unwound, means for withdrawing the material from the said source and thereby unwinding the same, means for producing back tension upon the material while being unwound comprising a variable speed fluid coupling having one rotatable element thereof connected to the said apparatus and the second rotatable element thereof connected to a source of power and rotated in the opposite direction to the first element, and means actuated in response to a change in tension upon the material for changing the speed relationship between the said elements of the said fluid coupling.

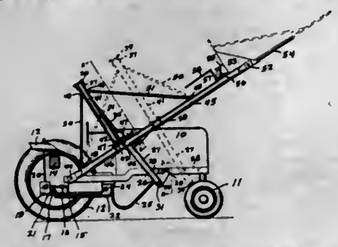


2,469,005
MAGNETOSTRICTIVE CONDITION-RESPONSIVE APPARATUS
John L. Russell, Waterbury, Conn., assignor to The Bristol Company, Waterbury, Conn., a corporation of Connecticut
Application February 8, 1947, Serial No. 727,327
7 Claims. (Cl. 318—28)

2. In combination, means responsive to variations in a variable condition for causing a flow of direct current of intensity corresponding to said variations, a magnetostrictive core structure having a winding for receiving said current, means responsive to alternating current for subjecting said core structure to cyclically varying physical stresses to produce corresponding variations in the permeability thereof and thus in the magnetic flux produced in said structure by said direct current, said core structure also having a secondary winding in the path of said flux for

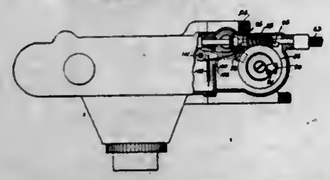
the inducing therein of an alternating electromotive force of frequency corresponding to that of said flux and of magnitude and phase dependent upon the respective intensity and direction of said direct current.

2,469,006
APPARATUS FOR HIGH EVACUATION
Eugene F. Shelby, Long Beach, Calif.
Application September 27, 1944, Serial No. 556,043
3 Claims. (Cl. 230—69)



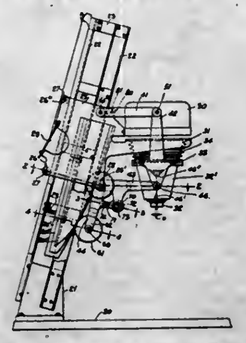
1. An apparatus for evacuating a chamber or envelope comprising a housing, an electron gun at one end of the housing, a target plate at the other end of the housing, a partition in the housing between the electron gun and the target plate, a conductor tube leading into the housing to which the chamber or envelope to be evacuated may be connected, and a beam tube extending through the partition and connected to the conductor tube adapted to have an electron beam from the electron gun pass therethrough to the target.

2,469,007
MANURE LOADER
Owen C. Siebring, George, Iowa
Application March 24, 1947, Serial No. 736,881
2 Claims. (Cl. 214—140)



1. A manure loader comprising a pair of arms, hydraulic means for raising said arms including a pair of hydraulic cylinders pivotally attached to a tractor to which said arms are pivoted, said cylinders having pistons therein, rods attached to said pistons, an inverted U-shaped brace member attached to said arms, bearing members attached to said rods receiving the horizontal portion of said U-shaped bracing member, means for positioning said bracing member at selected positions along said arms for providing greater lift-

ing effort to said arms, rods attached to said bracing member and said arms, said rods adapted to provide further bracing means, said rods being of such lengths so that upon adjustable positioning of said bracing member, said rods can be

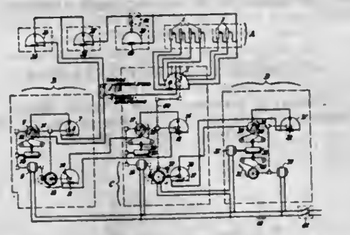


interchangeably attached, brackets attached to the tractor, said cylinders being pivotally attached to said brackets, means for adjustably positioning said brackets at selected positions to the tractor.

2,469,008
ROLL FILM CAMERA WITH DETACHABLE MAGAZINE
Alfred Simmon, Jackson Heights, and Louis L. Weisglass, New York, N. Y., assignors to Simmon Brothers, Inc., Long Island City, N. Y., a corporation of New York
Application September 28, 1944, Serial No. 556,104
1 Claim. (Cl. 95—31)

In a camera with a detachable roll film magazine, film advancing means, exposure counting means, automatic means to stop the movement of said film advancing means after a predetermined length of film has been advanced, all supported within the magazine, and means to modify said automatic means supported within the camera itself; said film advancing means comprising a first relatively fast rotating shaft; said exposure counting means comprising a train of gears driven by said first shaft, and a second relatively slowly rotating shaft driven by said train of gears; said automatic means to stop the movement of said film advancing means comprising a first and a second projection carried by said first shaft, a first movable obstruction and means actuated by said second shaft to move said first obstruction into the path of the first of said projections after a predetermined length of film has been advanced in a first direction in which the film is wound into the magazine, and to move said obstruction into the path of the second projection, after a predetermined length of film has been advanced in a second direction in which the film is wound out of the magazine; said means to modify said automatic means comprising a second movable obstruction supported within the camera and adapted to be placed automatically between the second of said projections and said first obstruction, when said magazine is attached to said camera; whereby, when said magazine is detached from said camera, the movement of said film advancing means is stopped by the coaction of the first projection with said first obstruction after a predetermined length of film has been advanced in the first direction, the magazine then being fully loaded, and by the coaction of the second projection with said first obstruction after the same length of film has been advanced in the second direction, the magazine then being entirely empty and whereby, when said magazine is attached to said camera, the movement of said film advancing means is again stopped by said coaction of the first projection and said first obstruction after the same predetermined length of film has been advanced in the first direction, the magazine then again being fully loaded, and by the coaction of the second projection and said second obstruction after another, but shorter, predetermined length of film has been advanced in the second direction, the magazine then still containing a short length of film, said first obstruction pushing said second obstruction into the path of said second projection.

2,469,009
MANUAL FINE FOCUSING MEANS FOR AUTOFOCUS ENLARGERS
Alfred Simmon, Jackson Heights, N. Y., assignor to Simmon Brothers Inc., Long Island City, N. Y., a corporation of New York
Application February 26, 1946, Serial No. 650,293
2 Claims. (Cl. 88—24)

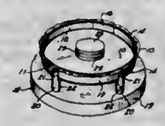


1. In an autofocus enlarger comprising a base, a substantially vertical support, and a projector adapted to slide on said support; at least one stationary cam in said support; a focusing mechanism attached to said projector and comprising a movable lens carrier and a two-armed pivoted lever, a first arm of said lever operatively connected to said lens carrier, and a second arm forming an angle with said first arm, a cam-following roller carried by said second arm in contact with said cam, and a manual fine focusing device including means to adjust the angle between said two arms.

2,469,010
RAZOR
Richard H. Smith, Newton, Mass.
Application April 7, 1944, Serial No. 529,906
3 Claims. (Cl. 30—50)

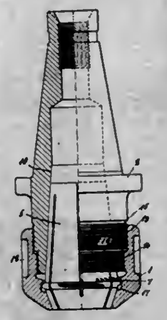
1. A razor comprising a pair of blades each of generally parallelogrammic shape and having a single-beveled cutting edge, and a holder for supporting said blades at an acute angle to each other with their cutting edges maintained in predetermined spaced parallel relationship, one edge of each blade having a contour dissimilar to the opposite edge of said blade and said holder having parts shaped to receive the dissimilar portions of each blade so that said blades can be fitted into said holder only in such a way as always to maintain the same relationship between their single-beveled cutting edges.

2,469,011
TRAIN PERFORMANCE CALCULATOR AND RECORDER
Spencer V. Smith, Wayne, Pa., assignor to The Pennsylvania Railroad Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 5, 1946, Serial No. 674,540
1 Claim. (Cl. 235—61)



In a device for calculating train performance data, means for producing a voltage proportional to tractive effort, means for adjusting and calibrating said voltage to correspond with predetermined acceleration values for a plurality of train speeds, means including a self-balancing potentiometer and an acceleration integrator for producing a second voltage proportional to speed and means including a self-balancing potentiometer and a speed integrator for producing an indication of distance.

2,469,012
HOE ATTACHMENT FOR RAKES
Will K. Smith, Arcadia, Calif.
Application September 24, 1946, Serial No. 698,944
1 Claim. (Cl. 56—400.05)



A hoe attachment for rakes comprising: a reversely bent metal sheet forming a channel for the snug accomodation of the back of a rake; said channel being provided at one end of one side thereof with a right angularly disposed blade extension; the side of said channel opposite said blade extension being cut away so as to leave the entire length of said blade unobstructed, and both sides of said channel being formed with aligned pairs of bolt holes arranged to intervene the tines of a rake to which said attachment is secured.

2,469,013
METHOD OF EVALUATING PAPER TOWELING OR THE LIKE
John Sobota, Green Bay, Wis., assignor to Fort Howard Paper Company, Green Bay, Wis., a corporation of Wisconsin
Application January 19, 1948, Serial No. 3,015
2 Claims. (Cl. 73—159)

1. The method of evaluating paper toweling or the like including the steps of supporting a circular extent of the toweling on a frame by engaging the peripheral portions thereof with said frame in such a manner that the portion of the towel within the engaged peripheral portions thereof is relatively taut and lies in substantially one plane only, then wetting said last mentioned portion of toweling, then supporting the frame in a horizontal plane, and then applying to the toweling at substantially the center thereof a progressively increasing number of weights of substantially the same shape as the portion of the toweling within the frame until the breaking point of the toweling is reached.

2,469,014
CHUCK
David Stålhandske, Bofors, Sweden
Application September 4, 1945, Serial No. 614,380
In Sweden February 8, 1944
5 Claims. (Cl. 279—55)

1. A chuck comprising a body having a taper bore, a collet adapted to carry a tool inserted

therein and having a tapered portion adapted to fit tightly in said taper bore of said body, and a locking nut having screw threads for screwing said nut to said body to secure said collet to said body, said collet having exteriorly a plurality of cams forming segments of a multiplex thread, said nut having interiorly a plurality of corresponding cams forming segments of a multiplex thread and being adapted to coact with said cams of said collet, said multiplex threads and said screw threads extending in opposite directions, said cams of said nut and said cams of said collet being adapted to engage each other and coact to loosen said collet from said body when unscrewing said nut.

2,469,015

METHOD AND COMPOSITIONS FOR PRODUCING SURFACE CONVERSION COATINGS ON ZINC

Jesse E. Stareck and Lester M. Corliss, Detroit, Mich., assignors to United Chromium, Incorporated, New York, N. Y., a corporation of Delaware

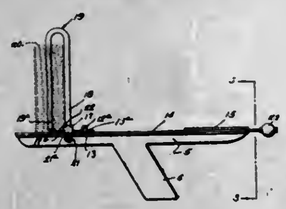
No Drawing. Application February 20, 1943, Serial No. 476,648

10 Claims. (Cl. 204—56)

1. A composition of matter for make-up of aqueous electrolytic baths for the production of surface conversion coatings on metals of the group consisting of zinc, tin, lead, copper and silver, having as its essential constituents a water soluble alkali-metal chromate and a water soluble compound containing auxiliary acid radicals of the group consisting of SO_4, F, SeO_4 and SiF_6 in the respective weight proportions

Cr^{VI}/SO_4=10:1 to 30:1

Cr^{VI}/SeO_4=10:1 to 30:1, Cr^{VI}/F=50:1 to 150:1 and Cr^{VI}/SiF_6=20:1 to 60:1, the amount of alkali metal in said composition being sufficient to impart a pH of 2 to 7 when dissolved in water.



2,469,016

GRAVITY FED DISK MAGAZINE

George M. Stopper, Glendale, Calif.

Application December 12, 1946, Serial No. 715,752

5 Claims. (Cl. 124—47)

1. A toy comprising a stock having a hand grip, a forward striker-supporting platform carried by said stock at one end thereof, and a U shaped feeder mechanism having one leg pivoted on said platform, the remaining leg of said feeder supporting a plurality of stacked discs, said last-mentioned leg of said U shaped feeder being spaced above said platform and being adapted to swing outwardly relative to said platform for reloading discs thereon.

2,469,017

METHOD OF TERMINATING THE POLYMERIZATION OF BUTADIENE-1,3 HYDROCARBONS

Sherman A. Sundet, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application June 8, 1945, Serial No. 598,408

3 Claims. (Cl. 260—84.3)

1. In a process wherein a monomeric butadiene-1,3 hydrocarbon is polymerized in aqueous emulsion in the presence of a peroxygen compound, the step which comprises supplying to the emulsion, at a time when 20 to 80% of the monomeric material is polymerized and the remainder thereof remains unpolymerized, an organic compound possessing the quinonoid structure and a water-soluble inorganic sulfide of the class consisting of hydrogen sulfide, ammonium sulfide and alkali metal sulfides and hydrosulfides, the said compound of quinonoid structure being supplied to the emulsion at least as soon as the said sulfide and in an amount from 0.001 to 0.05% by weight based on the amount of monomeric material originally present in the emulsion before polymerization, and the said sulfide being supplied to the emulsion in an amount from 0.01 to 0.2% by weight based on the amount of monomeric material originally present in the emulsion, whereby further polymerization of monomeric material is immediately terminated, and the unpolymerized monomeric material present in the emulsion permanently remains in the monomeric state.

2,469,018

CYLINDER LOCK KEY RETAINER AND POSITIONER

Gunnar E. Swanson, New Britain, Conn.

Application August 17, 1945, Serial No. 611,039

6 Claims. (Cl. 70—389)

1. A cylinder lock comprising in combination, a barrel having a longitudinal locking slot, a rotatable cylinder in the barrel provided with a longitudinal key slot and provided with locking means which projects into the barrel slot to prevent cylinder rotation and thereby effect locking and which upon insertion of a correctly bitted key is withdrawn from the said slot to permit cylinder rotation and thereby effect unlocking, a movable member carried by the cylinder and adapted to enter a notch in the key to prevent key withdrawal, means on the barrel which permits the said movable member to be moved out of the key notch when the cylinder is in locking position and which causes the said member to move into the key notch when the cylinder is turned out of locking position, and a spring which biases the said movable member for movement out of the key notch so as to permit key withdrawal when the cylinder is in locking position, the said spring in conjunction with the said movable member serving to indicate to the user that the cylinder has been turned to locking position and also serving to resist turning of the cylinder out of locking position.

2,469,019

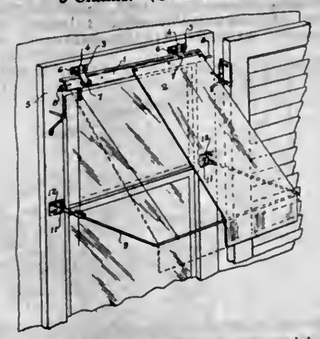
FARM GATE

Herbert K. Tabler, Plymouth, Ill., assignor to Imogene Tabler, Plymouth, Ill.

Application May 16, 1945, Serial No. 594,569

1 Claim. (Cl. 160—145)

A gate comprising longitudinal rails and vertical bars pivotally connected to the rails, means pivotally supporting one end of the gate for horizontal swinging movement, a longitudinally extending plate secured to the uppermost rail of the gate and having longitudinally spaced openings, a transversely extending pin selectively received in said openings, a lever pivoted at one end to said pin and extending downwardly therefrom, a member pivoted to the lower end of said lever and extending downwardly and toward the free end of the gate and attached at its opposite end to one of said uprights adjacent the free end of the gate, and a coil spring connecting the lower end of the lever to the hinged end of the gate.



2,469,020

AWNING HANGERS AND MEANS FOR SUSPENDING AWNINGS ON SAID HANGERS

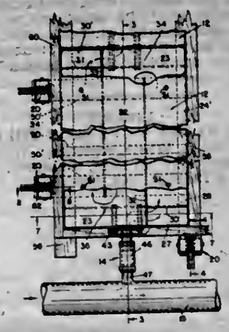
Robert D. Thomson, Lynn, Mass.

Application May 21, 1945, Serial No. 594,937

5 Claims. (Cl. 160—77)

2. An article of manufacture comprising an awning device adapted to be hung from suitable fixtures on a structure to be shaded by said device, a head provided with laterally projecting terminating pins, one on each end of the head, means on the head for engaging certain of the fixtures on the structure, and a frame comprising members certain of which have connected therewith slotted-eye-ends adapted to selectively engage certain of the fixtures on the structure and the above mentioned terminating pins.

2,469,021



PORTABLE ICE SKATING FLOOR

Herman Vetter, Los Angeles, Calif.

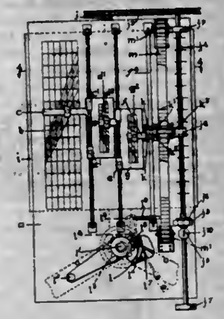
Application May 2, 1947, Serial No. 745,470

9 Claims. (Cl. 62—12)

1. In ice rink construction, a plurality of hollow floor sections joined together in edge to edge relation constructed and arranged for circulation of a refrigerant therethrough, means forming a curb around said sections, and resilient

means at spaced points along the outer side of said curb yieldably urging the curb against said sections.

2,469,022



COMPUTER FOR DETERMINING THE CORRECT PROPORTIONS OF INGREDIENTS FOR A SELECTED MIXTURE

Ronald William Walker and William George Jamieson, Glasgow, Scotland

Application April 22, 1946, Serial No. 663,904

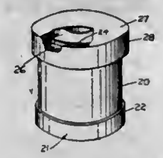
In Great Britain May 22, 1945

6 Claims. (Cl. 235—61)

5. An instrument for the purpose set forth comprising an indicator in the form of a series of graphs denoting the amount of a substance which must be added to various quantities of an ingredient in order to meet various specific requirements, a moveable member to register with said indicator, a second indicator which moves with said moveable member and which is in the form of a series of graphs denoting the alteration of the quantity of the substance to be added by virtue of the addition to the first ingredient of various amounts and qualities of a second ingredient, a second moveable member to register with the second indicator and which, by its position, determines the amount of the substance indicated by the setting of the first moveable member and altered by the setting of the second moveable member, the amount so determined being that which must be added to

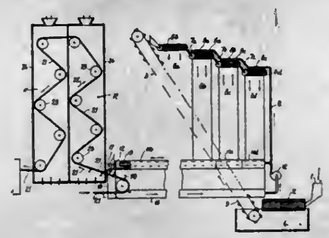
the combined quantities of the first and second ingredients in order to meet a specific requirement, a tank, means for adjusting the effective capacity of the tank, a cock controlling the inlet and discharge of the substance to and from said tank, and means whereby said cock can be operated only when the instrument and the effective capacity of the tank are adjusted to correspond.

2,469,023
PIVOTAL STAKE AND LATCH THEREFOR
William G. White, Aberdeen, Wash.
Application May 28, 1948, Serial No. 29,800
4 Claims. (Cl. 280—145)



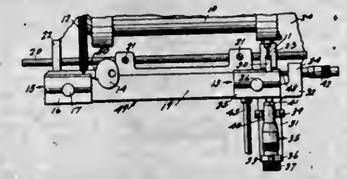
1. A stake bunk, comprising a bunk, a stake pivotally mounted on one end of said bunk, a hook extending laterally from said stake, a latch pivotally mounted on said bunk for cooperation with said hook to hold said stake at substantially right angles to said bunk, a crank fixed to said latch, a link pivotally connected to said crank and extending longitudinally of said bunk to the opposite end thereof, a cam roller journalled on said link, a cam fixed to said bunk for cooperation with said roller to hold said link in latch locking position, and a dog fixed to a manually operable lever and pivotally mounted on said bunk for cooperation with said link to lock said link in cam cooperating position.

2,469,024
FIRE ALARM SWITCH
Jacob W. Albrecht, Queens Village, N. Y., assignor to Dictograph Products Company, Inc., New York, N. Y., a corporation of Delaware
Application March 6, 1947, Serial No. 732,704
2 Claims. (Cl. 200—142)



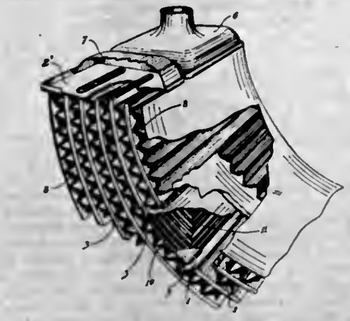
1. A switch comprising a support, a first leaf spring having a fixed end and a free end, said fixed end being mounted on the support and said free end carrying a first knife-like contact, a second leaf spring having a fixed end and a free end, said fixed end being mounted on the support and said free end carrying a second knife-like contact at an angle to said first contact, said second spring being biased for engagement of said second contact with said first contact, and a thermo-responsive element holding said second leaf spring retracted from said first leaf spring for release upon exposure of said element to a predetermined high temperature.

2,469,025
FILTER CARTRIDGE PACKAGE
Thomas Edward Aldham, East Providence, R. I., assignor to Fram Corporation, a corporation of Rhode Island
Application December 14, 1945, Serial No. 635,059
5 Claims. (Cl. 206—47)



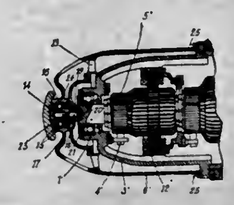
1. A filter cartridge package comprising an open ended tubular sleeve and a compressible cartridge of the sock type within said sleeve and frictionally engaging the inner surface thereof, an abutment at one end of the sleeve on the outer surface thereof to engage the filter case, comprising a thickened band of material with its end surface spaced inwardly from said end of the sleeve, a washer for the upper edge of a filter case positioned on said abutment encircling said sleeve, said washer being of a thickness less than the distance between said end surface and said end of the sleeve.

2,469,026
ARRANGEMENT FOR THE SALTING AND HOOKING OF FISH (HERRING)
Sverre A. Barstad, Stavanger, Norway
Application November 7, 1946, Serial No. 708,382
In Norway November 21, 1945
8 Claims. (Cl. 99—261)



1. In an apparatus for salting and hooking herrings to be smoked, the combination with a brine vessel of means for circulating the brine rapidly in a direction to an overflow for the brine, parallel tubes arranged immersed in the vessel, apertures in the tubes directed obliquely towards the overflow, means for circulating the brine through said tubes and through their apertures out into the vessel, whereby herrings dropped in uncontrolled positions into the vessel remote from the overflow are automatically caused to move towards same, head foremost, forms arranged outside the overflow to receive the herrings passing over same, moving hooks adapted to catch the herrings moved into the forms, conveyors carrying the hooks and moving them to pull the herrings out from the forms, and a smoking section, through which the conveyors with hooks and herrings hanging on same are moved for becoming smoked.

2,469,027
KEY CUTTING MACHINE
Harry Beisser, Oakland, Calif.
Application January 13, 1948, Serial No. 1,972
8 Claims. (Cl. 90—13.05)

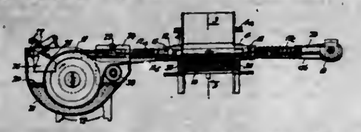


1. In a key cutting machine having a cutter and a stylus and a carrier having key blank clamping and locating means; a gauge for cooperation with said stylus and adjustably mounted on said carrier and including micrometers for adjusting said gauge respectively longitudinally of the carrier relative to the blank for establishing the location of the notch in the blank, and transversely of the carrier for establishing the depth of the notch; a combined master key clamp and slide mounted for longitudinal movement on said carrier and having said gauge slidable transversely therethrough; said micrometers being carried by said slide with one micrometer operating between the carrier and the slide, and the other operating between the slide and the gauge.

2,469,028
PLATE TYPE HEAT EXCHANGER
James Frank Belaieff, London, England, assignor of two-thirds to Cyril Terence Delaney and Gallay, Limited, London, England, a company of Great Britain
Application December 21, 1944, Serial No. 569,154
In Great Britain January 17, 1944
2 Claims. (Cl. 257—139)

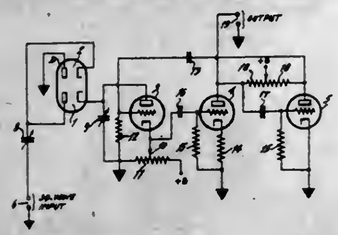
1. Heat exchange apparatus comprising an assembly having inlet and exit header means for relatively viscous fluid at one end thereof and inlet and exit header means for less viscous fluid at the other end thereof, the distance of the assembly from end to end between opposite header means being less at one side of the same than at the other, a first set of tubes shorter than said lesser distance for the relatively viscous fluid extending lengthwise of the assembly parallel to each other some of the distance between said inlet and exit header means and connected at one end to said first named inlet and exit header means, said tubes being closed at their ends remote from said first named inlet and exit header means and being divided internally into flow and return passages, and being all of the same length, and a second set of similarly formed tubes all of different lengths for the less viscous fluid, extending lengthwise of the assembly parallel to each other, from said less viscous inlet and exit header means approximately to the closed ends of said first named tubes and a third set of similarly formed tubes also for the less viscous fluid extending lengthwise of the assembly from said less viscous inlet and exit header means between the tubes of said second set and for the latter part of their extent between the tubes of said first set approximately to said opposite header means.

2,469,029
PROTECTING DEVICE FOR THE COMMUTATOR AND BRUSHES OF DYNAMO MACHINES
Charles William Berthiez, Paris, France
Application June 28, 1946, Serial No. 679,944
In France October 4, 1945
8 Claims. (Cl. 171—252)



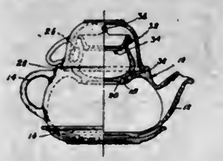
1. In a dynamo electric machine having a frame and a rotor, the combination with a bearing bracket supported by said frame of said machine, and a bearing for said rotor supported by said bearing bracket outwardly with respect to said frame along the axis of rotation toward an end of said rotor, said bracket being constructed to provide easy access to said rotor at either side thereof transversely of the axial direction, of a hood formed to be removably supported in position to cooperate with said frame to enclose a space about said bracket and said bearing and said end of said rotor, and means providing a disconnectible connection between the portion of said hood which extends about said end of said rotor adjacent said axis thereof and a part of said dynamo electric machine adjacent said axis for transmitting stress between said hood and said part, said connection being effected at a single point to provide for removal of said hood and the parts supported thereby as a whole.

2,469,030
PASTE-APPLYING MECHANISM
William A. Brown, Bronx, N. Y., assignor, by mesne assignments, to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware
Application January 5, 1945, Serial No. 571,512
10 Claims. (Cl. 91—54)



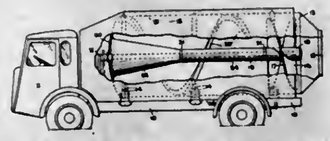
1. In a lap end pasting mechanism for labeling machines, means for supporting a stack of labels, an endless belt adapted to carry adhesive and arranged to travel crosswise of said stack, means for driving said belt, means for supplying adhesive thereto, and guides for di-

recting oppositely moving portions of said belt into contact with each other and with the foremost label of the stack intermediate its edges



and causing the contact of each of said belt portions with the label to continue to the opposite edges of the label.

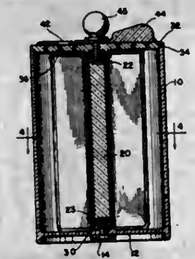
2,469,031
ELECTRONIC COUNTER CIRCUIT
Arthur E. Canfora, Brooklyn, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application September 6, 1945, Serial No. 614,789
1 Claim. (Cl. 250—27)



A counter circuit comprising a storage condenser, a charging condenser, a unilaterally conducting device connected between one plate of each of said condensers for admitting current from said charging condenser to said storage condenser, a second unilaterally conducting device connected between the junction of the charging condenser and the first-mentioned conducting device and the other plate of said charging condenser for discharging said charging condenser, means for impressing a pulsating current between the other plate of the storage condenser and the other plate of the charging condenser, first, second and third vacuum tubes, each having a cathode, an anode and a grid, a direct connection from said one plate of said storage condenser to the anode of the first tube whereby the anode of said first tube receives its polarizing potential solely from said charging condenser, individual resistors between the grids and cathodes of said respective tubes, adjustable biasing means connected to the cathode of said first tube for normally biasing said first tube to cut-off, a connection from the cathode of said first tube to the grid of said second tube, a connection from the anode of said second tube to the grid of said third tube, a feedback connection from the anode of said third tube to the grid of said first tube, said second and third tubes comprising normally conductive amplifiers, whereby a positive charge on said storage condenser of a value sufficient to overcome the cut-off bias on said first tube causes a positive pulse to be applied to the grid of said second tube, as a result of which a negative pulse is applied to the grid of the third tube and an inverted pulse of positive polarity is fed back to the grid of said first tube, to thereby hasten the flow of current through said first tube and discharge said storage condenser.

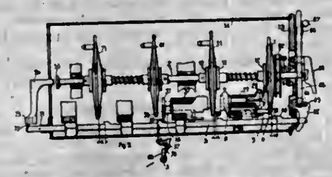
2,469,032
INDIVIDUAL TEA AND COFFEE SERVICE
Percy O. Chaudron, Cedartown, Ga.
Application August 21, 1946, Serial No. 692,651
5 Claims. (Cl. 222—115)

4. A tea and coffee service, comprising a pot having a top wall with fill-opening therein, an open top creamer having a base part for seating within said fill-opening as a removable closure therefor, a sugar bowl having a body portion of size and shape for seating within the open top of the creamer as a removable closure therefor and, selectively, for seating within said fill-opening of the pot as a removable closure therefor, an inverted cup adapted to rest on said top wall of the pot in covering relation to said fill-opening in said top wall, and adapted in said relation to enclose said creamer and sugar bowl when the creamer is seated in the fill-opening of the pot and the sugar bowl is seated in the top opening of the creamer, and means on the pot projecting above said top wall and adapted to engage the inverted cup exteriorly at a plurality of locations around the cup, thereby to restrain the cup against lateral movement relative to the pot.



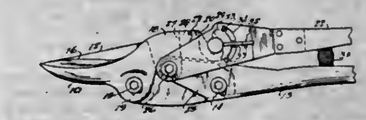
2,469,033
REFUSE COLLECTOR
Alexander Thomas Cameron Dear, Hill Top, West Bromwich, England, assignor to Lewin Road Sweepers Limited, West Bromwich, England, a British company
Application May 31, 1946, Serial No. 673,698
In Great Britain May 7, 1946
7 Claims. (Cl. 214—83.32)

1. In a refuse collector of the kind specified, the provision of a housing enclosing the feeding means shaft, said housing having an external diameter substantially larger than the diameter of the shaft, said housing including a sleeve of corresponding diameter extending for at least a substantial proportion of the length of the shaft, said sleeve extending continuously and completely around said shaft throughout the entire length of said sleeve, and means supporting said sleeve for free rotation about the axis of the shaft and relative to the receptacle.



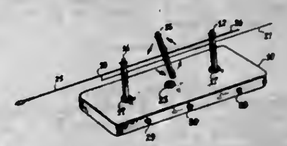
2,469,034
COMBINED CONDIMENT CONTAINER
Marian A. Garris, Seattle, Wash.
Application November 25, 1947, Serial No. 788,003
2 Claims. (Cl. 65—45)

1. A combined condiment container, consisting of: a body of substantially cylindrical form; a bottom for said body formed as part thereof, and raised above the lower end of said body; a partition member having a central core and a plurality of partition walls extending radially therefrom and adapted to form a plurality of chambers; enlarged fillets connecting said walls and said core; ridges formed on the interior of said body, in which are parallel walled grooves adapted to closely engage the outer edges of said partition walls; ridges formed on the upper surface of said bottom having parallel walled grooves adapted to closely engage the bottom edges of said partition walls; a cover plate adapted to seat within said body and to overlap the upper edge thereof; a plurality of groups of discharge holes formed in said cover plate; ridges on the under side of said cover plate, having parallel walled grooves



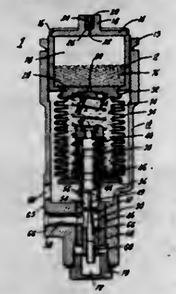
adapted to closely engage the upper edges of said partition walls and to thus angularly position said groups of holes centrally over said chambers; a selector plate disposed upon said cover plate and adapted to revolve concentrically therewith; a discharge opening formed in said selector plate and adapted to selectively engage a desired group of discharge holes and to close off the remaining groups of discharge holes; means for securing said partition member in said body; means for securing said cover plate to said partition member and in close engagement with said body and means for securing said selector plate revolvably, in close engagement with said cover plate.

2,469,035
ELECTROMECHANICAL DEVICE FOR GOVERNING PREDETERMINED CHANGES OF POSITION
Robert Gourdon, Paris, France, assignor to Centre d'Etudes M. B. A. (Mecanique, Balistique, Armement), Paris, France
Application January 15, 1947, Serial No. 722,196
In France January 16, 1946
10 Claims. (Cl. 74—110)



1. An electro-mechanical control device for producing predetermined changes of position, comprising a rotary longitudinally shiftable control-shaft, a longitudinally controlled rod, at least one electromagnet, an armature controlled thereby and including a longitudinally extending member adapted to be shifted by the energized electromagnet in a direction parallel to the shaft, a plate coaxial with the shaft and adapted to be driven thereby, at least one radial projection at the periphery of said plate, a projection on each rod adapted to be engaged by a projection on the plate and to be shifted longitudinally thereby when the shaft is shifted axially with the plate, a lateral projection on one side of the plate corresponding to each radial projection and adapted to engage the blade of the corresponding electromagnet in its energized state, and means to impart rotary and longitudinal movement to said control-shaft.

2,469,036
SHEET METAL SHEARS
John M. Hart, Fort Worth, Tex.
Application December 13, 1945, Serial No. 634,817
4 Claims. (Cl. 30—226)

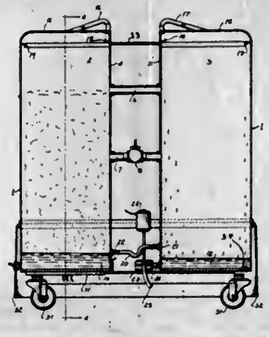


1. In sheet metal shears, in combination, a stationary cutting member, a pair of cutting jaws pivotally mounted on opposite sides of said stationary cutting member and each having a sharpened edge for shearing coaction with said stationary cutting member, a handle rigid with said cutting member and a handle having a pivotal connection with said first named handle, and means in the last named handle providing for the selective connection of said handle to said jaws for operation of either of said jaws relative to said stationary cutting member for making a single cut or for simultaneous operation of both said jaws relative to said stationary cutting member for making spaced, parallel cuts simultaneously.

2,469,037
FISHERMAN'S BARREL KNOT TIER
James W. Harvey, Lakeville, Conn.
Application February 21, 1947, Serial No. 730,153
12 Claims. (Cl. 289—17)

1. A knot tyer comprising a base plate, two spaced-apart supports projecting therefrom, each having a central post and two parallel resilient jaw members for holding strands to be twisted and a holding member between said supports having a central post and two spaced gripping jaws for holding the tips of the twisted strands while the remainder of said twisted strands are released from said supports and pulled so as to disengage the twisted strands from said holding member and permit the tips of the strands to be drawn through the twisted parts of the strands preparatory to pulling the knot tight.

2,469,038
PRESSURE RESPONSIVE VALVE MECHANISM
Albert H. Winkler, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application December 17, 1943, Serial No. 514,651
6 Claims. (Cl. 236—92)



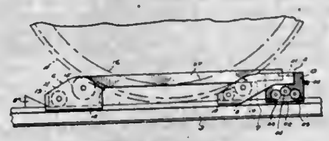
1. In a pressure responsive device: a hollow resilient member adapted to be expanded and compressed in response to variations in pressure on opposite sides thereof; a reservoir joined to one end of said hollow member; a calibrated passage connecting the reservoir and the interior of the hollow member; and auxiliary fluid containing means disposed around said hollow member and communicating freely with said reservoir; liquid filling the hollow member and partially filling the reservoir; a gas above the level of the liquid in the reservoir, the quantity of liquid in said reservoir being such as to cover said passage in all positions of said device, whereby the gas will be trapped in the auxiliary portion of the reservoir upon inversion of the device.

2,469,039
PUNCTURE SEALING COMPOSITION
Charles O. Hopping, Long Beach, Calif.
No Drawing. Application March 7, 1947, Serial No. 733,199
1 Claim. (Cl. 106—33)

The herein described composition for the purpose described, comprising one quart of water in which kelp has been soaked, six tablespoons of ground flax seed, one-quarter ounce steel wool, six tablespoons ground slippery elm, ten tablespoons of water floated silica.

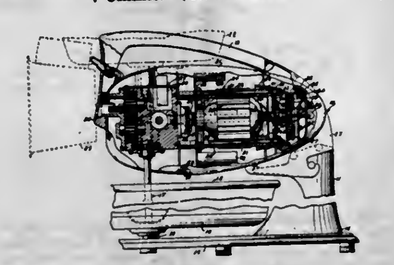
2,469,040
DEGREASING DEVICE
Mose Jaffa, Brooklyn, N. Y., assignor to Optimus Equipment Company, Matawan, N. J., a corporation of New Jersey
Application August 21, 1946, Serial No. 692,107
1 Claim. (Cl. 202—170)

A degreasing device for use with a vaporizable liquid whose vapor is a solvent for grease, said device comprising a tank, a pair of spaced partitions in said tank dividing it into two spaced compartments and an intermediate compartment, said spaced compartments being closed at the sides and bottom and open at the top, a zinc lining in each of the two spaced compartments to protect them against the corrosive action of the grease solvent, an electric heating element under the first of said two spaced compartments for heating the solvent and thereby causing it to vaporize, a removable cover at the top of said first compartment, forming a closure therefor and preventing the vapor from escaping, a conduit providing communication between the two spaced compartments adjacent their top ends, said conduit being sufficiently large to conduct vapor from the first of said spaced compartments to the second, a second conduit disposed below the first conduit and also providing communication between the two spaced compartments to further facilitate the flow of vapor from the first of said spaced compartments to the second, both of said conduits being disposed across the intermediate compartment, the lower of said conduits having a valve mounted therein which is disposed in said intermediate compartment and which is adapted to control the flow of vapor through said lower conduit, a third conduit mounted in said



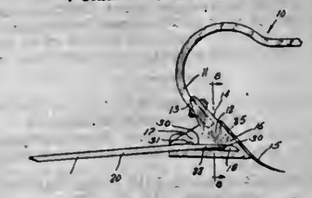
intermediate compartment, below the first two conduits, and also providing communication between the two spaced compartments, said lowermost conduit serving as a return duct for the vapor which passes through the first two conduits into the second of said spaced compartments and therein condenses, a cover being also provided for the second of said spaced compartments to prevent escape of the vapor therefrom, said intermediate compartment being also provided with a motor-driven pump which communicates at its inlet end with the bottom of the second of said spaced compartments, its outlet being connected to a flexible spraying hose, whereby the condensed solvent in the second of said spaced compartments may be sprayed upon objects which require degreasing.

2,469,041
METHODS FOR PREPARING ALUMINUM SOAPS AND CERTAIN CLASSES OF USEFUL COMPOSITIONS CONTAINING ALUMINUM SOAPS
Norman Lindsay Jones, Brighton, Victoria, Australia, assignor, by mesne assignments, to Standard-Vacuum Oil Company, a corporation of Delaware
No Drawing. Application January 10, 1947, Serial No. 721,452. In Australia September 2, 1946
5 Claims. (Cl. 252—35)



1. A method of preparing an aluminum soap grease which comprises preparing a solution of aluminum alkoxide in a hydrocarbon lubricating oil solvent, adding a higher fatty acid to said solution to convert said aluminum alkoxide to an aluminum soap and release alcohol, cooling to a normal temperature to produce a fluid lubricant, and thereafter adding a small amount of moisture to convert said fluid lubricant to a grease.

2,469,042
DOLLY FOR RAILWAY CARS, VEHICLES, AND OTHER OBJECTS
Eugene B. Kelley, Little Rock, and Harold B. Davis, North Little Rock, Ark.
Application October 4, 1945, Serial No. 620,328
1 Claim. (Cl. 105—141)

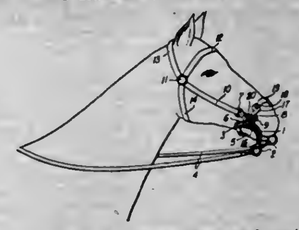


A dolly for lifting a car wheel off a rail and subsequently moving said wheel to move the car along said rail comprising a pair of roller supported carriages adapted to be mounted on the rail beneath the wheel at opposite sides of said wheel to move along said rail and carry said wheel, means on said carriages for supporting said wheel in lifted position and adapted to be engaged with said wheel to lift and support the same by movement of one carriage toward the other with the other carriage chocked against movement away from the moved carriage, means on said one carriage operative through engagement with the rail to move said one carriage toward the chocked carriage, and means for preventing retrograde movement of the moved carriage away from the chocked carriage including a ratchet toothed member fixed on the moved carriage and a ratchet toothed lever arm on the chocked carriage forced by the load of the lifted wheel on the chocked carriage to ratchet over said member.

2,469,043
CENTRIFUGAL GOVERNOR FOR MOTORS
Verne C. Kennedy, Evanston, Ill., assignor to Dormeyer Corporation, Chicago, Ill., a corporation of Illinois
Original application October 9, 1942, Serial No. 461,436. Divided and this application March 23, 1945, Serial No. 584,294
7 Claims. (Cl. 318—325)

4. A power unit for a food mixer comprising a a prime mover, a shell for said prime mover, an apertured partition in said shell, means for forcing air through the partition for cooling the prime mover, a speed governor connected in series with the prime mover including a rotating envelope having a body of liquid therein subject to centrifugation, said governor being located on the intake side of said apertures where the temperature of the cooling air is substantially constant.

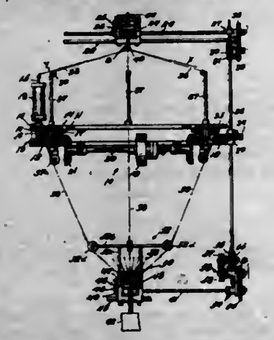
2,469,044
ADJUSTABLE PLOW SWEEP
Henry G. Lane, Bainbridge, Ga.
Application May 7, 1946, Serial No. 667,880
7 Claims. (Cl. 97—205)



1. In combination with a plow, a pair of adjustable sweeps, a rivet pivotally connecting said sweeps at their inner terminals, said sweeps being thickened rearwardly of the pivot and beveled on the inner edges at said thickened portions, said pivot having an enlarged upper head, a plow shoe having a horizontal slot to receive the sweeps and a groove over the slot to receive said head to retain the sweeps to the shoe and means whereby the head may be entered into the groove, said inner terminals of said sweeps having a binding action in said slot.

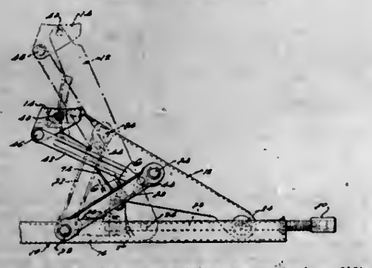
2,469,045
BUBBLE COMPOSITION
Joseph R. La Vietes, Brooklyn, N. Y.
No Drawing. Application May 25, 1946, Serial No. 672,331
6 Claims. (Cl. 252—307)

1. A composition for producing bubbles consisting essentially of a solution in water of a water-soluble gum capable of forming films, the amount of said gum being from 1.0 to 10.0%, and an alkyl aryl sulphonate soluble in water in an amount from 0.75 to 7.0%, the remainder of the composition being water.



2,469,046
BITLESS BRIDLE
Robert E. Laws, Kanab, Utah; Orpha M. Laws, administratrix of said Robert E. Laws, deceased, assignor to said Orpha M. Laws, Kanab, Utah
Application October 15, 1946, Serial No. 703,316
5 Claims. (Cl. 54—6)

1. A bitless harness for guiding and controlling horses comprising oppositely disposed inverted Y-shape side plates having eyes formed on the upper ends thereof, an arcuate rein supporting arm having an eye formed in each end thereof pivotally supported upon the rear arm of each of said inverted Y-shape side plates, guide means on the forward arm of each of said inverted Y-shape side plates, a nose bar supporting arm



pivotally supported on each of said arcuate rein supporting arms extending through said guide means, a nose bar connected between the outer ends of said nose bar supporting arms, a chin strap connected between the upper ends of said arcuate rein supporting arms, head straps attached to the eyes on the upper ends of said side plates, and reins attached to the eyes in the lower ends of said arcuate rein supporting arms.

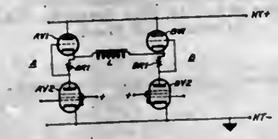
2,469,047
BRAIDING MACHINE
Hector Loader, New Bedford, Mass., assignor to Emsio Braid Corporation, a corporation of Massachusetts
Application October 1, 1947, Serial No. 777,226
8 Claims. (Cl. 87—29)

5. In a braiding machine, a guide plate for the braider carriers, horn gears beneath said plate for driving the carriers, work take-up rolls above said plate, rubber warp feed rolls beneath said plate, means to drive both take-up rolls and feed rolls from said horn gears whereby the take-up and feed rolls are driven in definite timed relation.

2,469,048
LIFTING MECHANISM
Raymond F. Manke, Racine, Wis., assignor to Walker Manufacturing Company of Wisconsin, Racine, Wis., a corporation of Wisconsin
Application June 24, 1946, Serial No. 678,917
21 Claims. (Cl. 254—126)

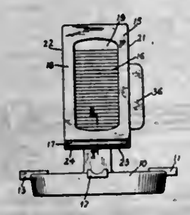
1. A lifting jack comprising a support, a lifting lever mounted upon said support for bodily movement relative to said support and having an end portion adapted to engage a load to be lifted, a reactive force member operatively connected to said lever intermediate the ends of said lever, means for applying power to the other end of said lever to rock the same about said force member, cam means bodily movable substantially longitudinally relative to said support for applying a powerful wedging action to said lever transversely between said ends to rock the lever about said other end, and stop means limiting movement of said cam means whereby said last named means is effective solely during initial movement of said lever.

2,469,049
PENCIL WITH BODY OF CONVOLUTELY WOUND PAPER
Kay Miller, New Brunswick, N. J., assignor to Joseph Dixon Crucible Company, Jersey City, N. J., a corporation of New Jersey
Application March 11, 1947, Serial No. 733,735
2 Claims. (Cl. 120—83)



1. A pencil comprising a core of marking material and a sheath enclosing the core consisting of flexible paper pulp material wound around the core and having the fibers of the sheet material disposed substantially parallel to the longitudinal axis of the sheath, the convolutions being secured together by a suitable adhesive, the paper pulp material of said sheath being impregnated with a lubricant.

2,469,050
ARTICULATE HANDLE FOR PAINT BRUSHES AND THE LIKE
Nicholas Mygas, West Orange, N. J.
Application May 11, 1945, Serial No. 593,299
1 Claim. (Cl. 15—146)

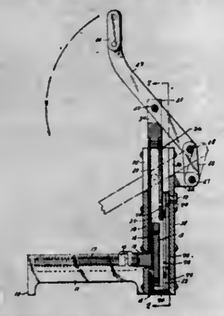


In a reversible articulated extension handle, the combination of a pair of articulated joint members comprising coaxial and codiametral, mutually rotatable cylindrical sleeves, said sleeves having mating, identical semi-cylindrical extensions, semi-cylindrical reenforcing blocks fixed within said semi-cylindrical extensions and forming bearing surfaces, said blocks and extensions being formed with registering apertures, a threaded boss integral with one said extension in register with said apertures, a wing bolt passing through said apertures serving as an axis for the sleeves and threaded in the boss to retain the sleeves in adjusted angular relation, a pair of semi-cylindrical clamping members having serrated clamping jaws, means to demountably secure said clamping members on and over one said sleeve, and the other said sleeve serving as a socket for a handle.

2,469,051
CATHODE-RAY TUBE DEFLECTING SYSTEM
Donald Leopold Plaistowe and Roger Prowse Shipway, Chelmsford, England, assignors to Radio Corporation of America, a corporation of Delaware
Application May 11, 1948, Serial No. 26,268
In Great Britain January 30, 1947
Section 1, Public Law 690, August 8, 1946
6 Claims. (Cl. 315—27)

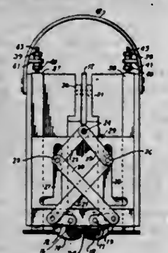
1. A circuit arrangement for a single coil type of electro-magnetic deflection system for a cathode ray tube said arrangement including two circuit arms in parallel with one another across a source of operating potential, each arm consisting of two controllable electron vacuum tube spaces in series, one space being arranged to have its conductivity controlled in dependence upon the current flow through the other so that when said other space is at or near cut-off said one space is fully conductive and vice versa; an electro-magnetic deflecting coil connected between corresponding intermediate points on said circuit arms, each point being between the two controllable vacuum tube spaces in the appropriate arm; and means for applying deflection controlling potentials to control the states of conductivity of the two said other vacuum tube spaces so that for deflection in one sense, the first of said other spaces is conductive and the second is at or near cut-off while for deflection in the other sense the conductivity states are reversed.

2,469,052
DEVICE FOR DISPENSING MATCHES
Samuel E. Rahe, Springfield Gardens, N. Y.
Application June 25, 1946, Serial No. 679,106
5 Claims. (Cl. 312—39)



1. A device for dispensing matches, comprising a receptacle for a comb of matches, said receptacle having an opening adjacent one end for exposing a match at one end of said comb, a member adjacent to said opening and adapted to move through said opening, means for moving said member and said receptacle relatively to move said member through said opening and sever said exposed match from said comb, and means movable relative to said receptacle and said member for engaging and clamping said comb in said receptacle while said match is being severed from said comb.

2,469,053
AUTOMATIC SEAR FOR AUTOMATIC AND SEMIAUTOMATIC FIREARMS
William C. Roemer, New Haven, Conn., assignor to Olin Industries, Inc., New Haven, Conn., a corporation of Delaware
Application March 30, 1945, Serial No. 585,666
1 Claim. (Cl. 89—149)

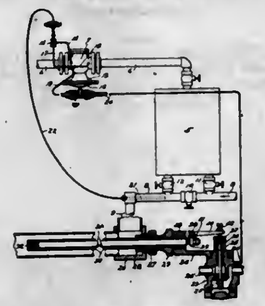


An automatic and semiautomatic firearm-structure including in combination: a receiver; a breech-bolt movable in the said receiver; a bolt-operating slide mounted for reciprocation adjacent the said receiver and operatively connected to the said breech-bolt for moving the same, the said bolt-operating slide being provided with a forwardly-facing tripping-abutment; a pivotal hammer provided with a primary-cocking abutment and a secondary-cocking abutment; a primary-sear located mainly to the rear of the said pivotal hammer and engageable with the primary-cocking abutment thereof to releasably hold the hammer in a cocked position; a trigger operatively connected to the said primary-sear for actuating the same; a substantially-vertical pivotal secondary-sear located mainly forwardly of the said pivotal hammer and pivoted to the firearm-structure adjacent its lower end, the said pivotal secondary-sear being formed above its pivot-point with a secondary-cocking abutment engageable with the secondary-cocking abutment of the said hammer to releasably restrain the latter; a reciprocating sear-actuating member movable substantially lengthwise of the said receiver and independently formed from the said secondary-sear, the said reciprocating sear-actuating member being operatively connected at its rear-portion to the said pivotal secondary-sear for positively swinging the same both forwardly and rearwardly, and the said reciprocating sear-actuating member also being provided adjacent its forward end with a rearwardly-facing tripping-abutment positioned to be engaged by the forwardly-facing tripping-abutment of the said bolt-operating slide to forwardly shift the sear-actuating member and cause the same to swing the said independently-formed pivotal secondary-sear to disengage the secondary-cocking abutment of the latter from the secondary-cocking abutment of the said hammer, the said sear-actuating member being formed intermediate its ends with a forwardly-opening spring-receiving pocket and located outwardly of the secondary-sear; and a helical spring mounted in the spring-receiving pocket of the sear-actuating member and yieldingly thrusting both the sear-actuating member and the secondary-sear rearwardly.

2,469,054
STAPLING MACHINE
Werner Schafroth, Brookline, Pa., assignor to International Staple and Machine Company, Clifton Heights, Pa., a corporation of Pennsylvania
Application November 19, 1945, Serial No. 629,354
10 Claims. (Cl. 1—49)

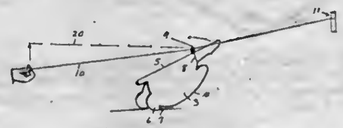
1. A stapling machine comprising a casing, anvils rotatably mounted in the lower part of the casing and positioned to extend beyond the casing when rotated, arms fixedly attached to the anvils extending upward into the casing, means connected to said arms for operative movement thereof to rotate the anvils to operative positions, and means driving staples from the casing against said anvils, said anvil rotating means and said staple driving means being operated in the sequence that the anvils pierce the material against which the machine is placed, and the staple driving means thereafter clinches the staples forced through the material and against the anvils.

2,469,055
STAPLING MACHINE
Werner Schafroth, Brookline, Pa., assignor to International Staple and Machine Company, Clifton Heights, Pa., a corporation of Pennsylvania
Application December 8, 1945, Serial No. 633,677
7 Claims. (Cl. 1—49)



7. A stapling machine comprising a casing, anvils rotatably mounted in the lower part of the casing and positioned to extend beyond the base of said casing when rotated, arms fixedly attached to the anvils extending upward into the casing, means connected to said arms for operative movement thereof to rotate the anvils to operative positions, means driving staples from the casing against said anvils, and a pair of legs adapted to be adjustably extended from the base of said casing by means of manually adjustable nuts for adjusting the distance of the base of the casing from materials being stapled, said anvil rotating means and said staple driving means being operated in the sequence that the anvils pierce the material against which the machine is placed, and the staple driving means thereafter clinches the staples forced through the material and against the anvils.

2,469,056
ELECTROMAGNETIC VALVE-KEEPER REMOVER AND RETRIEVER
George Scripture, Oakland, Calif.
Application March 18, 1946, Serial No. 655,333
3 Claims. (Cl. 81—3)



1. A retrieving tool comprising a magnetizable core bent diagonally outwardly at one end and terminating in a wedge-shaped end at right angles to the axis of the straight portion of said core and forming a point at the outward end of the wedge for insertion between the halves of a valve keeper for spreading the halves for removal from a valve stem, and an inductance for energizing said core to remove said halves, and a pair of conductors including a switch for said inductance.

2,469,057
SAFETY DEVICE FOR TEMPERATURE REGULATORS
Paulsen Spence, Hot Springs, Ark., assignor to Spence Engineering Company, Inc., Walden, N. Y., a corporation of New York
Application June 26, 1943, Serial No. 492,386
4 Claims. (Cl. 236—21)

1. In a device of the character indicated, a valve, fluid pressure actuated means for actuating said valve, a thermostatic pilot valve for normally controlling pressure on one side of said fluid pressure actuated means for controlling said main valve, and a second thermostatically actuated valve independent of said pilot valve for quickly venting pressure fluid from said one side of said fluid pressure actuated means, said second thermostatically actuated valve including a valve member directly and positively thermostatically actuable in an opening direction for the purpose described.

2,469,058
GAME DEVICE
Ramon E. Sullivan, San Francisco, Calif.
Application November 25, 1946, Serial No. 712,185
7 Claims. (Cl. 46—149)

1. A game device comprising a pair of pieces of sheet material of substantially corresponding outline, said pieces being joined along one of their corresponding edges and extending divergently downwardly from such juncture whereby said pieces form the sides of an inverted V, the lower free edges of said pieces being convexly curved longitudinally thereof to provide rockers for supporting said device on the floor, an eye member secured to said device at a point along the juncture between said pieces and at one side of a vertical plane bisecting said pieces at right angles thereto, a flexible line adapted to extend generally horizontally through said eye member for securement at one end thereof to a stationary object and for grasping at its opposite ends by the hand for manipulating the line to cause rocking of said device on the floor and its progressive advancement along said line from one end to the other.

2,469,059
OXIDIZED OLEFIN LIQUIDS
Amos Turk, Mount Lebanon, Pa., assignor of fifty per cent to Paul D. Boone, Washington, D. C.
No Drawing. Application September 18, 1944, Serial No. 554,727
11 Claims. (Cl. 260—406)

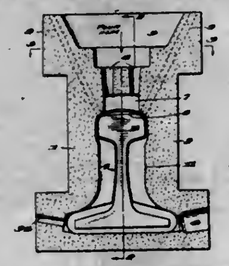
1. In the process of producing liquid oxidized compounds containing at least one olefine group, the steps of heating an oily liquid from the group consisting of olefinic unsaturated higher fatty acids and their gylceride esters with selenium dioxide in the ratio of not less than one-twentieth of a mol per mol equivalent of unsaturated higher fatty acid radical at not above substantially 111° C. in the presence of an organic solvent for one of the reacting components, whereby a CH_2 group adjacent an olefine carbon atom is oxidized to an alcohol group, and thereafter removing metallic selenium from the oily liquid.

2,469,060
FLEXIBLE MOP HEAD
Peter S. Vosbikian and Thomas S. Vosbikian, Melrose, Pa.
Application July 9, 1948, Serial No. 37,884
1 Claim. (Cl. 15—119)

A flexible mop head, comprising an elongated block of absorbent sponge material, a backing strip of flexible rubber secured to and covering substantially the entire area of the top face of said block and extending sufficiently beyond an edge thereof to form a flexible, straight line squeegee, a handle socket, and means to secure said socket to said strip centrally of its ends to provide flexible end portions at opposite sides of the socket, said end portions being flexible in

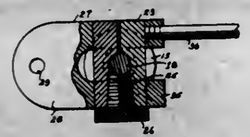
either direction whereby the sponge material may be compressed between the two flexed end portions of said strip and to permit cleaning the corner of a room.

2,469,061
BALL TARGET
Ward Barto, Denver, Colo.
Application July 10, 1946, Serial No. 682,542
4 Claims. (Cl. 273—102.1)



1. A game consisting of a supporting frame, a downwardly inclined back member on said frame, a bell, bracket means for supporting said bell at the top of said supporting frame, a target hingedly attached to the top of said frame a..d disposed immediately in front and within striking distance of said bell, a second target means pivotally attached to said sloping back member for releasably supporting a captive ball on the inclined back member, and a chute for retrieving both thrown and captive balls.

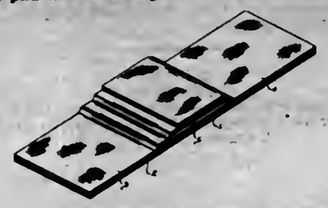
2,469,062
APPARATUS FOR FULL FUSION WELDING OF RAILS
Edward F. Bertrup, Elizabeth, N. J.
Application October 14, 1944, Serial No. 558,703
5 Claims. (Cl. 22—116)



1. A mold for the full fusion welding of metal parts using superheated weld metal which comprises mold parts adapted to surround and enclose the ends of two metal parts to be welded which are aligned end to end with a welding gap therebetween, said mold parts defining an upper pouring basin and a mold cavity having a fusion collar-forming section surrounding said weld-

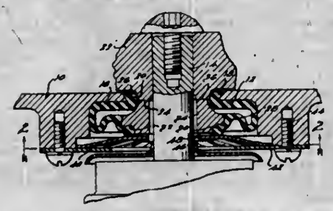
ing gap, at least one pouring gate having a directional flow channel connecting said pouring basin with said mold cavity positioned and dimensioned in such manner that weld metal passes through said welding gap between the metal parts to be welded without contacting said metal parts, said directional flow channel being positioned between said pouring gate and said fusion collar-forming section of said mold cavity

with a vertical dimension not substantially less than the width of the welding gap and being in the form of a slot beneath the lower end of said pouring gate running in the direction of the welding gap and being provided with substantially vertical walls on either side of said welding gap spaced apart a distance not greater than the width of said welding gap, whereby spattering of weld metal on the metal parts is prevented.



2,469,063
PAN-TILT TRIPOD HEAD
William H. Bliss, Natchitoches, La.
Application September 8, 1947, Serial No. 772,663
2 Claims. (Cl. 248—183)

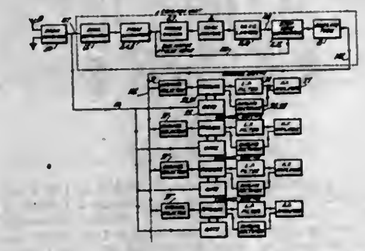
1. In a tripod head having a base and a vertically-extending pivot removably secured to said base the improvement comprising, a split horizontal pivot shaft fitted about the vertical pivot and having grooves to receive the same, a camera support connected to the horizontal split pivot and adapted to have a camera secured to the same, and a handle rod entering the camera support to simultaneously fix the camera support to the split horizontal pivot and the split horizontal pivot parts to the vertical pivot, and said split horizontal pivot having means for expanding the same to fix the camera support to the horizontal pivot independently of the handle rod whereby upon loosening the handle rod, the camera support may be swung about the vertical pivot in a horizontal plane.



2,469,064
ADHESIVE COMPRESS
Edmund M. Campbell, Pittsburgh, Pa., assignor to Mine Safety Appliances Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application February 7, 1945, Serial No. 576,604
3 Claims. (Cl. 128—156)

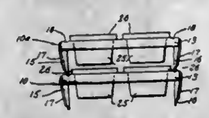
1. An adhesive compress comprising an adhesive tape, a dressing pad adhering to the central portion of the adhesive side of the tape, two overlapping strips of protective fabric overlying said pad and adhering to the tape on opposite

sides of the pad, and a separator non-adherent to the pad disposed between the pad and inner protective strip to keep the latter from sticking to the pad.



2,469,065
SEAL
George R. Coss, Detroit, Mich., assignor to Eureka Williams Corporation, a corporation of Michigan
Application October 22, 1945, Serial No. 623,721
4 Claims. (Cl. 286—11)

1. Seal construction for a wall having an opening defining a seat with a shaft extending through said opening, a bellows having one end thereof secured in and sealed to said seat, a sealing ring surrounding said shaft and carried by and sealed to the other end of said bellows, a sealing member secured to said shaft and having an annular sealing surface and a cylindrical sealing surface, said sealing ring having an annular sealing surface engaged with said annular sealing surface of said sealing member, and said bellows having a cylindrical sealing surface engaged with said cylindrical sealing surface of said sealing member, and means resiliently urging said annular sealing surfaces in engagement.



2,469,066
PULSE MULTIPLEX RECEIVER
James R. Day, Peconic, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application June 1, 1946, Serial No. 673,746
7 Claims. (Cl. 179—15)

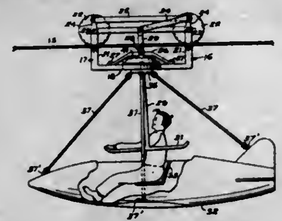
1. A pulse multiplex receiving system for receiving from a remote transmitting system a plurality of equal duration spaced channel pulses followed by a synchronizing pulse, comprising a receiver for producing spaced video pulses which occur at time intervals corresponding to the received pulses, a separator circuit for separating the video pulse representative of the synchronizing pulse from the channel pulses, a discharge pulse generator coupled to said separator circuit for producing a pulse for each synchronizing video pulse supplied thereto, a phasing trigger circuit coupled to the output of said discharge pulse generator, said phasing trigger circuit having means for producing a peak voltage which occurs an adjustable interval of time after the pulse supplied thereto by said discharge pulse generator, a sine wave generator coupled to the output of said phasing trigger circuit and responsive to the peak voltage passed thereto, a limiter in the output of said sine wave generator, a step wave generator coupled to the output of said limiter and responsive to the limited waves for producing a step voltage wave having a desired number of steps or risers, a connection from the

output of said discharge pulse generator to said step wave generator for controlling the termination of the step voltage wave produced by said step wave generator, a plurality of channel units coupled to the output of said step wave generator, a connection from said channel units to the output of said receiver to obtain therefrom video channel pulses, said channel units having individual selector circuits which are differently biased to become conductive on different risers of the step voltage wave, and said channel units having apparatus for converting the video channel pulses to variable width pulses.

2,469,067
ICE CUBE TRAY
Cornelius Marvin Follin, La Mesa, Calif.
Application June 2, 1947, Serial No. 751,678
4 Claims. (Cl. 62—108.5)

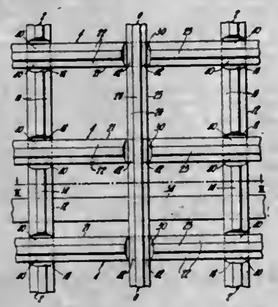
1. An ice cube tray comprising a flat top provided with a series of openings therein, side flanges extending downwardly from the side edges of the top and forming a pair of spaced supports for said top, a flange projecting downwardly from each opposite end of the top for a short distance and connected at the ends thereof to the adjacent ends of the side flanges, cups received by the openings and means on the cups engageable with the top for retaining said cups suspended in said openings, said top having a pair of longitudinally extended parallel grooves adapted to slidably receive the lower edges of the side flanges of a superimposed tray when a pair of trays are placed in an ice cube freezing compartment of a refrigerator.

2,469,068
AUTOMOBILE BODY CONSTRUCTION
Shelley W. Ford, Dayton, Ohio, assignor of one-half to J. Frederic Gagel, Dayton, Ohio
Application December 16, 1943, Serial No. 514,480
2 Claims. (Cl. 296—37)



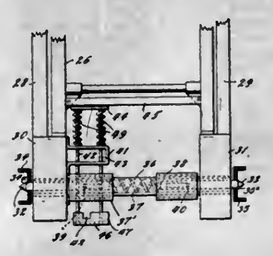
1. An automobile body construction of the character described comprising a main body portion, a compartment for baggage and the like housed within said body portion, a cover for said compartment and connected to said body portion at one edge of said compartment and hinged thereto by concealed hinges located to permit swinging of the cover about a horizontal axis for opening and closing movement, a locking means carried by said cover and located adjacent the edge opposite to said hinge connection and operable to be moved to unlocking position for opening of the cover and to locked position to hold the cover in closed position, said cover having a dished and inwardly stamped portion comprising an integral wall to form a compartment therein for receiving a suit of clothes and the like suspended in an inclined position upon the bottom wall of said compartment, means within said compartment to support said clothes, and a second cover for said clothes receiving compartment movably connected to said first cover by concealed hinges mounted along a side edge of the compartment to permit movement of said second cover to open or close the second compartment without disturbing the first cover, means for fastening said second cover in closed position, means for holding said second cover in elevated position to give access to the second compartment, said second cover when in closed position being substantially flush with and in continuation of the external surface of said main cover, said first and second cover having cooperating means for protecting said compartment against weather conditions when closed, and the construction being such that when both said covers are in closed position they conform to the external surface of the automobile body.

2,469,069
TROLLEY SUSPENDED PLAYGROUND DEVICE
Don C. Grazier, Dixon, Mont.
Application July 23, 1947, Serial No. 763,092
2 Claims. (Cl. 105—148)



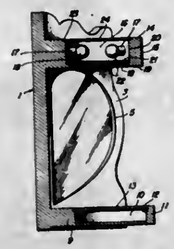
1. A playground device comprising a supporting and propelling mechanism adapted to be supported upon a line and to be propelled thereover, said supporting and propelling mechanism including a substantially rectangular shaped frame, drive wheels journalled on the frame at each upper corner thereof and adapted to engage with the line or cable, a lever depending from the frame and pivoted thereupon and adapted to effect rotation of the wheels, said lever being connected to the wheels through a connecting member and a crank arm, a body member adapted to support an occupant suspended from the supporting mechanism, means for connecting the

body member to the frame for rotation about a vertical axis said connecting means including a sleeve with a radially outwardly extending flange, thrust bearings mounted in the flange in supporting relation between said frame and said flange on said sleeve whereby the transmission of the thrust carried by the weight of the body



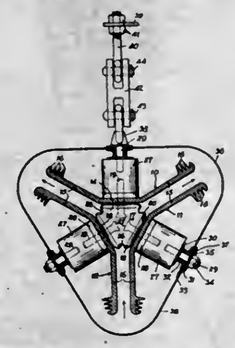
member and its occupant is from the sleeve to the balls to the frame, cover means fixed to the frame and extending over the frame for the protection thereof and said lever extending toward the body to be accessible to the occupant whereby as the lever is operated, the drive wheels will be rotated to cause the supporting and propelling mechanism to be actuated.

2,469,070
OPEN FLOOR GRATING AND METHOD OF MAKING THE SAME
Gerald G. Grenlich, Mount Lebanon, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application December 14, 1945, Serial No. 635,035
6 Claims. (Cl. 94—30)



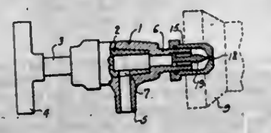
1. An open floor grating comprising a plurality of longitudinally extending members each having a top flange and a downwardly extending web, a plurality of transverse secondary members each having a top flange and a downwardly extending web, the flanges and webs of the primary members having portions cut away at spaced intervals to provide transverse openings therethrough for the transverse members, each of said transverse openings having a bottom formed by and extending the width of the flange, the bottoms of the flanges of the secondary members resting on the said bottoms of the openings and being welded to the flanges of the primary members throughout the area of the bottoms of the openings.

2,469,071
LADDER CONSTRUCTION
James Kydd, Ozone Park, N. Y., assignor to Metropolitan Device Corporation, Brooklyn, N. Y., a corporation of New York
Application February 16, 1944, Serial No. 522,541
2 Claims. (Cl. 228—48)



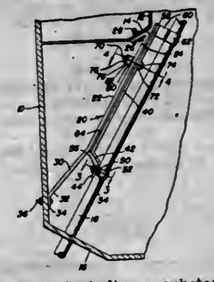
1. In a portable ladder construction of the kind described, the combination comprising a frame, a ladder having side rails and rungs pivotally mounted in the frame, the ladder including an extension section, means carried by the frame and the ladder for securing the ladder in various angular positions, and means actuated upon movement of the extension section to extended position for locking said securing means.

2,469,072
CORNER WALL LAMP
Joseph Lerman, Brooklyn, N. Y.
Application April 30, 1946, Serial No. 665,948
4 Claims. (Cl. 240—2)



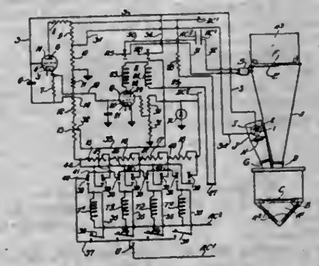
1. A corner wall lamp including an integrally formed frame having outwardly extending apertured side walls arranged at right angles to each other, mirrors in said apertures in the side walls, an apertured light bulb receiving compartment extending forwardly above said mirrors integrally connected with said side walls, light bulbs therein, a transparent disc seated in the lower end of said compartment, a removable disc closure for the upper end of said compartment and a storage compartment extending horizontally at the lower end of the side walls and having a reflecting surface disposed in vertical alignment with the transparent disc in the light bulb receiving compartment.

2,469,073
ELECTRICAL BUS
Bruce E. McArthur, Medina, Ohio, and Donald I. Bohn and Robert N. Wagner, Pittsburgh, Pa., assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application March 23, 1948, Serial No. 16,434
10 Claims. (Cl. 174—99)



1. A three-phase bus bar structure comprising three parallel conductors of wide angle trough form, each having a substantially flat central portion and integral side portions in angular relation of about 30° with respect to the central portion, said conductors being assembled in Y-relationship, a plurality of centrally disposed insulators located at intervals along the length of said conductors and separating them in predetermined spaced apart relation, radially extending attaching elements carried by said insulators and extending through the central portion of said conductors, respectively, to the outer sides thereof, and clamping members on the outer ends of said attaching elements for clamping said conductors against said central insulators.

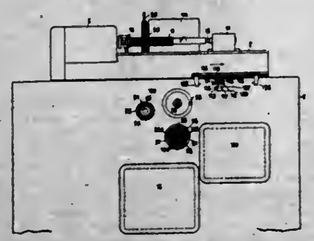
2,469,074
HOOD FOR GAS VALVES
Ervin H. Mueller, Grosse Pointe, Mich.
Application August 21, 1946, Serial No. 692,038
2 Claims. (Cl. 158—118)



1. In a gas appliance having a hollow part for the flow of gas and which part is provided with external threads, a hood of hollow formation provided with an outlet orifice and having internal threads for engaging said external threads, said hood having an internal circumferential recess therein, said recess being positioned within the hood so that the internal threads have some of its convolutions in advance thereof which constitute a lead thread, and an unthreaded washer of elastic or resilient characteristic situated in said groove and having an internal diameter such as to engage the external threads on the said hollow part whereby to establish frictional engagement of the hood with said hollow part and a sealed joint to prevent escape of gas, said lead threads being partially cut away to increase the internal diameter to facilitate assembly of the washer in its groove.

2,469,075
VIBRATION ELIMINATING SUPPORT FOR STEERING COLUMNS
Louie R. Faun, Granton, Wis.
Application February 12, 1948, Serial No. 7,973
4 Claims. (Cl. 180—90)

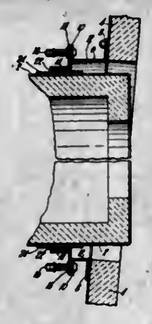
1. In a vehicle including a substantially vertical dashboard, a gauge holding panel spaced relative to the dashboard, and a steering column inclined relative to the dashboard; an inclined brace connecting the gauge holding panel to the dashboard, said brace having an elongated central portion spaced parallel to the longitudinal axis of the steering column, a support adjustably carried by the steering column, said support having a central portion spaced parallel to the central portion of said brace, means connecting the support to the brace, and a cushion member interposed between the support and the brace.



2,469,076
PHOTOGRAPHIC PRINTING EXPOSURE CONTROL METHOD AND APPARATUS
Jacob Rabinowitz, Brooklyn, N. Y., assignor, by mesne assignments, to Pavelle Color Incorporated, New York, N. Y., a corporation of Delaware
Application May 18, 1945, Serial No. 594,403
15 Claims. (Cl. 88—24)

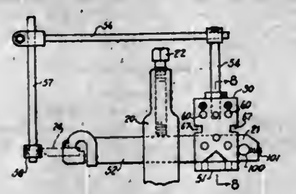
1. In controlling the exposure period of a projection printer reproducing a picture on a transparency by transmitting light through the transparency, the method which consists in charging a condenser by subjecting it to a charging voltage and varying said charging voltage in predetermined accordance with the difference be-

tween the light transmitting capacity of a selected portion of the transparency picture and the light transmitting capacity of another portion of the transparency picture, and in transmitting a light through the transparency to the cathode at a rate in definite proportion to the average light transmitting capacity of the transparency and thereby creating a current flow through said tube of a magnitude dependent on the amount of light transmitted to said cathode and passing said current from the phototube to said condenser to discharge the latter at a rate automatically dependent on the magnitude of the current flow through the phototube.



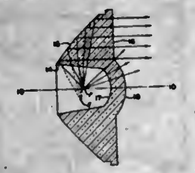
2,469,077
MACHINE TOOL WITH AUTOMATIC FEED DEVICE
Alfred Rickenmann, Kusnacht, near Zurich, Switzerland
Application July 31, 1947, Serial No. 765,062
14 Claims. (Cl. 51—95)

1. In a machine tool, in combination, a frame, means for supporting and rotating a workpiece lengthwise of said frame between centers, said means including a carriage reciprocable lengthwise of said frame; a tool carriage slidably supported in said frame and movable transversely with respect to said workpiece supporting carriage, a tool mounted on said tool carriage, and transverse feed means for said tool carriage adapted to produce a predetermined total amount of feed of the tool carriage in at least two steps, said last named transverse feed means including means for adjusting the transverse feed movement of the tool carriage to a fixed fractional amount of the total feed at the start of each pass of the workpiece past said tool with the exception of the last one, said transverse feed means being also provided with means for automatically adjusting the transverse feed required for the last one of the steps in such a manner that the desired predetermined total amount of the feed of the tool carriage is accurately obtained.



2,469,078
SEAL FOR ROTARY KILNS
Sidney J. Robison, Chicago, Ill., assignor to Universal Atlas Cement Company, a corporation of Indiana
Application May 8, 1945, Serial No. 592,599
2 Claims. (Cl. 263—33)

2. A seal for rotary kilns and the like having a rotatable member and a stationary chamber in communication therewith comprising a wear resistant band mounted around said rotatable member adjacent said chamber, an annular channel having a web of varying width and having one flange normal to the axis of said channel and the other flange normal to the axis of rotation of said rotatable member, said channel being mounted on said stationary member about said band by means of said first mentioned flange, a plurality of arcuate segments slidably

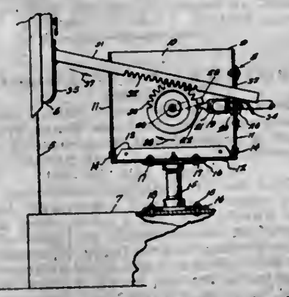


mounted on the other of said flanges, a heat resistant lining on the inside of said segments, said segments being resiliently connected together to form a yieldable sealing ring around said rotatable member and to hold said ring in sealing contact with said band.

2,469,079
MACHINE TOOL SUPPORT
Harry Rosenbloom, Detroit, Mich.
Application February 7, 1946, Serial No. 646,180
2 Claims. (Cl. 248—226)

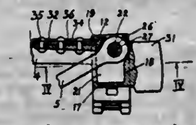
1. A supporting block device adapted to be mounted upon a tool holder and a boring bar of a machine tool such as a lathe for in turn adjustably and rigidly supporting a guiding instrumentality for governing the relative movement between a work piece and a cutting tool comprising, a body, said body having a passage therethrough for fitting over a tool holder, set screws for clamping the body to the tool holder, said body having at least one aperture therethrough extending at right angles to the passage for the reception of a supporting arm, set screw means on the body for clamping said arm, a removable closure piece for the passage, said block, on opposite sides of the passage, having inverted substantially V-shaped notches, whereby the body may be turned through substantially right angles and mounted upon a boring bar and means formed in the body for receiving a clamp for engaging the boring bar on the opposite side of same from the inverted notches.

2,469,080
UNITARY LENS UNIT
Seymour Rosin and George M. Cressaty, New York, N. Y.; said Rosin assignor to said Cressaty
Application May 9, 1945, Serial No. 592,742
1 Claim. (Cl. 240—106.1)



A unitary lens unit comprising in combination, a central transparent window for transmitting paraxial rays without change of direction, a marginal lens block having a well to receive a source of light, a reflecting surface on the outer boundary of said block for reflecting marginal rays from the source of light into a parallel beam, said source of light positioned on the optical axis of said reflecting surface, said reflecting surface comprising a surface of revolution of a parabola about an axis parallel but not coincident with the parabolic axis.

2,469,081
REFRACTORY CONCRETE, MIX THEREFOR, AND METHOD OF MAKING
Arthur F. Ruedi, Hammond, Ind., assignor to Universal Atlas Cement Company, a corporation of Indiana
No Drawing. Application February 28, 1947, Serial No. 731,714
13 Claims. (Cl. 106—58)

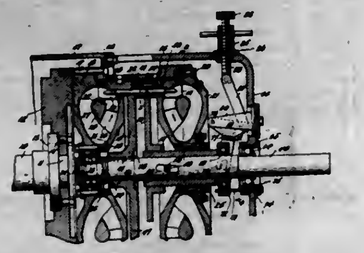


1. A mix for forming refractory concrete comprising calcium aluminate cement from 50 to 92% by weight of the mix, refractory aggregate from 4 to 50% by weight of the mix, said refractory aggregate consisting of at least 66⅔% by weight thereof expanded vermiculite, and $MgCl_2$ from 0.5 to 3.5 by weight of the mix.

2,469,082
DOOR OPERATED SAFETY DEVICE FOR OIL BURNING FURNACES
Frank B. Scanlon, Beachwood, N. J.
Application July 9, 1946, Serial No. 682,409
6 Claims. (Cl. 158—42.1)

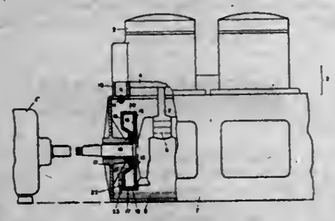
1. In combination with an oil burning furnace having a closure, an igniting mechanism, and a fuel line; a safety device comprising a framework, an oscillatory member carried by the framework, a switch carried by the framework, a circuit for the igniting mechanism of the furnace including said switch, a valve carried by the framework for controlling the fuel line for the furnace, a pair of actuating members carried by the oscillatory member, one of said actuating members operatively engaging the switch, the other of said actuating members operatively engaging the valve, and means operatively connecting the oscillatory member to the closure for simultaneously opening the switch and closing the valve upon opening of the closure.

2,469,083
BRAKE BEAM
Frederic Schaefer, Pittsburgh, Pa.
Application November 13, 1945, Serial No. 59,794
7 Claims. (Cl. 188—223.6)



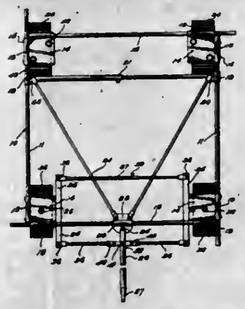
1. A brake beam for use with a railway car truck provided with a pair of beam-supporting ledges, said beam comprising a channel shape compression member having top and bottom flanges joined by a web, a brake shoe supporting member disposed at each end of said compression member, each brake shoe supporting member being provided at one side with a tongue projecting laterally into the adjoining end of the compression member and at the other side with a laterally projecting lug adapted to be slidably supported by the adjoining ledge, and a plurality of fastening members extending through each tongue and adjoining compression member web at longitudinally spaced intervals to hold them tightly together, each end portion of said web having an inside rib extending lengthwise of it, and each of said tongues being provided with a longitudinally extending groove snugly receiving the adjoining rib.

2,469,084
BODY RESTING APPLIANCE
Abraham W. Schenker, New York, N. Y.
Application January 1, 1945, Serial No. 570,980
9 Claims. (Cl. 5—91)



8. A therapeutic body resting structure of the class described designed to support a body in supine position comprising a relatively rigid member of unyielding material having its upper surface formed with longitudinal waves and curves in conformity with the posterior aspect of the body of the user, a layer of relatively resilient material overlying the said upper surface of said rigid member, the upper surface of said resilient layer being normally at uniform level without undulations and means for resiliently supporting said rigid member, the contour of said unyielding member being characterized by the fact that there is provided a portion adapted to support the knees at a higher level than that of the buttocks of the user.

2,469,085
HYDRAULIC POWER TRANSMISSION
Richard H. Sheppard, Hanover, Pa.
Application March 20, 1944, Serial No. 527,316
4 Claims. (Cl. 60—54)

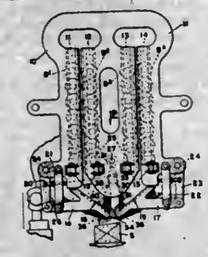


3. In a hydraulic power transmission for connecting a drive shaft with a coaxial driven shaft, an impeller unit rotating with the drive shaft and having therein two spaced and separate torus chambers and having on the near sides only of the two chambers a series of fixed blades for confining a portion of the fluid to cause the fluid to rotate with the drive shaft, a turbine rotor mounted on the driven shaft and carrying a plurality of spindles extending into each of the two torus chambers, vanes mounted one on each end of each spindle and means for simultaneously tilting all of the vanes to move them to or from a radial position, said means including a gear movable about the axes of the shafts and also shiftable axially.

2,469,086
RECIPROCATING COMPRESSOR HAVING MEANS FOR SEPARATING GASEOUS REFRIGERANT FROM FOAM
Daniel F. Shepherd, Syracuse, N. Y., assignor to Carrier Corporation, Syracuse, N. Y., a corporation of Delaware
Application December 6, 1946, Serial No. 714,581
11 Claims. (Cl. 230—206)

1. In apparatus of the character described, the combination of a compressor, a suction line connected to the compressor, an oil sump serving as a source of lubricant for various elements of the compressor, and a separator fan for separating gaseous refrigerant from oil in foam created at start-up of the compressor, the separated gaseous refrigerant passing to the suction line of the compressor and the separated oil passing to the sump.

2,469,087
DERRICK MOVER
Clark Swartz, Cody, Wyo.
Application August 13, 1946, Serial No. 690,303
2 Claims. (Cl. 280—81)



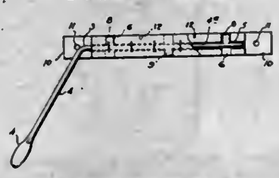
1. A derrick mover which includes a pair of spaced parellel side bars, a pair of spaced parallel end bars, said side and end bars being assembled to form a rectangle, a mobile carriage at each corner of the rectangle, a derrick-foot supporting plate carried by each carriage, means coupling the foot supporting plates to the side and end bars for longitudinal adjustment thereon, a plate mounted intermediate the ends of one of the end bars, a draft tongue connected to the plate and radius rods connecting the plate with the side bars near the opposite end bar whereby pull on the draft tongue will be transmitted to the side bars.

2,469,088
PROCESS OF PRODUCING ALUMINA
Jason F. Thompson, East St. Louis, Ill., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application April 11, 1946, Serial No. 661,345
2 Claims. (Cl. 23—142)

1. The process comprising calcining a mixture of aluminum hydroxide and boric oxide in a kiln at a temperature at which the boric oxide and soda from the aluminum hydroxide volatilize, recovering a mixture of alumina and sodium borate from gas leaving the said kiln, separating sodium borate from the alumina of the last-mentioned mixture, and returning the said alumina to the calcining kiln.

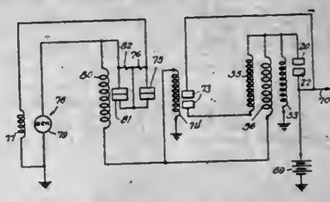
2,469,089
BOBBIN CHECK FOR WEFT REPLENISHING LOOMS
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application January 7, 1948, Serial No. 893
8 Claims. (Cl. 139—251)

5. In a weft replenishing mechanism having bobbin supports inclined downwardly toward a bobbin transfer position, a bobbin check pivotally supported on the mechanism at a point above the transfer position and normally in position to be engaged by a bobbin moving down either support and be moved by said bobbin toward the other support, said check having two surfaces extending over said supports, one surface for each support, each surface cooperating with the corresponding support when the check is moved toward the other support by the bobbin to define a pocket



to receive part of the bobbin and restrict upward motion thereof.

2,469,090
EXTRACTION OF ACONITIC ACID FROM SUGAR CANE
Emil K. Ventre, Baton Rouge, La., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application May 2, 1946, Serial No. 666,782
4 Claims. (Cl. 127—42)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

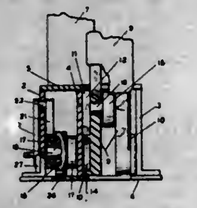


1. A process for the recovery of aconitic acid from sugarcane juice, comprising treating the sugarcane juice with lime and heating to yield a clarified juice having a pH of from 6 to 7, concentrating the juice and crystallizing the sugars therefrom; diluting the molasses with water, heating the diluted molasses, allowing the aconitates to settle, adding a calcium salt, which salt is soluble in the liquid and reacts with the combined aconitic acid to form calcium aconitate, in an amount that is the chemical equivalent of 10 to 40 percent of the aconitic acid radical contained in the supernatant molasses, adding milk of lime in an amount such that, after again raising the temperature to above 60° C. and allowing the aconitate to precipitate, the supernatant molasses has a pH of 6.8 to 7.

2,469,091
VIBRATORY BRIDGE FOR STRINGED MUSICAL INSTRUMENTS
Roy W. Watts, Calgary, Alberta, Canada
Application December 18, 1947, Serial No. 792,559
In Canada October 7, 1947
1 Claim. (Cl. 84—307)

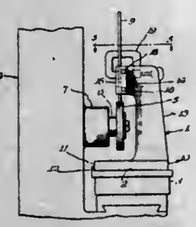
A bridge for stringed musical instruments having an upper and a lower portion held together by the stretched strings of the instrument and with loosely fitting dowel pins, and having a longitudinal groove along the center of each meeting face of the said two portions, and lateral grooves cutting through said longitudinal grooves in each said portion, and also comprising a rotatable bar member fitting loosely in said longitudinal grooves, projecting lugs on both sides of said bar member opposedly directioned upwardly and downwardly, as means for lifting said upper bridge portion on rotation of said bar member against the pressure of the strings, and a bent lever arm extending angularly from one end of said bar member by which its partial rotation is effected when intermittently pressed by hand.

2,469,092
CUTOUT RELAY SYSTEM
George L. Webb, Logansport, Ind., assignor to R-B-M Manufacturing Company, Logansport, Ind., a corporation of Indiana
Original application November 24, 1944, Serial No. 564,942. Divided and this application September 20, 1946, Serial No. 698,351
1 Claim. (Cl. 320—33)



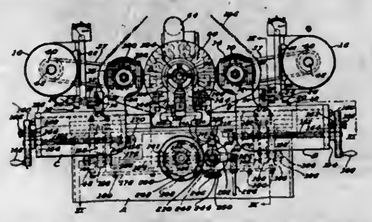
For combination with a battery and a variable speed generator for charging the same, a cutout relay comprising main contacts for connecting the battery to the generator, a shunt coil disposed to be connected for energization across the generator and to close said main contacts when the generator voltage reaches a predetermined value, a series coil disposed to be connected in series circuit relation with the generator to assist said shunt coil in holding said main contacts closed when current flows from the generator to the battery, a differential coil disposed to be connected to be responsive to the difference between the battery and generator voltages and to assist said shunt coil in closing said main contacts when the battery voltage is less than the generator voltage, and voltage regulating means for the generator including a coil disposed to be responsive to the generator voltage, contact means for controlling the voltage of said generator, and normally open auxiliary contacts disposed to be closed thereby when the generator voltage reaches a predetermined value, said auxiliary contacts being connected in series circuit relation with said differential coil for disconnecting it from the battery when the generator is not running to prevent drain on the battery during such time.

2,469,093
STAKE BUNK
William G. White, Aberdeen, Wash.
Application November 17, 1947, Serial No. 786,406
7 Claims. (Cl. 280—145)



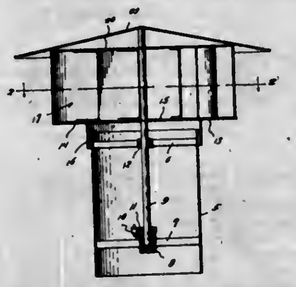
1. A stake bunk comprising an elongated housing having a longitudinally extending central partition separating said housing into two compartments, an opening formed in the top of said housing at each end and into one of said compartments, slots formed in the ends of said compartments from said openings and extending partially along the bottom walls thereof, an upright partition extending inwardly of said

compartments to and adjacent the inner ends of said slots and cooperating with the end and bottom walls containing said slots to define open topped opposed recesses, stakes mounted in the



open ends of said housing and having lateral bosses extending into said recesses to provide floating fulcrums for the stakes, and individual means including a bar for releasably retaining said stakes in upright operative position.

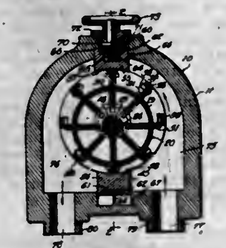
2,469,094
WORK HOLDER FIXTURE
Joseph Wicker, Chicago, Ill.
Application January 9, 1947, Serial No. 720,969
1 Claim. (Cl. 51—217)



A work holder adapted for use with a machine tool having a bed plate, a working element and a gauging shoulder, said holder comprising a substantially rectangularly shaped base member forming a flat downwardly facing support surface, adapted to rest upon the bed plate of the machine tool with the forward edge of the base portion bearing against the gauging shoulder thereof, an upwardly extending relatively thin standard portion disposed centrally between the ends of said base and extending parallel thereto, the bottom of the rear upwardly extending edge of said standard lying in the same plane as the rear edge of the base and sloping inwardly thereof, the front upwardly extending edge of said standard being spaced rearwardly from the forward edge of said base, a face plate portion at the upper end of said standard spaced upwardly from the base and positioned at right angles thereto, said face plate also being offset rearwardly of the forward edge of the base engaging the gauging shoulder and an end gauge element removably mounted on an end of said face plate, whereby the forward edge of the base may abut against the gauging shoulder on the machine and the work may abut against said end gauge element on the face plate for positioning properly with respect to the working element on said machine tool.

2,469,095
APPARATUS FOR REFINISHING TAMPICO ROLLS AND BRUSHES
Oscar A. Widerberg and Walfred A. Wallsten, Worcester, Mass., assignors to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application July 31, 1946, Serial No. 687,304
13 Claims. (Cl. 51—84)

4. Mechanism for producing a predetermined surface on a cylindrical workpiece, which comprises, in combination, a mounting frame, a slide track on the mounting frame extending transversely thereof, a rotatable shaft having an inner end and an outer end, said shaft being adapted to support a workpiece for movement therewith, bearing means for the shaft positioned adjacent to the outer end of the shaft, a bracket bearing stand assembly for the bearing having spaced leg portions straddling the slide track, means for releasably clamping the said leg portions against the slide track, the said bearing means permitting reciprocation of the shaft and workpiece, mechanism for rotating the shaft and workpiece, instrumentalities driven by the said mechanism for oscillating the shaft and workpiece during rotation thereof, working means for surfacing the workpiece, and mechanism for adjusting the working means relative to the workpiece.



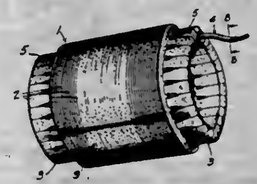
2,469,096
VENTILATOR
William C. Wilson, Pittsburg, Kans.
Application October 16, 1945, Serial No. 622,613
1 Claim. (Cl. 98—75)

A ventilator, comprising an upstanding cylindrical sleeve open at its top and bottom, a lower end thrust bearing disposed centrally within the sleeve and mounted thereon, an upper bearing disposed centrally within the sleeve and mounted thereon, a vertical shaft rotatable within the bearing and projecting above the sleeve, and a rotor arranged above the sleeve and concentric therewith, said rotor comprising upper and lower

circular plates, the upper plate being imperforate and the lower plate having a large central opening in substantial alignment with the sleeve, an annular skirt arranged beneath the lower plate and secured thereto and surrounding the large opening in the lower plate and receiving the upper end of the sleeve therein, a plurality of spaced longitudinally curved blades arranged between the upper and lower plates and extending from the opening in the lower plate to the outer edges of the upper and lower plates and secured to such upper and lower plates, and a cover of considerably greater diameter than the upper and lower plates and arranged above the upper plate in concentric relation thereto and projecting radially beyond the upper plate for a considerable distance, the upper imperforate plate having a central reduced opening, the vertical shaft extending through the reduced opening of the upper plate and having its upper end engaging the lower face of the conical cover at the apex of the conical cover, the upper plate covering the lower face of the conical cover to prevent air being trapped therein.

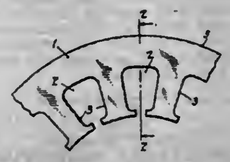
2,469,097
VARIABLE CAPACITY SLIDING VANE PUMP
Herbert A. Wrenn, Lanham, Md.
Application July 11, 1944, Serial No. 544,361
8 Claims. (Cl. 103—120)

1. A pump comprising a casing having a fluid inlet and a fluid outlet, a rotor mounted in said casing, radial vanes carried by said rotor and radially slidable relative thereto, abutment means arranged in said casing between said inlet and said outlet, means for varying the degree of eccentricity of said abutment means relative to said rotor to vary the capacity of the pump, a device having portions forming sections of a cylinder extending across and in operative engagement with the radially outer ends of said vanes and rotatable against said abutments, the space between adjacent pairs of said portions of said device predetermining the maximum width of the pumping pocket between each adjacent pair of vanes, said device being rotatable concentric with said abutment means, said device having end walls provided with spaced circumferentially extending slots, and projections carried by said vanes and engaging in said slots to rotate said device upon rotation of said rotor.



2,469,098
CURTAIN OR DRAPERY FIXTURE
Archie A. Allen, Sturgis, Mich., assignor to Kirsch Company, Sturgis, Mich., a corporation of Michigan
Application January 16, 1946, Serial No. 641,476
7 Claims. (Cl. 211—105.2)

4. In a curtain or drapery fixture, the combination with a tubular rod and a supporting bracket therefor, of a rod supporting arm swingably mounted on said bracket and comprising front and rear members having opposed enlargements adjacent to the swingable connection thereof frictionally engaged within the rod for support-

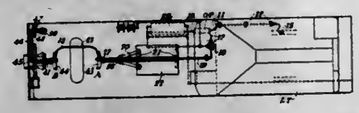


ing the rod for vertical tilting adjustment, and a screw disposed through an opening in the bottom of the rod and having threaded engagement with said arm whereby the rod is supported for vertical tilting adjustment on the arm.

2,469,099
ELECTRIC WINDINGS AND LEADS THEREFOR
Orrin E. Andrus, Altadena, Calif., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application January 21, 1948, Serial No. 3,386
7 Claims. (Cl. 171—252)

3. A stator or the like comprising a stator core, a winding for said core, stranded leads secured to said winding, a silicone resin coating said leads and filling the spaces between the strands of the individual leads, and a non-silicone insulating varnish impregnated in said stator and coating the winding and the silicone covered leads.

2,469,100
LAMINATED MAGNETIC CORE
Orrin E. Andrus, Altadena, Calif., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application August 21, 1947, Serial No. 769,855
4 Claims. (Cl. 175—21)



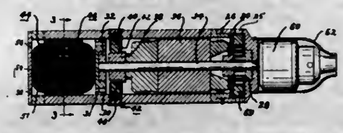
1. A laminated electromagnetic core composed of stamped metal laminations having burrs along the edges of only one face of each lamina, and in which alternate laminations are reversed to present burred faces adjacent each other and smooth faces adjacent each other throughout the core.

2,469,101
METHOD OF PRESERVING RUBBER
Edward S. Blake, Nitro, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application December 22, 1945, Serial No. 637,093
8 Claims. (Cl. 260—810)

5. The method of preserving a rubber which comprises treating a sulfur vulcanizable rubber with a small amount of the condensation product of a dihydroxy substituted benzene having the empirical formula $C_6H_6O_2$ and a dihydric alcohol having the two hydroxy groups linked to carbon atoms separated by a methylene group said product being produced by condensing substantially one molecular proportion of the dihydroxy benzene with at least about two molecular proportions of the dihydroxy alcohol in the presence of an acidic condensation catalyst.

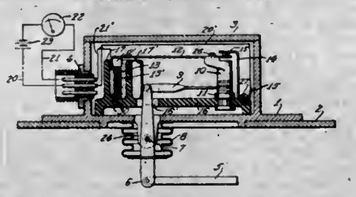
2,469,102
TRAIN CARRIED TRANSMITTING LOOP FOR TRAIN COMMUNICATION SYSTEMS
Edgar W. Breisch, Edgewood, and John I. Seitz, Wilkinsburg, Pa., assignors to The Union Switch and Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application September 27, 1947, Serial No. 776,476
6 Claims. (Cl. 246—8)

1. In railway train communication equipment mounted on a steam locomotive the tender of which has an opening in the top of its tank for taking on water, a transmitting loop mounted on said tender and including a front and a rear conductor fixedly supported in a given horizontal plane above the tender top and aligned on the longitudinal center line of the tender, said front and rear conductors having their near ends spaced approximately an equal distance in front and to the rear respectively of said opening, a U-shaped conductor to join said near ends of said front and rear conductors, two connectors one for each end of said U-shaped conductor, each said connector having a clamp to grip the respective fixed conductor and a rotatable clamp to grip the respective end of the U-shaped conductor to permit the U-shaped conductor to be rotated from said horizontal plane on one side of said tender center line upward and over to said horizontal plane on the other side of the tender center line to avoid interference of said loop with the lowering of a waterspout to said tank opening from either side of the tender, and other conductors to join the far ends of said front and rear conductors.



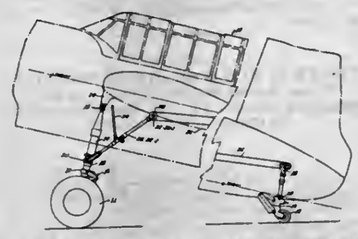
2,469,103
YARN BOBBIN
Lyle A. Carlson, Oakville, Conn.
Application March 21, 1947, Serial No. 736,345
4 Claims. (Cl. 242—96)

1. A bobbin for use with yarn or like material comprising a pair of semi-circular elements, a cross bar joined to said elements at their mid-concave sections and of a length to hold said semi-circular elements so that their adjacent ends are in narrowly spaced relationship but wide enough to allow the material wound on said cross bar to freely pass between said spaced ends, and



said cross bar and semi-circular elements lying in a common plane.

2,469,104
ELECTRIC MOTOR
Keith Conrad and James W. Hackett, Toledo, Ohio
Application April 25, 1947, Serial No. 743,908
14 Claims. (Cl. 172—36)



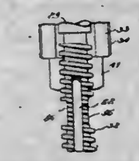
1. In an electric motor, a cylindrical casing comprising a nonmagnetic cylindrical portion having segments of circumferentially spaced magnetic material embedded in said nonmagnetic material, an armature, means for rotatably supporting said armature within said casing, field coil means arranged in axial alignment with said armature, magnetic means for supporting said field coil means and comprising radially extending pole pieces arranged in radial alignment with said segments of circumferentially spaced magnetic material whereby said circumferentially spaced segments of magnetic material constitute field poles surrounding said armature.

2,469,105
WEATHERPROOF TRANSMITTER RESISTOR DEVICE
Clarence A. de Giers, Forest Hills, N. Y., assignor to The Liquidometer Corporation, Long Island City, N. Y., a corporation of Delaware
Application November 21, 1945, Serial No. 629,995
4 Claims. (Cl. 201—56)

1. In a transmitter for a measuring device of the type described for measuring a variable physical magnitude, the combination of a housing, an impedance means having two relatively movable members engaging each other mounted within the housing, the relative position of said members determining the impedance value of said impedance means, a prime mover controlled by said variable physical magnitude and operatively connected with one of said members for controlling the position thereof relative to the other member, and a moisture repellent and electrically insulating compound filling the housing in sufficient amount to cover at least one of the impedance members and the engaging portion of the other impedance member, said compound consisting of a high polymer with a frame work formed by a structure of silicon atoms bound to each other by oxygen atoms and having a semi-fluid consistency causing the compound to maintain the said one impedance member and the engaging portion of the other member completely covered while allowing for electrical contact between the impedance members as the same are moved relatively to each other.

2,469,106
LANDING GEAR FOR AIRCRAFT
Fred N. Dickerman, Nichols, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application January 28, 1944, Serial No. 520,013
11 Claims. (Cl. 244—102)

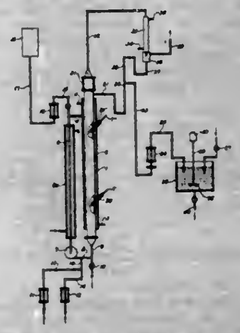
1. An airplane having at least two retractable landing members and means including meshing gears on parallel axes for retracting one of said members longitudinally of said airplane when the other one is retracted.



2,469,107
CHLORINATED WAX-POLYSTYRENE COMPOSITION
Ludwig H. Dimpfl and William E. Elwell, Berkeley, Calif., assignors to California Research Corporation, San Francisco, Calif., a corporation of Delaware
No Drawing. Application December 11, 1945, Serial No. 634,406
4 Claims. (Cl. 260—28.5)

1. A plastic composition comprising a normally solid, hard polystyrene resin and from 35 to 70% by weight of a normally liquid chlorinated paraffin wax based on the total weight of said polystyrene resin and chlorinated wax, said plastic composition being pliable, resilient, dry to touch, reversibly elastic upon extensive deformation in the same general manner as rubber, and being stable against separation of said resin and said chlorinated wax into two phases.

2,469,108
WAX-POLYAMIDE-PINENE RESIN COATING COMPOSITION
Karl W. Fries, Rhinelander, Wis., assignor to Rhinelander Paper Company, Rhinelander, Wis., a corporation of Wisconsin
No Drawing. Application August 6, 1945, Serial No. 609,333
3 Claims. (Cl. 260—23)

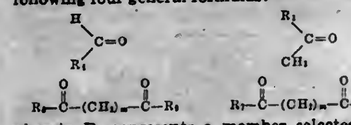


1. A coating composition comprising in solution in an organic solvent a mixture of from 1% to 10% of a polymerized beta-pinene resin having a melting point of around 115° C., from 1% to 10% wax, the balance consisting of a plasticized ethylene diamine polyamide of dimerized and trimerized linoleic and linolenic acids.

2,469,109
NONCORRODIBLE VALVE
Rudolph F. Goecke, Elyria, Ohio, assignor to The Pfaudler Co., Rochester, N. Y., a corporation of New York
Application December 6, 1943, Serial No. 513,071
6 Claims. (Cl. 251—158)

1. In a valve for transmitting corrosive fluids, the combination of a metal valve stem, a metal sleeve surrounding and fixed on said stem to protect the same against corrosion, said sleeve being provided externally with a vitreous protective coating fused thereon and internally with a surface bearing on said stem, a valve head formed at one end of said stem and sleeve and having a surface of corrosion-resisting material, and means at the opposite end of said stem and sleeve for engagement by a valve actuating means.

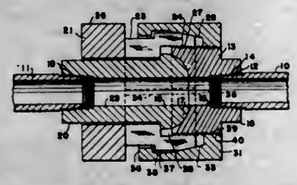
2,469,110
PROCESS FOR PREPARING β-LACTONES
Hugh J. Hagemeyer, Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application April 6, 1946, Serial No. 660,287
13 Claims. (Cl. 260—344)



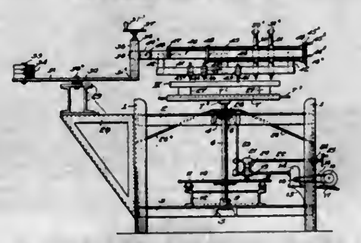
1. A process for preparing a β-lactone comprising reacting, at a temperature of below 50° C. and not less than —50° C. a ketene selected from the ketenes represented by the following general formula:

wherein R and R_1 each represents a member selected from the group consisting of a hydrogen atom, a methyl group, an ethyl group and a

phenyl (C_6H_5—) group, with a carbonyl compound selected from the group represented by the following four general formulas:



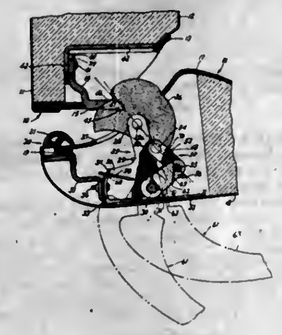
wherein R_2 represents a member selected from the group consisting of a hydrogen atom, an alkyl group of the formula C_nH_{2n+1} wherein n represents a positive integer of from 1 to 4, a benzyl group, a β-phenylethyl group and a phenyl (C_6H_5—) group, R_3 represents a member selected from the group consisting of an alkyl group of the formula C_nH_{2n+1} wherein n represents a positive integer of from 1 to 4, R_5 and R_6 each represents an alkyl group of the formula C_nH_{2n+1} wherein n represents a positive integer of from 1 to 3, R_7 represents an alkyl group selected from the group consisting of methyl and ethyl groups, and R_8 represents a member selected from the group consisting of primary and secondary alkyl groups of the formula C_nH_{2n+1} wherein n represents a positive integer of from 1 to 4, and m represents a positive integer of from 1 to 3, in the presence of a boron compound selected from the group represented by the following general formula:



wherein R_9 represents a member selected from the group consisting of a hydrogen atom, a primary alkyl group of the formula C_nH_{2n+1} wherein n represents a positive integer of from 1 to 4, an acetyl group and a propionyl group.

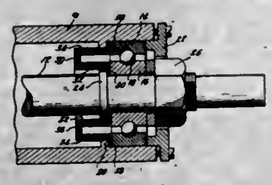
2,469,111
LOCKED COUPLING
Hiram R. Harding, Baltimore, Md., assignor of fifty per cent to Harry E. Karr, Baltimore County, Md., and twenty-five per cent to Logan C. Harding, Hopewell, Va.
Application December 26, 1947, Serial No. 793,917
3 Claims. (Cl. 285—122)

1. A union for the coupling of plural pipes, comprising in combination, a lower barrel of cylindrical form including one end portion enlarged and exteriorly rounded into a quasi-hemispherical form, said lower barrel having a central passage therethrough with the portion opposite to said enlarged end portion provided with means to receive and hold a pipe end portion of predetermined size, an upper barrel exteriorly screw threaded and having a central passage therethrough having a portion provided with means to hold another end portion of pipe and including an arcuate recess in one of its faces conforming with the contour of said first mentioned enlarged end portion of said lower barrel whereby it may receive same and permit a ball-joint-like adjustment therein, a wedge-nut element having an exterior portion formed for tool operation and interiorly provided with a passage to allow the cylindrical portion of the lower barrel to pass therethrough, but to stop same when enlarged end portion contacts said wedge-nut, said element including an extending cylindrical portion of lesser diameter than its tool operation portion from which extends a tapering wedge-like end formation including an internal screwthread, engageable with the screwthreads on the exterior of said upper barrel so as to be adjustable longitudinally thereon, and a cap interiorly screw-threaded at a predetermined portion thereof to screw on to said upper barrel and including a converging recessed interior surface alignable with said wedge-like formation so as to coact therewith and induce a compressive binding thereon as the wedge-nut element is screwed further on said upper barrel to bring the element and cap closer together and thereby make a tighter and leak-proof connection about the ends of the pipes.



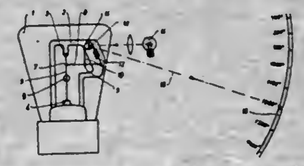
2,469,112
CIRCLE CUTTING BLOWPIPE MACHINE
Wilbur Rutter Helwig, Baltimore, Md.
Application October 16, 1945, Serial No. 622,622
10 Claims. (Cl. 266—23)

1. A burning machine, comprising a frame; a rotatable work table in said frame; a lever pivoted on said frame to one side of the table; a head rotatably mounted adjacent one end of the lever; an arm pivoted on said head and overlying the work table; a centering pin axially adjustably mounted on the arm; and a plurality of acetylene burner heads axially adjustably mounted on the arm; said pivoted lever permitting the arm to swing freely with a knuckle movement across the work when the centering pin is engaged in the work eccentrically of the axis of rotation thereof, said lever having an axial slot adjacent its center; an antifriction bearing upon said frame below the slot; and a bolt transfixing the slot in the lever, the bearing, and the underlying portion of the frame, whereby the lever may be shifted axially on the frame.



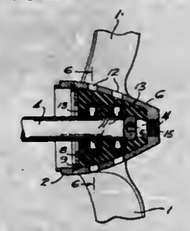
2,469,113
LATCH MECHANISM
Howard W. Hooker, Philadelphia, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application July 3, 1946, Serial No. 681,196
6 Claims. (Cl. 292—332)

6. A door latch, comprising, a shaft, support means at least partially carried by said shaft and mounted with freedom for rotation thereabout, means for adjustably establishing the angular position of said support means with respect to said shaft, a latch bolt pivotally mounted upon said support means and adapted for pivotal movements into and out of latching engagement with a keeper, a toggle movable between extended and retracted positions and adapted to effect such movements of said bolt, said toggle comprising two pivotally connected links the free end of which is adapted to react against said shaft and the free end of the other of which is



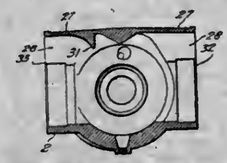
pivotally connected to said bolt at a position radially removed from the pivotal mounting of said bolt upon said support, means on said shaft for moving said toggle to its retracted position to move said bolt out of latching engagement with the keeper, and spring means for moving said toggle into its extended position to move said bolt into latching engagement with the keeper with increasingly amplified force as the bolt advances toward latched position.

2,469,114
SHAFT SEAL
Knute Arnold Holst, Astoria, Long Island, N. Y., assignor to Pitometer Log Corporation, New York, N. Y., a corporation of New York
Application June 2, 1945, Serial No. 597,197
15 Claims. (Cl. 286—11)



1. In a seal between an element and a shaft having limited rotational movement with respect thereto, a flexible member having two circular concentric portions radially spaced from each other and joined at one end by an annular radial portion, the other end of one of said portions being secured to the shaft and the other end of the other portion being secured to the element, whereby said flexible member is subjected to torsion, and a plurality of axially spaced circular elements substantially rigid in radial direction carried by each of said circular portions.

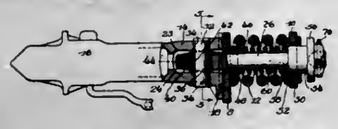
2,469,115
PYROMETER LAMP FOR OPTICAL TEMPERATURE MEASUREMENTS
Adolf Jagersberger, St. Gilgen, Austria
Application February 26, 1948, Serial No. 11,291
In Austria February 4, 1947
Section 1, Public Law 690, August 8, 1946
5 Claims. (Cl. 315—120)



1. In a pyrometer, an incandescent filament adapted to be passed by an electric current, means for laterally straining said filament, and means for indicating the amount said filament yields to said strain, when expanded by the current, said indicating means including a pivotally mounted reflector.

2,469,116
PROPELLER MOUNTING
Elmer C. Kiekhaefer, Cedarburg, Wis.
Application December 31, 1945, Serial No. 638,544
8 Claims. (Cl. 170—177)

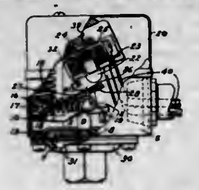
1. In a propeller mounting of the class described, a drive shaft, a propeller having a hub, a resilient insert between the hub and shaft to transmit driving forces therebetween and having a radial hole therein opening outwardly from said shaft, means to secure said insert in the propeller hub, and a transverse pin passing through said shaft and into the radial hole in said insert for securing the insert against axial displacement in either direction on said shaft.



2,469,117
FUEL SUPPLY FOR OPPOSED CYLINDER ENGINES
Elmer C. Kiekhaefer, Cedarburg, Wis.
Application March 9, 1946, Serial No. 653,399
9 Claims. (Cl. 123—56)

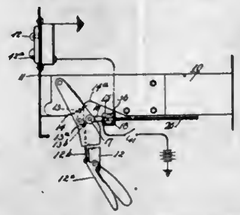
9. In an engine of the class described, a crankcase, a crankshaft operable therein, a pair of

cylinders carried by said crankcase in diametrically opposed relation with their center lines offset longitudinally of the crankshaft to accommodate the corresponding crank throws side-by-side on the shaft, said cylinders having transfer ports communicating between the corresponding cylinders and the crankcase and adapted to be opened and closed by the pistons in the cylinders during operation of the engine, a fuel inlet valve at one end of the crankcase operable by said crankshaft, and a baffle in said crankcase disposed in the path of fuel moving therethrough from said inlet valve to equalize the distribution of fuel to the cylinders, said baffle being disposed near the entrance to the transfer port for the cylinder tending to be most lean in fuel and extending toward the corresponding crank throw to direct more fuel into said cylinder and extending close to the path of the crank to provide added lubrication for the crank by dripping of fuel from the baffle as the crank passes the same.



2,469,118
CENTERING MEANS FOR RAILWAY DRAFT DEVICES
Edmund P. Kinne and Frank H. Kayler, Alliance, Ohio, assignors to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application August 12, 1943, Serial No. 498,292
31 Claims. (Cl. 213—19)

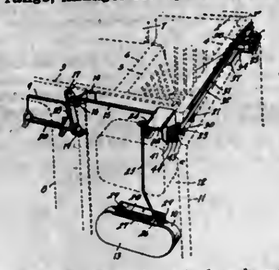
1. In a draft arrangement, front and rear followers designed to be confined between front and rear draft lugs of an associated car body, main resilient means compressed between said followers, a coupler seated against said front follower, a draft bar pivotally connected to said coupler and extending through said followers, securing means fixed on the end of said draft bar and having a portion extending through said rear follower, and auxiliary resilient means compressed between said portion and said front follower and acting to urge said coupler into engagement therewith, said coupler having a butt with a flat face merging at opposite vertical edges thereof into arcuate shoulders, and said front follower having a face complementary in form for seating of said butt and affording a fulcrum against which said shoulders may pivot upon lateral angling of said coupler.



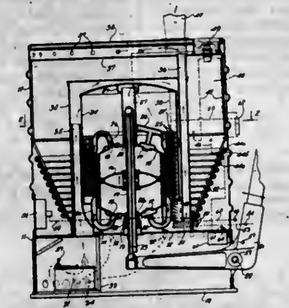
2,469,119
TOGGLE ACTUATED SWITCH
Nobel H. Koertge, Glen Ellyn, Ill., assignor to Furnas Electric Company, Batavia, Ill., a corporation of Illinois
Application December 20, 1946, Serial No. 717,522
6 Claims. (Cl. 200—83)

1. An electric switch comprising, a contact support, a fixed contact mounted upon said support, a movable contact having a carrier bar slidably cooperable with said support to guide said contacts for coaction with each other, resilient means for constantly urging said movable contact toward said fixed contact, a toggle having a rigid impact member for opening and closing said contacts with a snap action, a leaf spring interposed between said impact member and said bar for preventing double clicking of said contacts, and a snubber with which said leaf spring is gradually

increasingly engageable and cooperable to prevent destructive vibration of the latter.



2,469,120
BRAKE LEVER OPERATED SWITCH
Roy A. Kropp, River Forest, Ill., assignor to Kropp Forge Company, Cicero, Ill., a corporation of Illinois
Application May 7, 1945, Serial No. 592,425
4 Claims. (Cl. 200—59)

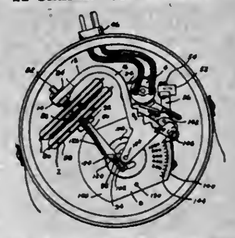


1. In combination in an electrical circuit controlling device for an emergency brake signal, a clevis member adapted to be connected to a brake lever, said clevis member having an apertured closed end portion, an elongated member extending reciprocably through said apertured end portion and adapted to be attached to the emergency brakes of a vehicle, a sliding block reciprocably movable within the clevis and secured to the end of said elongated member for movement therewith, a boss on one side of said clevis, said boss being hollow and having an aperture through the side of the clevis communicating therewith, a plunger reciprocably guided in said boss and having a tip projecting through the aperture in the side of the clevis, a longitudinal camway in the periphery of said sliding block, said plunger tip extending into said camway for maximum projection through said aperture through which it projects in one reciprocal position of the sliding block and arranged to be cammed out of the camway by movement of the sliding block into another reciprocal position, and a switch assembly carried by said boss and including normally separable electrical switch contacts arranged to be moved into closed position upon movement of said plunger away from said sliding block by said camway as an incident to movement of the block with said elongated member into said other position.

2,469,121
RANGE DRAFT CONTROL
Robert C. Lang, Kalamazoo, Mich., assignor to Kalamazoo Stove & Furnace Co., Kalamazoo, Mich.
Application June 14, 1946, Serial No. 676,788
3 Claims. (Cl. 126—1)

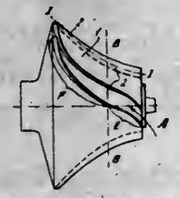
2. The combination with a solid fuel burning range having an end frame member with a top member and end closure panel supported thereon, of a down turned flange on said top member terminating in substantial flush vertically spaced relationship with said end panel, an air inlet damper positioned on the rear of said range, a smoke by-pass damper positioned on the rear of said range, linkages for operating said dampers including a pair of control rods positioned along said end frame member and between said top member and end panel, said control rods having fingers extending outwardly of said range between said flange and said end panel and near the forward end thereof, and control knobs positioned on the ends of said fingers.

2,469,122
VAPOR COMPRESSION TYPE STILL
Allen Latham, Jr., Jamaica Plain, Mass., assignor to Arthur D. Little, Inc., Cambridge, Mass., a corporation of Massachusetts
Application April 3, 1945, Serial No. 586,357
15 Claims. (Cl. 202—182)



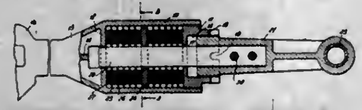
1. Distillation apparatus of the vapor compression type comprising a mechanical compressor adapted to compress vapor by mechanical compression thereof, a vaporization chamber which is disposed about said compressor and which is arranged to confine therewithin for transmission to fluid within said vaporization chamber sensible heat of the compressor generated during operation thereof, a heat exchanger within said vaporization chamber, means for directing vapor from said vaporization chamber to said compressor for compression therein, means for directing compressed vapor from said compressor to said heat exchanger in out-of-contact heat exchange relation with said solution in said vaporization chamber, means for introducing solution to be distilled into said vaporization chamber, means for withdrawing concentrated solution from said vaporization chamber, and means for withdrawing distillate from said heat exchanger, said apparatus being adapted to maintain a substantially higher pressure within said heat exchanger than the pressure within said vaporization chamber upon actuation of said compressor to compress therein vapor directed thereto from said vaporization chamber and directed therefrom to said heat exchanger.

2,469,123
APPARATUS FOR PROGRESSIVELY ENAMELING CONTINUOUS METAL SHEETING
Wesley G. Martin, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application January 20, 1945, Serial No. 573,759
2 Claims. (Cl. 91—13)



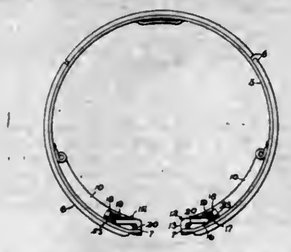
1. In apparatus for the progressive enameling of a continuous metal sheet, a pair of coil supports spaced apart a substantial distance, cleaning apparatus, a spray booth, a dryer, a firing furnace and quenching equipment disposed in the order named between said coil support, drive rolls disposed in conjunction with said cleaning apparatus and the enamel applying, fusing and quenching equipment to drive the sheet through the same and clean and coat the sheet with enamel, rolls having a resilient covering and disposed between the dryer and firing furnace to steady said sheet in its forward moving path, and asbestos covered rolls provided between the firing furnace and the coil support on which the enameled sheet is wound to additionally steady the sheet in its course to said last named coil support.

2,469,124
PRESSURE OPERATED SWITCH
Ira E. McCabe, Chicago, Ill.
Application December 2, 1944, Serial No. 566,340
11 Claims. (Cl. 200—83)



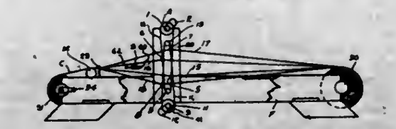
1. A pressure recording device comprising a switch adapted to be included in an electrical circuit, switch actuating means, pressure responsive means, means for operating said switch actuating means, said means including a clutch for intermittently actuating said actuating means upon expansion of said pressure responsive means, said clutch comprising clutch elements having a holding action on the operating means when the clutch elements are in engagement to prevent return of the operating means to a prior pressure recorded position, and said operating means having a lost motion connection between said pressure responsive means and said actuating means for permitting said pressure responsive means to move through any of the prior pressure recorded positions.

2,469,125
CENTRIFUGAL COMPRESSOR FOR HIGH STAGE PRESSURES
Christian Meisser, Davos-Dorf, Switzerland, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland
Application September 26, 1944, Serial No. 555,790
In Switzerland December 11, 1943
8 Claims. (Cl. 230—134)



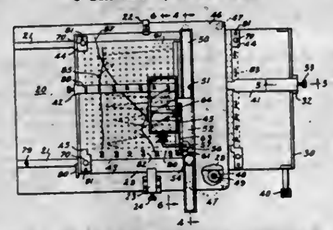
1. A centrifugal compressor suitable for high peripheral speeds, comprising a rotor, to be driven at a peripheral speed not less than 300 meters per second, with a plurality of blades extending from the inlet part on a small diameter to the outlet part on a greater diameter, the latter part being spaced axially from the former, the blades being bent backwards throughout their length and having at least two zones, one, an inlet zone in which the angle of inclination of the backwardly bent blade surfaces with respect to the peripheral direction increases from the relatively small angle required for freedom from shock at the inlet at normal load to the maximum value attained from inlet to outlet, and the other, an outlet zone in which the angle of inclination of the backwardly bent blade surfaces with respect to the peripheral direction decreases from the maximum value attained from inlet to outlet to an angle at the outlet whose cosine is greater than the ratio of the relative velocity to twice the peripheral velocity.

2,469,126
SHOCK ABSORBING STRUCTURE FOR RAILWAY DRAFT GEARS
George R. Munro, Massapequa, and Walter C. Dilg, Hewlett, N. Y., assignors to Waugh Equipment Company, New York, N. Y., a corporation of Maine
Application January 16, 1948, Serial No. 2,584
5 Claims. (Cl. 213—46)



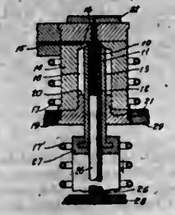
3. A draft gear for use on railway rolling stock, which comprises a housing having a closed end with an axial opening, a shank attached to the housing at its closed end and adapted to be connected to the coupler of the vehicle, a removable plug in the other end of the housing, the plug having an axial recess opening outwardly with an axial passage of reduced diameter through the bottom of the recess, a rod extending through the opening, the housing, and the passage and recess of the plug, a bar having a recess at one end, the end of the rod projecting beyond the plug entering the recess in the bar and being connected to the bar, the recessed end of the bar entering the recess in the plug and the other end of the bar being adapted to be connected to a part of the vehicle structure, an abutment on the rod within the housing, and a pair of spring units encircling the rod within the housing and lying on oppostie sides of and in contact with the abutment, one of the units engaging the closed end of the housing and the other the inner side of the plug.

2,469,127
FRICTION ELEMENT FOR BRAKES
John George Oetzel, Beloit, Wis., assignor to Warner Electric Brake Manufacturing Company, South Beloit, Ill., a corporation of Illinois
Application October 12, 1944, Serial No. 558,296
8 Claims. (Cl. 188—250)



1. A friction brake comprising an arcuate member, a flat rib secured to and extending along one end of said member on the concave side thereof, a cross plate having one end portion lying adjacent the end of said member and said rib, the other end portion being bent substantially at right angles to said first portion and divided into two legs straddling said rib and converging toward said member in a direction away from said first end portion, the ends of said legs being bent away from the member, and welds formed along opposite sides of said rib and the inner and outer margins of said legs to secure the latter to the rib and said member respectively.

2,469,128
HAND LOOM
Jeremiah A. Pecott, deceased, late of Lawrence, Mass., by Bertha A. Pecott, administratrix, Lawrence, Mass.
Application May 16, 1946, Serial No. 670,234
4 Claims. (Cl. 139—33)



1. A hand loom having a frame provided with two uprights, a top heddle driving roller rotatably mounted in said uprights and provided with a turning handle; a top heddle driven roller rotatably mounted in said upright below the top driving roller; top heddles passing around both top heddle rollers, each heddle being attached to the top heddle driving roller and having two warp thread eyes; a bottom heddle driving roller rotatably mounted between the uprights, positioned below the top heddle driven roller and including a turning handle; a bottom heddle driven roller rotatably mounted between the uprights and positioned above the top heddle driven roller; bottom heddles passing around both bottom heddle rollers each heddle being attached to the bottom heddle driving roller and having two warp thread eyes; a warp beam positioned on one side of the uprights; and a cloth beam positioned on the other side of the uprights, whereby certain warp threads from the warp beam can pass through certain eyes and other warp threads can pass through other eyes to form various sheds for the passage of a shuttle or shuttles.

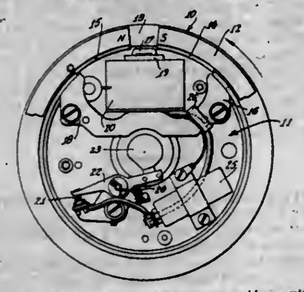
2,469,129
SPECTROPHOTOMETRIC CURVE READING APPARATUS
Genevieve Becker Reimann, Baltimore, Md.
Application November 5, 1945, Serial No. 626,765
6 Claims. (Cl. 88—39)

1. An apparatus of the class described comprising in combination a reciprocating carriage including a plate arranged to support and hold a spectrophotometric curve sheet in readable position thereon and with clamps mounted on its sides, a scale including markings for determining the ordinate values of the curve on said sheet mounted on said carriage and movable across same to align with various points on said curve, another scale on the carriage for determining the values of abscissae of said curve, a table for supporting said carriage arranged to provide a path for the latter to reciprocate on, means for supporting the table and enabling same to be tilted to various angles and retained in such positions, a bridge attached to said table and permanently located in a predetermined position thereover, a magnifying lens movable across the bridge and alignable with the points on said curve for the examination and evaluation thereof, and means for adjusting the lens on said bridge.

2,469,130
METHOD OF AND APPARATUS FOR MOLDING
Isaac P. Rodman, Jr., West Orange, N. J., assignor to Celluplastic Corporation, Newark, N. J., a corporation of New Jersey
Application October 17, 1945, Serial No. 622,710
10 Claims. (Cl. 18—5)

6. The method of forming hollow articles from plastic material which comprises providing a closed mold having a cavity therein of an internal configuration corresponding to the shape of the article to be molded, providing in the said mold cavity means defining a closed, substantially cylindrical die space, introducing fluid plastic material to be molded into the cylindrical die space, until the space is filled with the material, allowing the plastic material to become self-sustaining in the said space while maintaining the said space constant in its dimensions, thereby forming a substantially cylindrical, but plastic starting blank, removing the cylindrical die space means die parts from around the starting blank while maintaining the starting blank in initial position, expanding the blank laterally while restraining the blank longitudinally by introducing a fluid medium into the blank until the expanded blank fills the mold cavity, restraining a portion of the cylindrical blank at an end thereof while expanding the remaining portion of the blank into engagement with the sides of the mold cavity, and after expansion of the article in the mold cavity, effecting release of the resulting expanded article from the mold cavity by opening the bottom portion of the mold while continuing introduction of the fluid medium into the expanded article under sufficient pressure to effect ejection of the expanded article from the mold cavity.

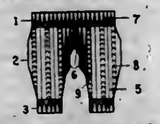
2,469,131
INFLATABLE DOOR SEALING SYSTEM
Walter G. Ross, Berkley, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application May 28, 1947, Serial No. 751,155
15 Claims. (Cl. 296—44)



15. The combination with a closure member and an associated member defining a closure opening, of an expansible and collapsible sealing element adapted to be positioned along the joint between said members when said closure member has been moved to closed position, means providing a source of pressure fluid for expanding said sealing element, and conduit means connecting said pressure fluid source with said sealing element comprising engageable, cooperating valve pieces mounted on each of said members and arranged to automatically control expansion of said sealing element in accordance with the position of said closure member relative to said opening.

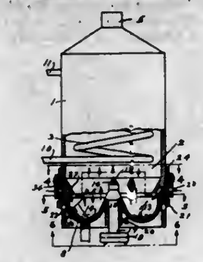
2,469,132
MANUFACTURE OF SULFUR COMPOUNDS
Walter A. Schulze and Willie W. Crouch, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application August 4, 1944, Serial No. 548,146
8 Claims. (Cl. 260—79)

8. A novel composition of matter which comprises an unsaturated organic sulfur-containing product of from 1 to 5 per cent sulfur and of molecular weight of 500 to 3,000; said composition being further characterized as the product derived from the interaction in an aqueous emulsion of conjugated butadiene, an unsaturated organic comonomer polymerizable therewith in



aqueous emulsion selected from the group consisting of styrene, acrylonitrile, and methyl methacrylate and an aliphatic mercaptan having from 10 to 16 carbon atoms per molecule and containing a single SH group in addition to carbon and hydrogen, said butadiene making up from 50 to 95 per cent of the combined weight of said butadiene and comonomer, and said mercaptan being present in an amount ranging from 10 to 50 weight per cent of said butadiene and comonomer.

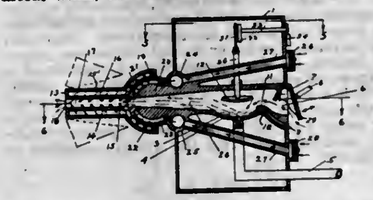
2,469,133
MAGNETOELECTRIC MACHINE
Lloyd H. Scott, Garden City, N. Y., assignor, by mesne assignments, to Jack & Heints Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application November 1, 1945, Serial No. 626,122
7 Claims. (Cl. 171—209)



1. In a magneto for use in connection with internal combustion engine ignition systems, or the like, having spark plugs, or the like, with spark gaps, said magneto having a magnetic circuit including a magnet and pole shoe structure and a relatively rotatable magnetic core structure having spaced arms intermittently bridged thereby, said core structure including primary and secondary windings on one of said arms, a circuit breaker for said primary winding for releasing a spark from the secondary winding across said gap, a member of conducting material of predetermined proportions mounted on said core and encircling a predetermined portion of said magnetic circuit for predeterminedly modifying the rate of change of the flux traversing the same to an extent sufficient for precluding premature sparking across said gap.

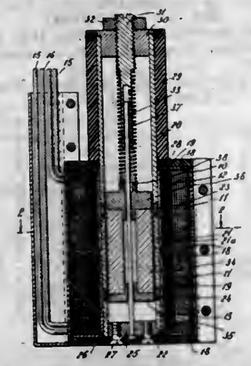
2,469,134
MANUFACTURE OF KNITTED WARE TRUE TO SHAPE
Fritz Seiler, Auvernier, Switzerland, assignor to Textile Researches Limited, Basel, Switzerland
Application June 25, 1946, Serial No. 679,140
In Switzerland July 2, 1945
1 Claim. (Cl. 66—177)

Method for producing finished shape knitted garments such as children's drawers or the like, provided with ornamental effects and reinforcements, comprising automatically knitting a left and a right half of the garment by producing rows of loops extending the entire length of the knitted piece and also shorter rows of loops arranged between other rows symmetrically with respect to the axis of the garment and forming areas of tapering shape and serving to effect the final correct shaping desired, and so as to produce patterns extending longitudinally of the garment.



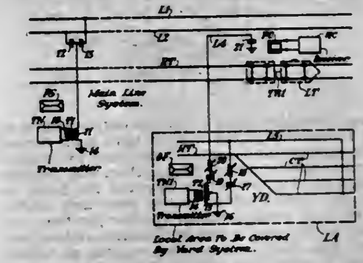
2,469,135
TRAY TYPE FUEL OIL BURNER
John T. Stone, Baltimore, Md.
Application November 18, 1944, Serial No. 564,149
2 Claims. (Cl. 158—91)

1. A liquid fuel burner unit of the class described comprising in combination, a fuel well structure for burning the fuel therein, including an inverted arcuate section of circular form open at the top, the central portion of the structure including a hollow stem having a conical apex and perforations through said apex to permit air for combustion purposes to flow therethrough from an extraneous source into the central portion of the structure above the flames induced by burning said fuel in said section portion, said structure including an orifice for the supply of fuel to the bottom of said section, a casing about the structure having openings for the supply of air to the area above the structure and along the periphery thereof, an angular baffle plate mounted on said casing and disposed peripherally above said structure and said openings and spaced closely thereto so as to divert the incoming air down along the wall of the structure to the fuel contained therein, the flow of flames induced by the burning of said fuel and the air together being directed by the air passing under said plate towards the central area of the structure and away from the peripheral portions thereof and into the path of the air flowing out of the apex portion of said stem, means on said casing for controlling the size of said openings and the flow of air therethrough from the outside of said unit, and means for vertically adjusting the position of the stem in the structure, the annular walls of said fuel well structure being upwardly divergent so as to widen the area of the fuel exposed for burning purposes as to increase the amount of flames generated in the combustion of the fuel and air as more fuel is raised in depth therein.



2,469,136
GUN TYPE BURNER
John T. Stone, Baltimore, Md.
Application November 18, 1944, Serial No. 564,150
3 Claims. (Cl. 158—91)

1. A burner of the class described comprising in combination a casing, a burner body mounted in said casing, said burner body having a tapered combustion chamber therein and a dished portion forming a fuel pan, means for supplying oil to said fuel pan, duct means for supplying primary air to said chamber, duct means for supplying secondary air to the burner, a gun tube pivotally attached to said burner body, said gun tube having concentric inner and outer cylindrical walls, the inner wall providing a channel

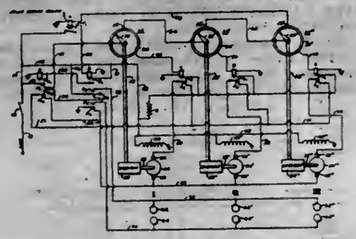


for passage of the flames from the burner body and the outer wall providing an outer chamber, concentric with the channel and aligned with said secondary air duct means, and the inner wall having openings therethrough to provide passages for the secondary air in the outer chamber to enter the inner passage and mix with the flames passing therethrough to complete the combustion.

2,469,137
VIBRATION INDICATOR
Eible C. Strong, Sunnyside, N. Y., assignor to Waugh Equipment Company, New York, N. Y., a corporation of Maine
Application October 20, 1945, Serial No. 623,595
7 Claims. (Cl. 171—119)

1. In a vibration indicator, the combination of a pair of aligned coaxial secondary windings one above the other, exciting means therefor adapted to be supplied with alternating current, the windings being connected so that their outputs are opposed, ferrous means partially enclosing the windings to provide magnetic paths for the respective windings, each path having a gap lying substantially half way between the ends of its winding and of substantially less length than the winding, an armature of ferrous material movable lengthwise of the windings and of a length substantially equal to the distance between the midpoints of the gaps along the axis of the windings, a tubular guide extending through the windings and terminating above the top of the upper winding, the armature lying within the guide, a member mounted in the guide above the upper winding and adjustable axially of the guide, and a spring within the guide attached at its upper end to the member, the armature being suspended from the lower end of the spring and normally lying with its ends opposite the mid-points of the windings.

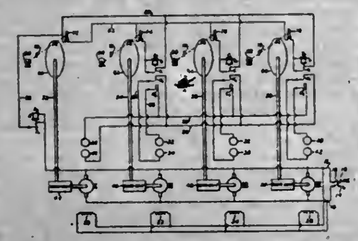
2,469,138
TRANSMITTING APPARATUS FOR INDUCTIVE CARRIER RAILWAY TRAIN COMMUNICATION SYSTEMS
Burrows C. Van Glider, North Wales, Pa., assignor to The Union Switch and Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application July 30, 1947, Serial No. 764,608
5 Claims. (Cl. 246—8)



1. In combination, a stretch of main track of a railway, a train communication system for said railway using a longitudinal circuit of a line wire extending along said main track as an element of a transmitting channel having inductive relation to circuit elements mounted on a vehicle of a train operating over said main track, a local area along said stretch and having a track which a train vehicle may occupy, train communication means including a transmitter and a line wire along said local area track for inductive relation with circuit elements mounted on a train vehicle occupying said local area track, said transmitter operable to supply communication current having a given carrier frequency and connected to said line wire of said local area, an auxiliary circuit including an auxiliary line conductor disposed adjacent a given length of said longitudinal circuit and connected to said transmitter, and impedance elements interposed in said auxiliary circuit to determine the magnitude and phase angle of said communication current supplied to the auxiliary circuit for the energy inductively transferred to said longitudinal circuit from said auxiliary line conductor to substantially balance out the energy inductively transferred inadvertently to said longitudinal circuit from said line wire along said local area track.

2,469,139
ELECTRIC MOTOR CONTROL SYSTEM
Eric C. Wahlberg, Stamford, Conn., assignor to Electrolux Corporation, Old Greenwich, Conn., a corporation of Delaware
Application April 28, 1945, Serial No. 590,820
25 Claims. (Cl. 318—437)

22. In an electric system, a plurality of electric motors, a gear reduction unit driven by each motor, each unit having an output shaft, one of said motors driving a substantially greater load



than the remainder of said motors, a source of electric current, switching means for controlling said current, automatic means responsive to actuation of said switching means for supplying current at a reduced voltage to said remainder of the motors to cause the latter to run independently of each other and at reduced speed, means responsive to the turning of the output shaft of each gear unit driven by said remainder of the motors to a predetermined angular position for interrupting the supply of current to the respective motor and for dynamically braking said respective motor,

means operative when all of the output shafts of said remainder of the motors have been turned to the predetermined angular positions for supplying current at a voltage higher than said reduced voltage to said one motor to cause the latter to turn the output shaft of the gear unit driven thereby to a predetermined angular position, and means responsive to the positioning of the last-mentioned shaft for supplying current at normal voltage to all of said motors to thereby start said remainder of the motors and to continue the operation of said one motor.

2,469,140
SYNCHRONIZING SYSTEM FOR GEARED MOTORS

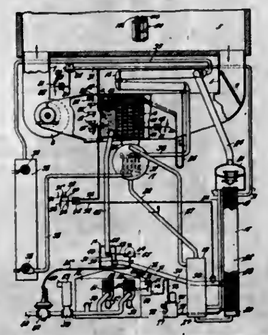
Eric C. Wahlberg, Stamford, Conn., assignor to Electrolux Corporation, Old Greenwich, Conn., a corporation of Delaware
Application July 2, 1945, Serial No. 602,785
6 Claims. (Cl. 318—85)

6. In an electrical system, a plurality of electric motors, a gear reduction unit driven by each motor, each unit having an output shaft, a source of electric current, means for connecting said motors to said source to cause the motors to start substantially simultaneously and to come up to substantially full speed independently of each other, means for synchronizing all of the motors with respect to each other during their rotation at substantially full speed and without stopping any of them, and means for preventing the synchronizing of any of said motors before they have attained substantially full speed.

2,469,141
POLYSULFIDE POLYMER AND PROCESS OF MAKING

Robert O. Alexander, Trenton, N. J., assignor to Thiokol Corporation, Trenton, N. J., a corporation of Delaware
No Drawing. Application November 13, 1946, Serial No. 709,415
8 Claims. (Cl. 260—13)

1. A composition of matter having a continuous phase and a discontinuous phase the discontinuous phase comprising a non-colloidal dispersion of a polysulfide polymer in said continuous phase, the continuous phase comprising a solution of a resinous substance in a water insoluble liquid which is a solvent for the resin and a non-solvent for the polysulfide polymer, said polysulfide polymer being a synthetic polymer comprising recurring units selected from the group consisting of S_xRS_x and



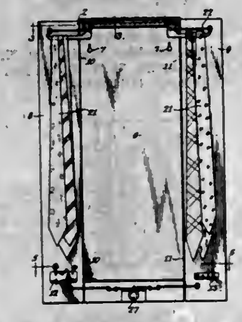
$$\begin{matrix} S_xR' & S_x \\ & S_x \\ S_xR' & S_x \end{matrix}$$

where S is a sulfur atom, x is a numeral varying from 1 to 3, R has a valence of two and R' has a valence of more than two, R and R' being radicals selected from the group consisting of

representing, respectively, adjacent carbon atoms and carbon atoms joined to and separated by intervening linkage, the ratio by weight of said polymer to the total weight of polymer, resin and water insoluble liquid varying from about 10 to about 60 per cent and the ratio of resin to polymer by weight varying from about 10 to about 100 per cent.

2,469,142
AIR CONDITIONING

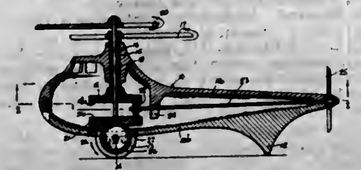
Sven W. E. Andersson, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application December 22, 1945, Serial No. 636,977
12 Claims. (Cl. 257—3)



12. In an air conditioning system comprising heat exchange means, a blower for flowing air to be conditioned over said heat exchange means, a source of heat, selective control means for adjusting the system for operation by heat from said source to supply either a heating medium or a cooling medium to said heat exchange means, apparatus for removing heat from the system when the latter is adjusted for supplying cooling medium to the heat exchange means, and a

thermostatic device for delaying operation of both the blower and said heat removing apparatus, respectively, under supervision of said selective control means.

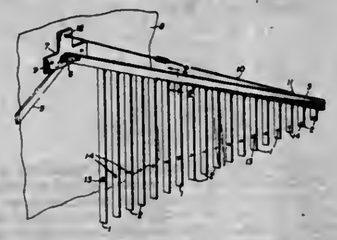
2,469,143
APPAREL-HANGER CABINET



Michael Ascheri, Lorain, Ohio
Application September 29, 1945, Serial No. 619,287
5 Claims. (Cl. 312—174)

4. In a cabinet having a mirrored front wall and a rear wall spaced therefrom, a pair of side doors hinged to said rear wall, converging tracks mounted within said cabinet, a pair of carriages each comprising a hanger movable along one of said tracks, connections between said carriages and doors respectively and mechanism for actuating said doors and hangers in unison.

2,469,144
TOY AIRPLANE



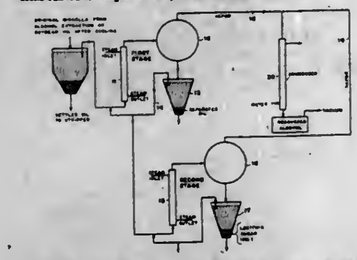
Edmund W. Baggott, Brooklyn, N. Y., assignor to Ideal Novelty & Toy Co., Hollis, N. Y., a corporation of New York
Application November 13, 1946, Serial No. 709,476
1 Claim. (Cl. 46—75)

A toy airplane which has a hollow body which is provided with an upstanding bearing, a hollow upstanding shaft located in said bearing and extending above said body, an inner upstanding shaft extending through and above said hollow shaft, said shafts having respective superposed propellers above said body, a hollow-shaft rotor fixed to said hollow shaft below said bearing, said hollow-shaft rotor having a bore, said inner shaft extending through and below said bore, an inner-shaft rotor fixed to said inner shaft below said hollow-shaft rotor, said body having a wheel-shaft turnably connected thereto at its bottom, wheels fixed to said wheel shaft, said wheel-shaft having a wheel-shaft driving rotor which extends upwardly into said hollow body, said inner-shaft rotor abutting said wheel-shaft rotor, a longitudinal propeller shaft which extends longitudinally through said body and which has a propeller fixed thereto externally of said body, an intermediate rotor fixed to said longitudinal propeller shaft and abutting the underside of said hollow-shaft rotor and the upper side of said inner-shaft rotor, said intermediate rotor being spaced from the common axis of said hollow shaft and said inner shaft, all said rotors being located in said hollow body, said wheel-shaft rotor being a support for said other rotors.

2,469,145
JUMP MEASURING DEVICE

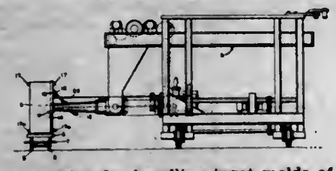
Doyle D. Baliff, East Gary, Ind.
Application August 19, 1948, Serial No. 45,106
4 Claims. (Cl. 272—59)

4. A jump measuring device for attachment to an upright support and use to indicate the height at which a person can jump upwardly off a floor comprising a series of foot and inch indicating flat bars graduated in length throughout the series, means to swingably suspend said bars by corresponding ends thereof in edge to edge spaced apart relation with lower ends stepped upwardly from the longest bar for striking by the hand of persons jumping to different heights from the floor to swing the bars sidewise and thus identify the bars struck, the longest bar and intermediate bars of the series being foot indicating bars designated on one side to indicate in numbers of feet different heights from the floor in consecutively numbered ascending order beginning with the longest bar, the other bars being inch indicating bars designated on one side thereof to indicate in numbers multiples of inches in a foot arranged in ascending order from the foot indicating bars for supplementing in inches the foot indications on said foot indicating bars.



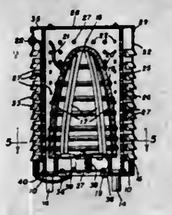
2,469,146
STEEL HELMET

Raleigh H. Barnes, deceased, late of Cleveland Heights, Ohio, by Miriam M. Barnes, executrix, Cleveland Heights, Ohio, and Harold J. Elmendorf, Worcester, Mass., assignors to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Original application December 18, 1943, Serial No. 514,844. Divided and this application December 19, 1946, Serial No. 717,134
7 Claims. (Cl. 2—3)



3. In a steel helmet, a crown and a brim, said crown being of greater hardness than said brim.

2,469,147
PROCESS FOR THE RECOVERY OF OIL AND BY-PRODUCTS FROM ALCOHOLIC SOLUTIONS OF OLEAGINOUS MATERIALS
Arthur C. Beckel, Peoria, and Paul A. Belter, Pekin, Ill., assignors to the United States of America as represented by the Secretary of Agriculture
Application April 18, 1945, Serial No. 589,006
11 Claims. (Cl. 260—412.4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



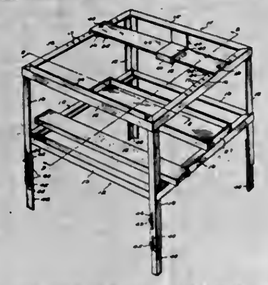
1. In a process of extracting vegetable oils and lecithin from soybean seed material containing them, wherein the soybean seed material is extracted with a hot alcoholic solvent, and the alcoholic extract cooled to separate part of the vegetable oil, leaving an extract containing residual oil, in combination therewith, the improvement comprising a multi-stage continuous process of recovering the alcohol and removing the residual oil and lecithin from the extract, the first stage of said continuous process comprising continuously vaporizing the alcohol to concentrate the extract to cause the continuous separation of vegetable oil while hot, removing the oil from the concentrated alcoholic extract while hot, recycling part of the latter extract to the first stage vaporizing step, the second stage of the said continuous process comprising withdrawing part of the said concentrated alcoholic extract from which the oil was removed as aforesaid and subjecting it to further concentration by evaporation of alcohol to cause the lecithin to separate, the first stage alcohol evaporation and oil separation being controlled to prevent concentration to the point where separation of lecithin would take place in the first stage, the separation of the vegetable oil in the first stage from the concentrated extract being carried out at substantially the temperature of the first stage alcohol evaporation step, the latter evaporation step being at subatmospheric pressure.

2,469,148
INGOT MOLD CLEANER
George H. Bivens, Johnstown, Pa.
Application April 29, 1946, Serial No. 665,651
3 Claims. (Cl. 214—1)

1. Apparatus for handling ingot molds of the type having lugs arranged in pairs on opposite sides thereof, comprising a tool embodying a pair of members slidable relative to one another and respectively having one end thereof adapted to engage a lug of the mold, one of said tool members being positively secured to the free end of the charging bar of a furnace charging machine, and said members being complementarily equipped to be engaged by the connecting pin slidably carried by the charging bar to be secured thereby at the desired position of adjustment relative to one another.

2,469,149
SPACE HEATER
Horace L. Blackwelder, Salisbury, N. C.
Application February 20, 1947, Serial No. 729,872
3 Claims. (Cl. 219—39)

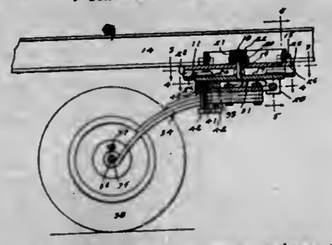
1. A space heater comprising a ring-shaped trough adapted to contain water, a perforated porous tubular humidifier rising from the trough with the lower end thereof immersed in water contained in said trough, a heating unit supported on the trough near the humidifier whereby air heated by the heating unit and passing through the perforations in the humidifier will be moistened, and a motor driven fan supported by the trough near the lower end of the humidifier to produce a flow of air axially of the humidifier and around the heating unit.



2,469,150
WIRE COATING COMPOSITIONS
Willis E. Boak, Burton, Ohio, assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
No Drawing. Application September 4, 1947, Serial No. 772,205
3 Claims. (Cl. 106—228)

1. A coating composition adapted to produce a rust resisting coating on an iron wire, which consists of the following constituents in substantially the proportions indicated:

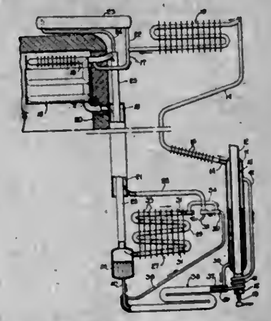
Soft red iron oxide	lbs.	140
Fibrous magnesium silicate	lbs.	38
Litharge	lbs.	19¼
Aluminum stearate	lbs.	1 to 4
Congo-linseed oil varnish of 15 gallon oil length	gallons	80
Varnish Maker's and Painter's Naphtha	do	12½



2,469,151
AUTOMOBILE DOOR REPAIR BENCH
Richard Bremer, Muskegon, Mich.
Application September 18, 1946, Serial No. 697,757
9 Claims. (Cl. 153—32)

1. A repair bench of the class described comprising a frame having vertical legs at the corners, an upper frame and a lower frame connected to said legs in spaced parallel relation at the top and intermediate portions of the height of the legs, a cross-bar adjustably secured to the side cross-bars of the upper frame, a bracket slidably disposed on said cross-bar and having an upstanding portion, means for securing the bracket on the cross bar to resist pressure exerted

against the face of the upstanding portion, a flange at the front of the top frame, means disposed on said flange for supporting a door between the flange and bracket means for supporting a jack on the lower frame including a bar slidable along the lower frame at the sides thereof.



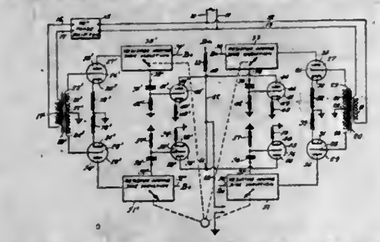
2,469,152
TRAILER DOLLY
Howard Payton Brown, Meridian, Miss.
Application July 10, 1946, Serial No. 682,649
7 Claims. (Cl. 16—44)

1. In a trailer dolly or truck, a base plate adapted to be secured to a trailer frame or chassis, a spring support formed of swingably connected hinge sections, one of the hinge sections being secured to said base plate and disposed therebeneath, a leaf spring secured at one end to the other hinge section and projecting outwardly and downwardly therefrom, said last mentioned hinge section being disposed beneath the first mentioned hinge section, an axle keyed to the opposite, free end of said spring and adapted to journal a ground engaging wheel thereon.

2,469,153
ABSORPTION REFRIGERATING SYSTEM
William L. Bulkley, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application December 27, 1944, Serial No. 569,937
2 Claims. (Cl. 62—119.5)

1. An absorption type refrigerating system having a circuit for gravity circulation of inert gas including an evaporator and an absorber, and a circuit for absorption liquid including said absorber and a generator, said evaporator having a low temperature freezing section and a higher temperature air cooling section, said absorber being constructed and arranged for flow of gas therethrough unobstructed by liquid flowing therein, one section of said absorber having a greater resistance to gas flow therethrough than other sections of the absorber, and said circuits being so constructed and arranged that liquid

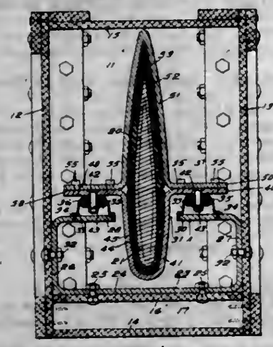
first enters said absorber through said high resistance section and flows only concurrent with the gas in this section but countercurrent with gas in the other sections, the direction of flow in said high resistance absorber section being such that circulation of gas in the gas circuit involves flow of gas from said evaporator freezing section to said evaporator air cooling section.



2,469,154
PREPARATION OF ORGANO-SILICON COMPOSITIONS CONTAINING RAPIDLY POLYMERIZABLE OLEFINIC DOUBLE BONDS
Raymond H. Bunnell and David B. Hatcher, Toledo, Ohio, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
No Drawing. Application April 30, 1946, Serial No. 24,436
16 Claims. (Cl. 260—46.5)

1. A method of producing vinylphenylhalosilanes that comprises pyrolyzing a silane whose molecule consists of a silicon atom to which are attached three halogens, each having an atomic weight less than 40, and one (haloethyl) phenyl radical in which the halogen substituent has an atomic weight between 20 and 100.

2,469,155
VARIABLE PHASE SHIFTER
William H. Bussey, Chicago, Ill., assignor to M-K Enterprises, Inc., Chicago, Ill., a corporation of Illinois
Application February 1, 1947, Serial No. 725,764
3 Claims. (Cl. 323—119)

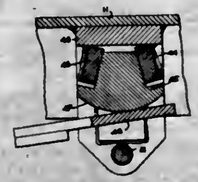


1. A continuously variable phase shifter having a substantially constant amplitude at the output and being substantially independent of frequency, said shifter comprising a pair of push-pull amplifiers, each push-pull amplifier having a pair of vacuum tubes arranged to form a push-pull amplifier and having inputs and outputs, a resistance device for each vacuum tube, said device having manual means for varying the same to provide an output potential sinusoidally related to the manual variation, means for connecting a device in the circuit of a corresponding vacuum

tube to control the output thereof, means for combining the outputs of all devices into one system output terminal, all said devices being similar and having their manual controls coupled together for common movement, the controls for the devices for one push-pull amplifier being 180 degrees out of phase with each other with regard to adjustment, the controls for the devices corre-

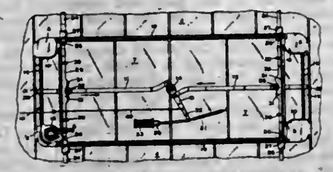
sponding to the other push-pull amplifier being also 180 degrees out of phase with each other, the controls for the devices for one push-pull amplifier being 90 degrees out of phase with the controls for the other push-pull amplifier, means for supplying alternating potentials to the input of one push-pull amplifier, and means for supplying similar alternating potentials 90 degrees out of phase to the input of the other push-pull amplifier.

2,469,156
PACKAGING
Louis H. Cargill, Jenkintown, Pa., assignor to Specialty Packaging Company, Prospect Park, Pa., a partnership
Application August 14, 1947, Serial No. 768,698
1 Claim. (Cl. 206—46)



A package for rotor blades having an airfoil section and a reduced mounting portion, comprising a generally oblong box, a pair of generally C-shaped frames mounted in longitudinally spaced relation transversely in the box with the open side of the C-shaped frames extending upwardly to form transversely spaced supporting arms generally parallel with the bottom of the box, a permanent airfoil section-receiving element comprising a pair of generally aligned spaced wing elements connected by a trough of partial airfoil shape bent downwardly out of the line of the wings in the space between the said supporting arms and toward the closed opposite side of the frame, means for isolatingly mounting the said wings on the said arms in a substantially shock-proof mounting, a yielding layer disposed in said trough in position to receive and to be compressed by an edge of the airfoil section of the blade, a complemental detachable airfoil section engaging element comprising a pair of generally aligned spaced wing elements connected by a trough bent upwardly out of the line of its said wings, a layer of yielding material disposed in the last mentioned trough and arranged to be compressed by the other edge of said airfoil section when the complemental element is pushed upon the blade, means connecting the respective juxtaposed wings to establish clamping of the airfoil section of the blade, means for resiliently clamping the reduced mounting portion of said blade, and means for mounting the last mentioned means isolatingly upon the other of said pair of C-shaped frames.

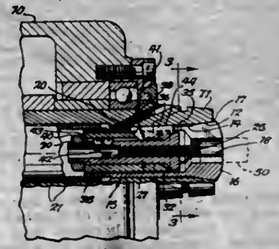
2,469,157
THERMOSETTING UREA-FORMALDEHYDE COMPOSITION
David E. Cordier, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
No Drawing. Application February 4, 1946, Serial No. 6,343
5 Claims. (Cl. 260—17.3)



1. A dry thermosetting composition comprising a urea-formaldehyde reaction product and a potentially acid substance consisting of a monoester of benzyl sulfonic acid with an alcohol selected from the class consisting of (1) borneol, (2) menthol, (3) unsubstituted saturated aliphatic monohydric and dihydric alcohols having from two to eight carbon atoms, (4) mono-ethers of (a) unsubstituted saturated aliphatic monohydric alcohols having from one to five carbon atoms and unsubstituted monohydric phenols having from six to sixteen carbon atoms and having not more than two side chains each of which is saturated and contains not more than five carbon atoms with (b) unsubstituted aliphatic dihydric alcohols having from two to five carbon atoms, (5) polyethylene glycols having from two to four ethylene groups, and (6) mono-substituted hydrocarbons of the benzene series having from eight to twenty-one carbon atoms and having from one to three side chains each of which is saturated and contains not more than five carbon atoms, the substituted carbon atom being attached only to one hydroxy group, from one to two hydrogen atoms and from one to two exocyclic carbon atoms.

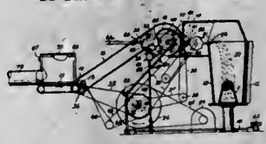
2,469,158
SPRING LOADING MEANS
Joseph H. De Frees, Warren, Pa., assignor to Pennsylvania Furnace and Iron Company, Warren, Pa., a corporation of Pennsylvania
Application July 19, 1944, Serial No. 545,619
1 Claim. (Cl. 267—56)

In leaf spring suspension means interposed between an axle and frame of a vehicle, and wherein a free end of a leaf spring is reciprocably movable with respect to a fixed point on said frame, said reciprocating movement being responsive to spring flexure resulting from fluctuations in load application, novel spring loading means comprising, in combination, a bearing surface on said leaf spring near said free end thereof, an inverted U-shaped bracket fixed on said frame and having a pair of spaced legs extending downwardly and straddling said free end of said spring, seating means consisting of a pair of spaced seating blocks extending transversely between said legs, and fixed with respect thereto, and having downwardly divergent inner wall portions to form a wedge-like seat, a loading block having a wedge-like stem portion nestable in said seat, and having a bearing portion in sliding contact with said bearing surface on said spring, said loading block being held in position by spring thrust resulting from loading flexure of said spring, but said loading block being adapted to drop by gravity from its said seat when said loading flexure is relieved.



2,469,159
PASSENGER ESCAPE FOR VEHICLES
Joseph R. Dombrowiak, Portland, Oreg.
Application May 17, 1946, Serial No. 670,571
2 Claims. (Cl. 292—33)

1. A passenger escape for motor vehicles, the vehicle being formed with an escape opening leading to the exterior of the vehicle, a closure for said opening, an outstanding flange on the vehicle surrounding the edge of the opening, a depending flange on the closure adjacent the outstanding flange, springs underlying the closure and bearing on the depending flange to be tensioned when the closure is in closed position and to exert an initial opening of the closure when free to act, a lever pivoted to the closure, locking rods carried by the closure, said locking rods having their inner ends pivoted to the lever, the outer ends of the locking rods underlying the edges of the walls of the escape opening, bars mounted to the underside of the closure and extending transverse the locking rods, means carried by the vehicle and operative under sufficient contact thereof externally of the vehicle to engage and operate the slidable bars, and cooperating means on the slidable bars, and locking rods to move said locking rods from the edges of the walls of the opening in operation of the slidable bars.



2,469,160
WORK STOP FOR USE WITH COLLETS
Leigh R. Evans, Elmira, N. Y., assignor to Hardinge Brothers, Inc., Elmira, N. Y.
Application September 12, 1947, Serial No. 773,542
12 Claims. (Cl. 279—51)

2. In a work stop device for use with a machine having a rotary spindle and a collet extending into said spindle and having spring fingers spaced apart by slots, that improvement which comprises locking parts extending through said slots, a pair of relatively movable members having portions engaging said locking parts to move the same outwardly into engagement with said spindle, means for moving said movable members relatively to each other to wedge said

locking parts in engagement with said spindle, one of said members having a work stop associated therewith, said locking parts, when in their operative positions in a spindle being spaced from the ends of said slots to permit movement of said collet into and out of work gripping positions.

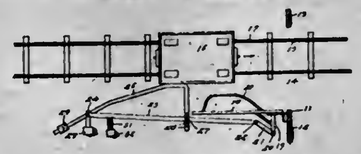
2,469,161
AUXILIARY FEEDER FOR HAT FORMERS
Herbert F. Fitch, Norwalk, Conn.
Application January 4, 1945, Serial No. 571,266
14 Claims. (Cl. 19—67)

1. In a device of the character described, a feeder for hat formers including a movable conveyor, means for transferring fur from the conveyor to the former, and an auxiliary feeder for feeding fur to the conveyor comprising a housing over the conveyor, a blower for separating the fur and feeding it to the housing including a second housing and a tooth studded drum and suction fan in said second housing, a conduit leading from the fan to the first housing, and means for feeding fur to the second housing and drum including an inclined chute leading to said housing, a closure controlling the entrance to the housing, and a slowly rotating toothed cylinder in the chute adjacent the closure to control passage of the fur down the chute.

2,469,162
RADIO-FREQUENCY DISTRIBUTION TRANSFORMER
John B. Gehman, Haddonfield, and Alfred H. Turner, Collingswood, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application October 12, 1946, Serial No. 702,986
11 Claims. (Cl. 175—359)

1. A wide frequency band coupling transformer comprising at least two concentric cylindrical shields, a magnetic structure, interleaved windings completely enclosed within said magnetic structure, connections from opposite ends of said windings to the inner one of said shields,

a connection from the remaining end of one of said windings to another of said shields, output terminals connected between two of said shields to minimise winding lead inductance effects, and



input terminals connected between one of said shields and the remaining end of another of said windings, the separation between said shields being selected to minimise surge impedance discontinuities.

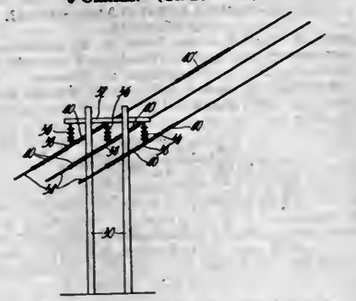
2,469,163
CANDLEHOLDER
Chace D. Gilmore, West Chester, Pa.
Application July 16, 1947, Serial No. 761,243
1 Claim. (Cl. 67—27)

A candle holder consisting of a hollow tubular housing made of non-inflammable material and adapted to receive and wholly enclose and conceal a wax candle except for the upper tip thereof; said housing having a tapered upper end with a central opening for the upper tip of the candle so that the candle wick may project outside of the housing; the tapering of the upper end being sufficient to form abutment surfaces for the upper end of the candle; a candle pusher provided with a seat at its upper end to receive the lower end of the candle, said pusher being received within and freely slidable inside the housing; said pusher having tapered side walls so that it may be received within the tapered upper end of the housing when the candle is almost completely consumed; a coil spring within the housing below the pusher; means to connect the coil spring with the pusher so that the pusher is moved upwardly thereby; a closure plug adapted to close the lower end of the housing; and means to hold the closure plug within the lower end of the housing by friction; the upper end of the closure plug providing an abutment for the lower end of the coil spring.

2,469,164
MINE TRAP DOOR
Lawrence H. Hawkes, Cannelton, W. Va.
Application November 5, 1945, Serial No. 626,728
2 Claims. (Cl. 246—304)

2. In combination with an outwardly opening hinged door, a bracket arm secured to and projecting from the outer side of the hinged door, a link pivotally connected at one of its ends to the free end of the bracket arm and extending therefrom generally at an oblique angle thereto in the closed position of the door and in a horizontal plane, a lever having one end pivotally connected to the opposite end of the link, a post on which the opposite end of the lever is pivotally mounted for swinging movement in a horizontal plane and which is disposed remote to the door and on the outer side thereof, said link, lever and bracket arm being arranged to swing the door to an open position when the lever is swung in one direction on its last mentioned pivot, and a bumper pivotally mounted on the post and connected to the intermediate portion of the lever, said bumper having a portion extending generally toward the door and adapted to extend diagonally into the path of movement of a vehicle moving toward the outer side of the door to be engaged and swung thereby out of the path of movement of the vehicle for swinging the lever in the direction for opening the door, said link extending from the bracket arm in a direction toward said path of movement for exerting substantially a direct thrust against the bracket arm at an oblique angle to its axis for rapidly moving the door to an open position during the initial swinging movement of the lever away from said path of movement.

2,469,165
CORRECTION DEVICE FOR ELECTRON LENSES
James Hillier, Cranbury, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 29, 1946, Serial No. 706,342
5 Claims. (Cl. 250—49.5)

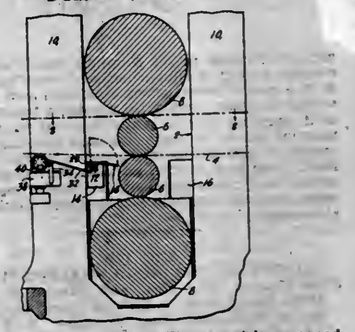


1. Apparatus for compensating for mechanical and electromagnetic assymmetries between the electromagnetic structure and pole pieces in an electron lens employed for focusing an electron beam, including an electromagnetic field aligning element concentric with said beam in the region substantially entirely within said structure and coaxial with one of said pole pieces.

2,469,166
BINDING MEANS FOR LOOSE LEAVES
Harry Li Castri, New York, N. Y.
Application August 17, 1945, Serial No. 611,137
3 Claims. (Cl. 129—18)

1. Binding means for loose pages, comprising a pair of superimposed slidably connected strips, the bottom one of said strips having a plurality of longitudinally spaced transverse loop portions, and the top one of said strips having a plurality of complementary loop portions normally disposed beneath said loop portions, and when said strips are relatively shifted said loop portions are separated to engage the ends of slots in loose leaf pages.

2,469,167
VIBRATION DAMPER
Jess C. Little, Cleveland, Ohio, assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application June 11, 1946, Serial No. 676,064
6 Claims. (Cl. 174—42)

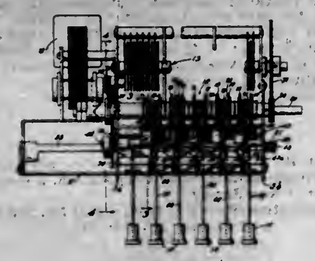


6. The combination, with an elongated relatively thin member mounted so as to be subject to vibration, of a vibration damper affixed thereto, said damper comprising a plurality of elongated tubes, each tube having end closures and having a quantity of small particles of hard material within it sufficient to fill a substantial part of the space but to leave a substantial free space therein, each of said tubes being disposed along the elongated member so as to be in contact therewith throughout substantially their entire length.

2,469,168
LOOP-ANTENNA TUNING SYSTEM
Bernard D. Loughlin, Lynbrook, N. Y., assignor to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application December 17, 1946, Serial No. 716,855
7 Claims. (Cl. 250—20)

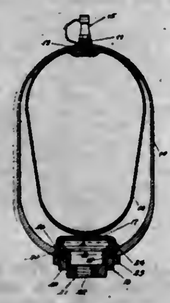
1. A loop-antenna tuning system comprising: an inductor; a loop antenna effectively coupled across at least a portion of said inductor to provide therewith a composite value of inductance; a condenser, including a capacitance-adjusting element, coupled across said inductor to provide a parallel-resonant circuit having a predetermined Q at a frequency within a range of operating frequencies; and an inductance-adjusting element, associated with said inductor and mechanically coupled to said capacitance-adjusting element for movement in unison therewith to tune said circuit over said range, having a configuration and movement so related to the configuration and movement of said capacitance-adjusting element as to maintain over said range a ratio of composite inductance to capacitance for said circuit varying in opposite sense to any variations of Q thereof from said predetermined value of Q to maintain the figure of merit of said system substantially constant with said tuning of said circuit.

2,469,169
STRIP GUIDE
Glenn R. Markle, Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application March 1, 1945, Serial No. 580,404
1 Claim. (Cl. 80—51)



A guide for a rolling mill comprising spaced brackets, an elongated angle iron cross bar supported at each end by said brackets, and having a horizontal leg and a vertical leg depending from said horizontal leg, said horizontal leg furnishing a flat upper face throughout the length of the cross bar, a substantially flat strip guiding member, hinge means at the juncture between said legs mounting said guiding member for swinging movement on said cross bar, wherein said guiding member has an operative position resting on the flat upper face of said cross bar and is movable about said hinge means to an inoperative position, and a stop bar protruding horizontally from said vertical leg beneath said hinge means and limiting movement of said guiding member into its inoperative position.

2,469,170
CONTROL APPARATUS FOR TUNERS
Edward J. Mastney, Berwyn, and John H. Williams, Chicago, Ill., assignors to Oak Mfg. Co., Chicago, Ill., a corporation of Illinois
Application December 10, 1945, Serial No. 633,992
8 Claims. (Cl. 192—150)

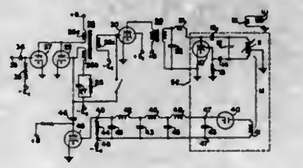


1. In combination, a preselector unit including a shaft, said unit having two oppositely driven

members cooperating with a member rigid on said shaft and being adapted to lock when the shaft is in a home position, an electric motor and gear train and power coupling means for selectively supplying power to said unit, a switch for controlling said motor, means for mounting at least part of said gear train on a movable bracket, means for maintaining said bracket in a normal position when said motor is not stalled, said bracket being movable from its normal position by motor torque when said motor is stalled by said unit reaching a home position, means

connecting said power coupling means and said electric switch so that when said coupling means is in a power transmitting condition said electric switch is closed, means for normally maintaining said coupling means in an inoperative position, manual means for rendering said coupling means operative and means responsive to bracket movement from said normal position for opening said switch, said coupling means becoming inoperative when said electric switch is opened upon bracket movement.

2,469,171
ACCUMULATOR SHELL SEALING PLUG
Jean Mercier, New York, and Edward M. Greer, West Hempstead, N. Y.; said Greer assignor to Greer Hydraulics, Inc., Brooklyn, N. Y.
Application July 6, 1945, Serial No. 603,546
3 Claims. (Cl. 138—30)



1. In an accumulator comprising a shell having two ports, a deformable partition secured within said shell separating said two ports from each other, a strainer plug placed inside the larger of said ports, a split spring locking ring of greater diameter than said largest port placed inside said port, means to secure said strainer plug and locking ring in juxtaposition with the said shell at the periphery of the large port.

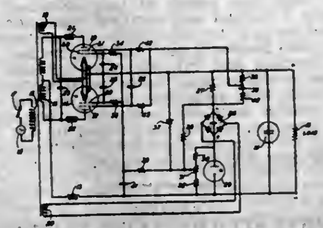
2,469,172
WITHDRAWN

2,469,173
PROCESS OF SEPARATING DOISYNOLIC ACIDS AND INTERMEDIATES THEREFOR
Karl Miescher, Riehen, and Rudolf Rometsch, Basel, Switzerland, assignors to Ciba Pharmaceutical Products, Inc., Summit, N. J.
No Drawing. Application April 22, 1947, Serial No. 743,194. In Switzerland April 30, 1946
8 Claims. (Cl. 260—473)

1. In a process for the production of the separated pure optical antipodes of optically active compounds, the step of treating a member of the group consisting of a racemic doisynolic acid and reactive derivatives thereof, wherein the phenolic hydroxyl group is protected, with an optically active alicyclic alcohol, whereby a mixture of separable diastereoisomers is produced.

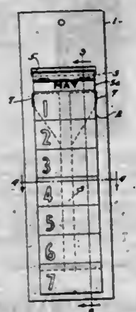
2,469,174
PULSE-MODULATED WAVE-SIGNAL GENERATOR
Jasper J. Okrent, Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application June 6, 1945, Serial No. 597,777
9 Claims. (Cl. 250—36)

1. An arrangement for generating wave signals of pulse wave form comprising, a wave-signal oscillation generator having an output circuit and normally maintained in a nonconducting condition, means for supplying to said generator a control pulse effective to initiate and sustain oscillations therein to produce a wave signal, a time-delay system coupled to said output circuit of said generator to be responsive to the initiation of said oscillations for deriving a control potential and for utilizing said control potential effectively to interrupt said control pulse and restore said generator to its normal nonconducting condition a predetermined time interval following the initiation of said oscillations, and means for deriving from said generator an output wave signal of pulse wave form, each pulse of which has a duration corresponding to said predetermined time interval.



2,469,175
MATTRESS
Louis Paransky, Pittsburgh, Pa., assignor to The Star Bedding Co., a partnership
Application November 28, 1944, Serial No. 565,469
1 Claim. (Cl. 5—351)

A mattress comprising a ticking including top and bottom sheets, end and side walls, longitudinally extending reinforcing strips stitched to the top and bottom sheets of said ticking, coil springs arranged in transverse and longitudinally extending rows and mounted vertically in the ticking between the upper and lower reinforcing strips, pairs of ropes connecting each row of springs to the top and bottom sheets of said ticking, one end of one of each pair of ropes passing through an end wall and secured to the end of the other of the pair of ropes, and said ropes looped around intermediate coils of the springs adjacent one wall, one of said ropes then passing upwardly and the other downwardly in said adjacent coil springs, each looped through the sheets and the reinforcing strips, said ropes



then looped around the adjacent end coils of the springs and then passed to the next adjacent longitudinally aligned springs and secured thereto by being looped through the adjacent sheets and reinforcing strip and about the adjacent upper and lower coils of the last-mentioned spring, said ropes then successively secured in a like manner to each spring in a longitudinal row to the last one adjacent the end wall opposite said one end wall, said last springs having the ropes then looped around intermediate coils thereof and said opposite end wall having the opposite end of the one of each pair of ropes passed therethrough and fixed to the opposite end of the end of the other of the pair of ropes.

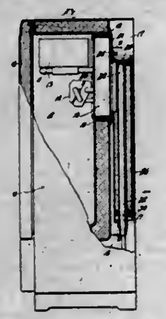
2,469,176
CURRENT SUPPLY APPARATUS
James A. Potter, Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 18, 1946, Serial No. 662,953
6 Claims. (Cl. 175—363)

1. In combination a space discharge device having an anode, a cathode and two control electrodes, a first circuit connecting said anode and said cathode including a load to which current from a source is supplied through said first circuit when said device conducts space current, a shunt current path connected across said load, means in said shunt path for supplying current thereto, means for connecting a first of said control electrodes to said path for impressing thereon a changing potential with respect to the potential of said cathode for preventing the flow of space current in said device during an initial period commencing at the time that the supply of current to said shunt path is initiated and for causing space current to flow subsequent to said initial period, and means for connecting the second of said control electrodes to said shunt path for impressing thereon subsequent to said initial period a potential with respect to the potential of said cathode having variations corresponding to load voltage changes for causing said load voltage changes to be minimized.

2,469,177
FOLDABLE LEAF MEMORANDA CALENDAR HAVING A POCKETED BACKING MEMBER
Paul E. Ruffner, Columbus, Ohio
Application June 4, 1945, Serial No. 597,441
2 Claims. (Cl. 40—119)

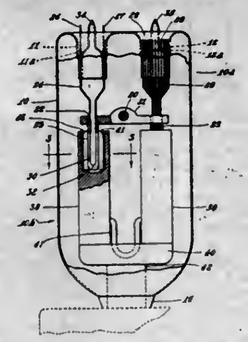
1. A foldable leaf calendar comprising: a backing composed of a flexible sheet, a pad formed of a plurality of foldable leaves attached at their upper edges only to said backing in depending order on the front thereof, said backing immediately above the upper edge of said pad being formed with an unobstructed transversely extending slot of a width for the insertion therethrough of the pad leaves, said backing immediately below said slot being formed with a transversely extending one-piece web whose upper edge is exposed at the slot and a central longitudinal tongue strip extending from and below said web approximately the length of said leaves and connected at its lower end to the backing, said backing including slits to form the side edges of the tongue strip and to provide a flexible wing on each side of said tongue strip, the upper ends of the wings being free of said web, said wings in conjunction with said tongue strip forming a pocket to receive used leaves of said pad which are folded upwardly from normal pendent positions at the front of the backing and then passed through said slot and then directed downwardly so that the folded leaves may cross the rear surface of said web and be disposed between the front surfaces of said wings and the rear surface of said tongue strip.

2,469,178
SQUARE SECTION CABLE FOR POWER TRANSMISSION
Jacinto Folch Salvans, Barcelona, Spain
Application September 24, 1945, Serial No. 618,164
In Spain August 1, 1945
2 Claims. (Cl. 87—6)



1. A cable for power transmission including a plurality of sections arranged together in such manner as to be rectangular in cross section, each cable section including a longitudinally ex-

tending threaded core, an inner threaded covering spirally wound about the core, an outer threaded covering also spirally wound about the inner covering and in an opposite direction to the spiral winding of the inner covering and the threaded core and the inner and outer

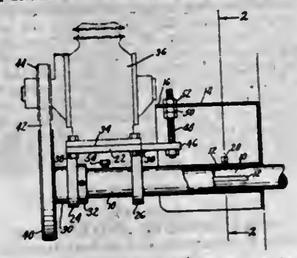


threaded coverings being each composed of a plurality of longitudinally stretched and parallel arranged threads and a covering composed of a plurality of threads arranged side by side to present a tape-like formation which is spirally wound about the longitudinally extending threads.

2,469,179
REFRIGERATION
Albert Schultze, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application November 7, 1947, Serial No. 784,597
5 Claims. (Cl. 62—119.5)

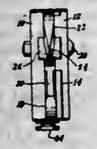
1. A refrigerator including a food storage compartment, a vertical flue exterior of said food storage compartment at the rear thereof and a closure member between said food storage compartment and said flue, said closure member including a mounting plate provided with an opening therein, a refrigerating system for cooling said food storage compartment, said refrigerating system including an evaporator in said food storage compartment, a gas heat exchanger in said flue, and means for insulating said gas heat exchanger, said insulating means including a channel member attached to said mounting plate and provided with an opening therein, which opening is aligned with the opening in the mounting plate, said channel member being provided with a contiguous flange along the periphery thereof, a casing mounted on said channel member and adapted to cooperate therewith to encompass said heat exchanger in spaced relation therewith, means for attaching said casing to said channel member, closure members for closing each end of said casing, and insulating material within said casing.

2,469,180
SELF-CONTAINED HIGH-FREQUENCY OSCILLATOR
Alexander Senauke, Brooklyn, N. Y., assignor to Amperex Electronic Corp., Brooklyn, N. Y.
Application May 10, 1946, Serial No. 668,711
5 Claims. (Cl. 250—27.5)



1. A high frequency oscillator tube adapted to generate electrical oscillations at a predetermined operating frequency comprising, an evacuated envelope having a portion of insulating material, a U-shaped radio frequency line of high thermal and electrical conductivity within said envelope and having anode end portions, said line having an electrical length between said end portions tuned substantially to an odd multiple half wave length at said operating frequency, a thermal and electrical conductor connected to said line at a point of substantially zero radio frequency potential intermediate said end portions and extending through said envelope portion in hermetically sealed relationship therewith, heat dissipating means in good thermal contact with said conductor externally of said envelope, and means coupled to said conductor to connect a direct potential to said conductor externally of said envelope.

2,469,181
POWER ATTACHMENT FOR TRACTORS
Peter J. Slater, East Hartford, Conn., assignor to The South Windsor Manufacturing Company, South Windsor, Conn., a corporation of Connecticut
Application June 14, 1947, Serial No. 754,627
4 Claims. (Cl. 74—15.6)

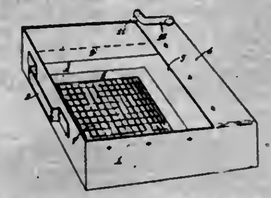


1. In a power attachment for a tractor having a rearward projecting power take-off shaft and having a guard partly surrounding the take-off shaft which guard extends rearward beyond the rear end of the shaft and is open at the rear, the combination of a longitudinal transmission shaft which is adapted at its front end to extend forward within the guard and which is hollow at its said front end and adapted to fit around

the rear end of the take-off shaft so as to be at least partly supported by the latter, means for connecting the transmission shaft at its said front end with the take-off shaft for rotation in unison therewith, a platform positioned closely adjacent the rear portion of the transmission shaft and provided with bearings in which the said rear portion of the shaft is rotatable, the said platform being at least partly supported on the transmission shaft when the latter is connected with

the take-off shaft and having a substantially flat face for supporting a power driven device and the said platform when the transmission shaft is so connected being behind a transverse plane through the rear of the guard so that a power driven device positioned on the platform is at the rear of the guard, and a member connected with the transmission shaft adjacent the platform for engaging an element adapted for transmitting power from the said shaft to a power driven device supported on the platform.

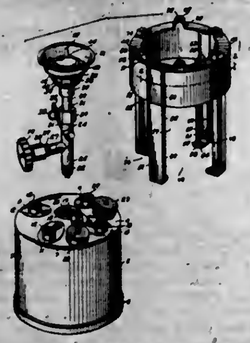
2,469,182
PNEUMATIC CLIPPER
Peter J. Slater, East Hartford, Conn., assignor to The South Windsor Manufacturing Company, South Windsor, Conn., a corporation of Connecticut
Application March 27, 1946, Serial No. 657,504
18 Claims. (Cl. 30—228)



18. A pneumatic clipper comprising in combination, a main housing having a chamber therein, the said housing having a longitudinally extending air passage therein communicating at one end with the chamber and having a recess extending transversely of and intersecting the air passage and extending to the housing exterior, means for connecting the other end of the air passage with air pressure means, an abutment jaw rigidly connected with the housing and projecting therefrom at one end, a cutting jaw pivotally connected with the housing and projecting therefrom at the last said end in adjacent cooperative relationship with the abutment jaw, a blade pivotally movable within the housing chamber and operatively connected with the pivoted cutting jaw, the said blade having cooperative relationship with the walls of the said chamber, a spring for biasing the blade in the direction to move the cutting jaw away from the abutment jaw, a normally closed valve in the transversely extending recess in the housing, the said valve when in closed position permitting air to flow from the chamber to the exterior of the housing and when in open position preventing such flow, and a manually engageable button at the exterior of the housing and connected with the valve to open it and thus admit air under pressure to the chamber so as to pivotally move the blade in the direction to pivotally move the cutting jaw toward the abutment jaw.

2,469,183
PANEL MOUNTING
Walter William Small, Birmingham, England, assignor to Auster Limited, Birmingham, England, a company of Great Britain
Application August 22, 1945, Serial No. 611,989
In Great Britain December 12, 1944
6 Claims. (Cl. 20—56.4)

1. A panel assembly comprising a panel, a frame having a base surface surrounding said panel, said frame having an upstanding wall on one side of said base surface and a continuous longitudinal groove intermediate the ends thereof and extending below the same, a flexible, one-piece glazing strip mounted upon said base surface adjacent said upstanding wall and having a base portion extending over said groove, said strip having in its upper face a continuous channel receiving the edge of said panel and in the underside of its base portion a continuous groove opposed to and adjacent said first mentioned groove, said opposed grooves being outwardly offset from and below said channel and forming an enclosed space, and a flexible longitudinal retaining member removably located in said opposed grooves to key said glazing strip to said frame and adapted to cause a side wall of said channel to be pressed laterally against said panel.

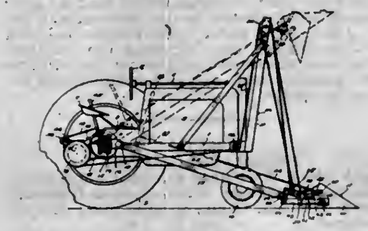


2,469,184
SPONGE-DOWN APPARATUS
Charles William Ivor Thomas, Market Drayton, England
Application May 8, 1946, Serial No. 668,079
In Great Britain May 15, 1945
5 Claims. (Cl. 4—145)

1. A portable sponge-down apparatus comprising an open rectangular body portion constructed to resemble a suitcase including a bottom, side and end walls forming a water receiving basin, a top front wall joining the side walls and one end wall providing a chamber at one end of the

basin for receiving the waste water when the chamber is lowermost, a removable lid for the open part of the body portion adapted to partly overlie the front wall having flanges engaging the side walls and means for removably holding the lid in position.

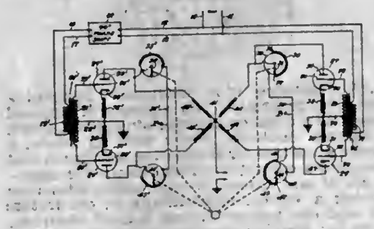
2,469,185
PORTABLE STOVE
Boyd W. Tullis, Wichita, Kans., assignor to The Coleman Company, Inc., Wichita, Kans., a corporation of Kansas
Application April 18, 1946, Serial No. 663,025
4 Claims. (Cl. 158—33)



1. A stove of the character described including a cylindrical fount, a valve and burner unit having a tubular leg mounted on the upper end of the fount substantially in the axial center thereof, a plurality of lugs having threaded sockets and fixed to said top in a circular series about the leg of the valve unit, a grid ring encircling the burner of said unit and having an annular depending skirt substantially conforming to the diameter of the fount, legs fixed to the skirt of the grid ring in corresponding relation to the spacing of said lugs and having inturned apertured feet on the lower ends seated on the lugs with the apertures in registry with the sockets, and fastening devices extending through the apertured feet and into the threaded sockets of the lugs for securing the feet to said lugs and to anchor the grid ring on the fount.

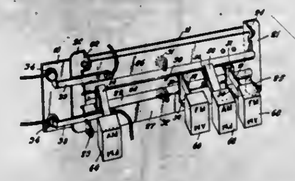
2,469,186
HIGH-SPEED GRINDING SPINDLE
Clarence W. Tydeman, San Mateo County, Calif., assignor to General Engineering and Dry Dock Corporation, San Francisco, Calif., a corporation of Delaware
Application June 19, 1947, Serial No. 755,797
6 Claims. (Cl. 308—122)

1. A high speed spindle and bearing assembly, comprising, an elongated sleeve, bearings positioned therein, one near each end thereof, the openings in the bearings being conical and outwardly flaring, means for securing the bearings in a fixed relation relative to each other and to the sleeve, a spindle extending through the bearings, said spindle having a conical bearing sized and shaped for engaging the correspondingly shaped outer bearing near one end of the sleeve, and a conical bearing slidably connected with the other end for operative engagement with the other outer bearing, means for adjusting the movable bearing along the spindle and for securing it in adjusted position, oil seals between the spindle and the outer ends of the sleeve, an oil inlet pipe in communication with the interior of the sleeve, between the two bearings, whereby oil may be introduced thereinto under pressure, and an oil outlet pipe in communication with the interior of the sleeve, between the outer ends of the bearings and the oil seals, whereby any oil that has passed through the bearings will be removed.



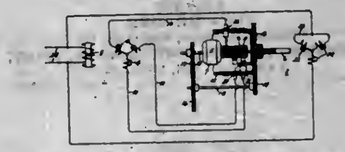
2,469,187
POWER DIGGER AND LOADER
Orin B. Warnock and Robert Benner, Nampa, Idaho
Application October 26, 1945, Serial No. 624,715
2 Claims. (Cl. 214—140)

1. The combination with a tractor including a chassis frame and a power take-off, of a digger scoop, a scoop elevating and lowering frame pivotally mounted on said chassis frame for vertical swinging movement, means to swing said frame upwardly by operation of said power take-off shaft, means to mount said scoop on said frame for tilting into dumping position, and means for tilting said scoop manually into dumping position operable from the tractor and comprising pairs of links on opposite sides of said scoop pivoted together and to said scoop elevating frame and scoop in each pair to form closed elbow joints, and a lever operatively connected to said links to open the joints formed thereby.



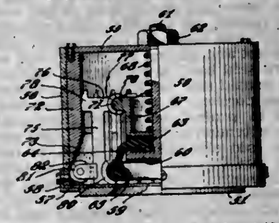
2,469,188
VARIABLE PHASE SHIFTER
George K. Werner, Chicago, Ill., assignor to M-K Enterprises, Inc., Chicago, Ill., a corporation of Illinois
Application February 1, 1947, Serial No. 725,755
3 Claims. (Cl. 323—119)

1. A continuously variable phase shifter having a substantially constant amplitude at the output, said shifter comprising a pair of vacuum tubes arranged to form a push-pull amplifier and having inputs and outputs, a short-circuited resistor for each vacuum tube, a wiper cooperating with each resistor to form a potentiometer, means for connecting the output of each vacuum tube to the wiper, a source of anode potential connected to the short-circuited ends of each of said resistors, each short-circuited resistor being disposed to provide a range of travel over which the cooperating wiper may move, said range of travel corresponding to 180 degrees of arc, one potentiometer being arranged so that it is 180 degrees out of phase with the other, a second push-pull amplifier and pair of short-circuited resistors and cooperating wipers similarly arranged and



connected, the potentiometers of the first push-pull amplifier being respectively 90 degrees out of phase with the potentiometers of the other push-pull amplifier, means for moving all wipers simultaneously, means for supplying alternating potentials to the input of one push-pull amplifier, means for supplying similar alternating potentials but 90 degrees out of phase to the input of the other push-pull amplifier and means for combining the potentials from the four wipers into one output potential.

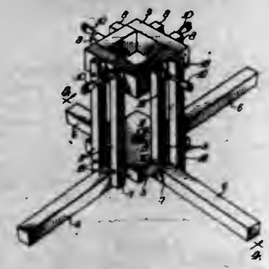
2,469,189
PRESELECTOR FOR RADIO-FREQUENCY NETWORK
John H. Williams, Chicago, Ill., assignor to Oak Mfg. Co., Chicago, Ill., a corporation of Illinois
Application May 3, 1946, Serial No. 666,970
2 Claims. (Cl. 250—40)



1. A push-button tuner for radio receivers including a series of transversely aligned, longitudinally movable operating rods, each rod controlling a station setting, two switch bars on opposite sides of the series of rods, every rod being equidistant from the two switch bars, a spring clip for each rod and attachable thereto in one of two positions only, said two positions being 180 degrees apart, each clip having an engaging portion extending away from its rod in one direction only so that the projection of said portion falls on a switch bar, said rod normally having a position where the engaging portion of its spring clip is free, said rod during actuation bringing the clip portion into engagement with a switch bar, each switch bar controlling a circuit for an electrical wave band selector.

2,469,190
ANGULAR MOTION TRANSMITTING APPARATUS
Arthur P. Adamson, Ballston Spa, N. Y., assignor to General Electric Company, a corporation of New York
Application May 1, 1948, Serial No. 24,662
7 Claims. (Cl. 318—24)

1. An electromotive device comprising a stator member having polyphase windings with two of the phases short circuited, a rotor member having a winding thereon connected to a commutator, a plurality of brushes engaging said commutator, means comprising a rotatable member connected to rotate said brushes relative to said stator member and mechanical driving means interconnecting said rotor and rotatable member.

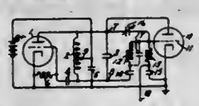


2,469,191
BOTTLE CAPPING DIE
Arthur H. Bedworth, Pomona, Calif., and Lewis G. Curtis, Winchester, Mass.; said Bedworth assignor to said Curtis
Original application May 31, 1941, Serial No. 395,958. Divided and this application January 20, 1947, Serial No. 723,136
3 Claims. (Cl. 226—86)

1. A machine for sealing a cap about the mouth and neck of a bottle, comprising a cylindrical casing having an open lower end for receiving the neck of a bottle having a cap formed with a flange and disposed on its mouth, the inner peripheral wall of said casing having an outwardly flaring cam-like annular member, a sealing member mounted within and movable axially relative to said casing, said sealing member having a central body portion engageable with the body of a cap positioned on the mouth of a bottle to be sealed and a flexible and resilient depending annular skirt portion engageable with the flange of said cap, the lower end of said skirt portion terminating in an enlarged beaded edge, and a plurality of spaced fingers circumposed about said skirt portion within said casing, said fingers being supported at their lower ends by said beaded edge so as to swing radially inwardly and outwardly within said casing, the lower ends of said fingers having parts engageable with said cam-like member so that in response to axial movement of said sealing member relative to said casing in one direction, said fingers are swung inwardly to contract said skirt portion radially, thereby crimping the flange of a cap about the

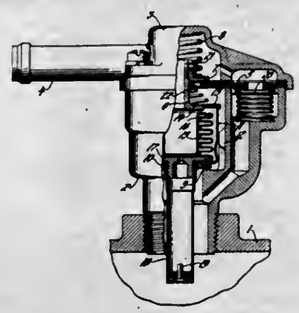
neck of a bottle inserted in the opening of said casing, and in response to axial movement of said sealing member in the opposite direction, said fingers are free to move outwardly, thereby to permit said skirt portion to expand radially and release the neck of said bottle.

2,469,192
TREE HOLDER
Charles A. Bouc, Chicago, Ill.
Application August 26, 1947, Serial No. 770,677
3 Claims. (Cl. 248—46)



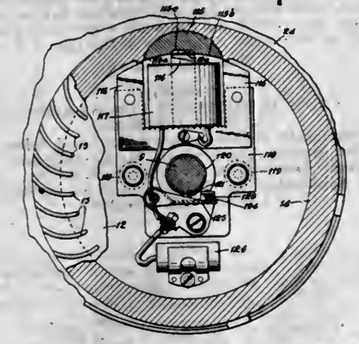
2. A holder for elongated objects such as trees, comprising a base, a frame having a central opening to receive an elongated object, a plurality of side members rigidly secured at their upper ends to said frame and at their lower ends to the peripheral edges of said base and having portions extending downwardly below said base, a spike having its pointed end extending upwardly through said base for impaling said elongated object and having its opposite end extending below said base, a plurality of legs pivotally secured to said side members at the downwardly extending portions of the latter, said legs being adapted to project outwardly from said base when in extended position and to fold upwardly adjacent said side members when in retracted position, said legs also having end portions projecting inwardly below said base when the legs are in extended position, and clamping means operatively engaging said opposite end of said spike for releasably retaining said end portions of said legs against the under surface of said base.

2,469,193
PROTEIN FRACTIONATION
Edwin J. Cohn, Cambridge, Mass., assignor to Research Corporation, New York, N. Y., a corporation of New York
No Drawing. Original application February 9, 1942, Serial No. 430,075. Divided and this application November 15, 1945, Serial No. 628,975
8 Claims. (Cl. 260—112)



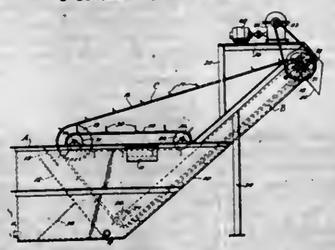
1. The method for the fractionation of proteins which comprises extracting a desired protein from a mixture of proteins in the solid state by immersing said solid mixture in a liquid mixture containing a limited amount of an organic precipitant for protein, and adjusting the temperature, the hydrogen ion concentration, the ionic strength, and the amount of said precipitant so that, of the said mixture of proteins, only the desired protein is soluble in said liquid mixture and the utility of the proteins which remain undissolved is not materially impaired.

2,469,194
REACTANCE TUBE CIRCUIT
Jean L. Deivaux, Paris, France, assignor to General Electric Company, a corporation of New York
Application July 16, 1947, Serial No. 761,326
In France December 12, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires December 12, 1962
5 Claims. (Cl. 332—28)



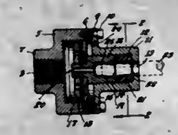
1. A reactance tube modulator comprising means for generating two voltages of opposed phase with a common predetermined nodal point, an electron discharge device with an anode, a cathode connected for alternating voltages to said point, and a control electrode, means for applying one of said voltages to said anode, means for applying a voltage substantially in quadrature with said one voltage to said control electrode, means for deriving from the other of said two voltages a correcting voltage and for applying said correcting voltage to said control electrode whereby conduction of in-phase anode current by said discharge device is minimized, and means for applying a modulating voltage to control the intensity of current conducted by said device.

2,469,195
COOLANT RELIEF VALVE
Jesse E. Eshbaugh, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 5, 1946, Serial No. 694,948
9 Claims. (Cl. 236—92)



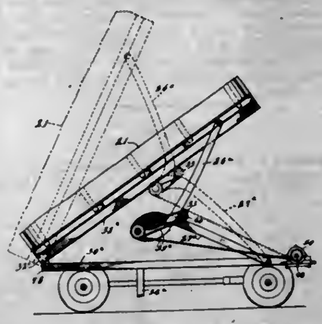
4. In a relief valve for a closed pressure system, a pair of outwardly opening pressure relief valves arranged in series relation, an expansible-contractible device interposed between said valves and responsive to both system temperature increase and atmospheric pressure decrease to expand, said device in its normally contracted condition being arranged to provide operating clearance between said valves and upon predetermined expansion to take up the clearance space between and to engage with both valves as a strut therebetween and by-pass means around the outermost valve cooperating with said clearance space so as to be fully open upon device contraction and to be blocked by device expansion.

2,469,196
MAGNETO MAGNET
Harry Goldberg, Chicago, Ill., assignor, by mesne assignments, to Pioneer Gen-E-Motor Corporation, Chicago, Ill., a corporation of Delaware
Application January 4, 1946, Serial No. 639,128
2 Claims. (Cl. 171—209)



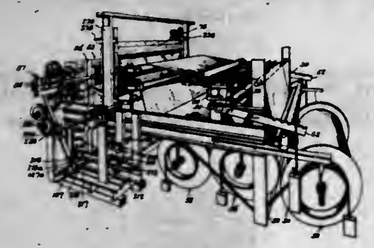
1. In combination, a fly wheel of non-magnetic cast metal having a laterally projecting flange, a one piece bar magnet embedded in cast relationship within the inner face of the flange, there being two cylindrical pole faces on one side of the bar magnet one adjacent each end thereof, said faces being exposed in the inner periphery of the flange and of substantially greater area than the cross-sectional area of said magnet intermediate its ends, a bridge cast integral with the flange extending across the body of the magnet between and separating the pole faces, the width of the bridge being substantially greater than its radial thickness.

2,469,197
SEPARATING APPARATUS
Clarence C. Hermann, Grosse Pointe Park, Mich., assignor to Claude B. Schneible
Application December 29, 1945, Serial No. 638,288
8 Claims. (Cl. 210—55)



1. In separation apparatus, a tank adapted to receive liquid containing solids which in part tend to settle and in part tend to float on the liquid, said tank having an inclined wall leading from the bottom to the top of the tank, means for introducing liquid containing solids into the tank, an endless conveyor supported for movement in spaced relation with said wall, means carried by said conveyor and adjacent said wall for moving submerged solids up said wall as the conveyor is advanced, means for moving the conveyor, means for moving the floating material in said tank to a position where it will be engaged by said conveyor means as it emerges from the liquids, means for moving said last-mentioned means, and means for removing clarified liquid from the tank.

2,469,198
AIR CHUCK
Raymond E. La Pointe, Hartford, Conn., assignor to The Bush Manufacturing Company, Hartford, Conn.
Application March 23, 1946, Serial No. 656,610
6 Claims. (Cl. 279—4)

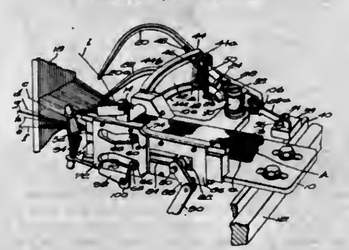


2. A chuck of the character described comprising a body having a chamber therein, a piston slidable in said chamber, a resilient sleeve, a plunger operatable by said piston for compressing said sleeve, an opening in said body in alignment with the interior of the sleeve, and means for admitting pressure against said piston to cause compression of said sleeve for reducing the inside diameter thereof.

2,469,199
LIFTING APPARATUS
George F. Lewis, Streator, Ill.
Application March 23, 1946, Serial No. 656,556
5 Claims. (Cl. 298—19)

1. A device for raising a vehicle body from a chassis portion comprising: a pair of curved arms arranged in vertical relationship and pivoted together adjacent one end the opposite end of the upper arm being pivoted to the chassis portion adjacent the front end thereof and the opposite end of the lower arm being pivoted to the vehicle body adjacent the front end thereof in such manner as to cross said arms intermediate the ends thereof, a spreader device interposed between said arms intermediate the point of crossing and the points of pivot to the said chassis and body, and apparatus for actuating said spreader device.

2,469,200
HARNESS MOTION FOR LOOMS
Paul Matweeff, Uncasville, Conn.
Application September 11, 1946, Serial No. 696,689
11 Claims. (Cl. 139—77)

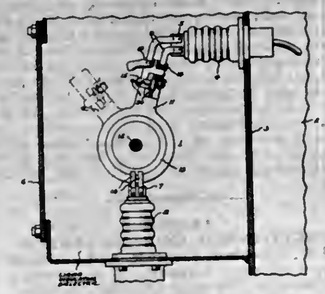


1. In a loom, a harness motion comprising a plurality of reciprocatory frames, a mutilated operating cylinder gear normally rotated in one direction at substantially constant speed, means for adjusting said frames comprising slide plates respectively connected to said frames and adjusting gears eccentrically connected to said plates, means comprising a pattern chain for moving said adjusting gears to an operative position for meshing with said operating gear and an inoperative position clear thereof, said adjusting gears respectively having enlarged locking teeth and said operating gear having a flat thereon disposed to clear the locking teeth of said adjusting gears and a groove adapted for reception of said locking teeth, means cooperating with said locking teeth for locking in adjustment the adjusting gears while enabling release by partial rotation thereof of those adjusting gears which are in operative position, and driving connections between said operating gear and said chain effective for driving the latter at accelerated speed when said operating gear is out of mesh with the adjusting gears in operative position and at reduced speed when said operating gear is in mesh with said latter adjusting gears.

2,469,201
DOOR LATCH
Anders P. Mikkelsen, Pleasantville, N. Y.
Application November 9, 1946, Serial No. 708,952
6 Claims. (Cl. 292—252)

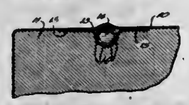
1. In a latch for a door or window casing, having a pair of hinged closure members adapted to swing to closed position with their inner edges adjacent and in close proximity to each other, said latch device comprising a tube mounted in a corner of one door and having one end opening through the bottom of the corner and another end opening through the inner edge of the door adjacent the inner edge of the adjacent door, a plurality of balls in said tube, slightly greater in diameter than the diameters of the openings at the ends of the tube, said balls being so dimensioned that when one end ball in the tube is pushed in substantially flush with the end of the tube at which the said ball is positioned by the inner edge of the adjacent door, the ball at the other end will be partially pushed out of the tube, and a seat for receiving a portion of the ball so pushed out of the end of the tube.

2,469,202
LOOM ATTACHMENT FOR WEAVING LADDER WEBBING
Frederick D. Murdock, Barrington, and John A. De Angelis, Cumberland, R. I., assignors to Harry Dexter Peck, Providence, R. I.
Application May 1, 1948, Serial No. 24,646
4 Claims. (Cl. 139—124)



1. An attachment for looms having stationary weft supplies and adapted to weave ladder web, a pair of thread arms for carrying weft threads back and forth through separate sheds of warp threads, a pair of reciprocally movable needles arranged to operate with said thread arms, cam means associated with said thread arms, for causing said arms to move toward one another as they carry the weft threads in one direction through the sheds and to move away from one another as they carry the weft threads in the other direction through the sheds, and other cam means associated with said needles for causing said needles to move away from one another as they move forward into cooperative action with said thread arms to bring the eye of each needle between a thread arm and the weft thread carried thereby.

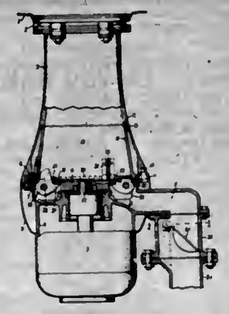
2,469,203
ELECTRIC SWITCH
Arthur Palme and Orin P. McCarty, Pittsfield, Mass., assignors to General Electric Company, a corporation of New York
Application December 4, 1945, Serial No. 632,735
8 Claims. (Cl. 200—146)



1. In a switch, a pair of relatively movable cooperating contact members including a stationary contact and a movable blade, an insulating support on said blade, a vacuum switch mounted on said insulating support comprising a pair of interrupting contacts enclosed by an evacuated envelope having a flexible metallic diaphragm as a wall portion thereof, an actuating member extending through said diaphragm for operating said interrupting contacts from outside said envelope, a conducting cam surface associated with said stationary contact, a conducting member pivoted to said insulating support and electrically connected to said blade through said

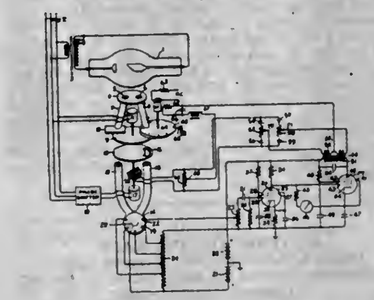
arcing contacts so as to complete a circuit in parallel with said contact members when said conducting member engages said cam surface, and means on said cam surface for causing move-

ment of said conducting member to open said interrupting contacts and interrupt the current which has been transferred from said contact members to said interrupting contacts.



2,469,204
PACKAGE WRAPPER
Leo Peters, Evanston, Ill., assignor, by mesne assignments, of two-thirds to Leo Peters and one-third to Helen M. Peters, both of Evanston, Ill.
Application March 1, 1946, Serial No. 651,319
5 Claims. (Cl. 99—171)

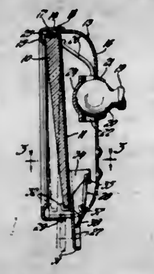
1. A package wrapper comprising a translucent web of flexible material suitable for kneading oleomargarine therein, said wrapper being adapted to be sealed about a body of oleomargarine, a perforated flexible strip secured to an inner wall of said web, and a frangible capsule held between said perforated strip and said inner wall of the web, said capsule containing coloring matter and the perforations of said strip being of a size to permit the flow of said coloring matter, when the capsule is broken, into said oleomargarine while confining the shell of said capsule.



2,469,205
WASTE DISPOSAL APPARATUS
James H. Powers, Westport, Conn., assignor to General Electric Company, a corporation of New York
Application December 28, 1945, Serial No. 637,529
5 Claims. (Cl. 146—192)

1. In a waste disposal apparatus, a wall which defines a waste receiving chamber having shredding means on its inner surface, a flywheel in the chamber having at its periphery impeller blades which cooperate with the shredding means, walls defining passages in the chamber wall at the periphery of the flywheel for conveying comminuted material from above to below the flywheel, a discharge conduit, a motor for rotating the flywheel, a plate in the discharge conduit biased to a position where it stands in the path of flow through such conduit, switch means operated by movement of said plate away from such path of flow for controlling the motor, and walls which define passage means separate from said

first named passages for conveying water from the chamber to said discharge conduit.

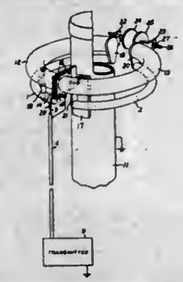


2,469,206
X-RAY ABSORPTION PHOTOMETER
Theodore A. Rich, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application November 14, 1946, Serial No. 709,861
6 Claims. (Cl. 250—83.3)

5. An apparatus for comparing the absorption of X-rays by two specimens comprising a source of X-rays, means for directing a portion of the X-rays from said source through a specimen to be analyzed and a second essentially similar portion of the X-rays through a second specimen, a graduated adjustable absorption member adapted for movement intercepting the X-rays through one of said specimens, a rotatable fluorescent screen adapted to intercept unabsorbed X-rays passing through one specimen by one portion thereof and the unabsorbed X-rays through both the other specimen and said adjustable absorption member by another non-coincident portion thereof, driving means therefor, a phototube, an enclosure for said phototube allowing its actuation only by light produced by said fluorescent screen, shutter means for alternately exposing said phototube to light from one portion of said fluorescent screen and to light from another portion of said screen, driving means therefor, means responsive to phototube current for positioning said adjustable absorption member for equal illumination

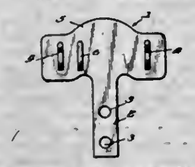
of said two portions of the fluorescent screen, and means responsive to position of said adjustable absorption member for indicating its position.

2,469,207
SPRING MOUNTED TWO-POSITION PRISMOIDAL REAR-VIEW MIRROR
Gordon E. Roedding, Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application October 12, 1946, Serial No. 702,900
14 Claims. (Cl. 88—98)



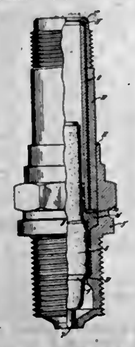
1. In a mirror, a housing consisting of a front frame section and a rear section, opposed recesses in both sections providing an aperture, a member which includes a low efficiency reflecting surface disposed in front of and at an angle to a high efficiency reflecting surface mounted in the housing so that it can pivot about an edge, means pivoting said member to the housing, means engaging said member and extending through the aperture in said sections, a spring seat attached to said means, spring means under compression positioned between said spring seat and said housing to hold said engaging means on the member and said member in contact with the pivot means.

2,469,208
CLOTHES-DRYING RACK
James Gilbert Rothrock, Everett, Wash.
Application October 25, 1945, Serial No. 624,393
2 Claims. (Cl. 211—100)



1. In a clothes drying rack, a relatively deep receptacle of narrow thickness from front to rear and having substantially parallel front and rear walls and having a bottom wall; a horizontal fulcrum member carried by the upper edge portion of the front wall of said receptacle; horizontal clothes bar holding means carried by the rear wall of said receptacle and extending toward said fulcrum member above the level of said fulcrum member and having downwardly opening clothes bar positioning notches; and clothes bars each having a neck portion of narrower width than the bar near the inner end of the bar and a terminal head portion wider than said neck portion inwardly of said neck portion, whereby when said neck portions are positioned in said notches said bars will be held against endwise movement and will be supported in extended positions by said clothes bar holding means and said fulcrum member, said bars being readily movable into upright positions with the inner end portions of the bars resting on the bottom wall of the cabinet and the major portions of the bars disposed within the cabinet and the outer end portions of the bars extending above the clothes bar holding means.

2,469,209
SINGLE-ENDED ANTENNA SYSTEM
Marvel W. Scheldorf, Syracuse, N. Y., assignor to General Electric Company, a corporation of New York
Application April 19, 1946, Serial No. 663,318
4 Claims. (Cl. 250—33)



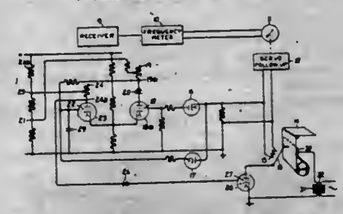
1. A single-ended antenna system comprising a pair of parallel, similarly oriented, circumferentially incomplete, loop-like conductors, each of said conductors having a pair of spaced ends, corresponding spaced ends of said pair of conductors being conductively connected together, one of said pair of conductors having a pair of terminals at a point mid way between said spaced ends, one of said terminals being conductively connected to the other of said conductors, input means connected to the other of said terminals, said one terminal being connected to ground, whereby signal voltages may be impressed between said input terminal and ground, and a capacity coupling between said spaced ends.

2,469,210
CARD SUPPORT AND DISPLAY
Edward L. Schwab, Chicago, Ill.
Application August 14, 1947, Serial No. 768,588
1 Claim. (Cl. 248—1)

In a card supporting display device, the combination of a body portion, a pair of spaced clip members extending therefrom for engaging and holding the rear leaf of a folded card positioned between said clips, the body portion having a pliant member in the form of a relatively narrow strip having a pair of spaced holes therein extending from an edge thereof and being bent intermediate said holes to permit the insertion of a rod through said holes and adjustably support the body portion thereby, said strip being adapted to be bent relative to the body portion to arrange and maintain the body portion and strip at various angles relative to each other, and a projection spaced outwardly from the face of said body portion and from said clip members, said projection being laterally positioned intermediate said clip members and adapted to engage and maintain the front leaf of a folded card supported by the device, in partially open position with respect to the rear leaf thereof.

2,469,211
SEALING MEANS AND METHOD FOR SPARK PLUGS
Karl Schwartzwalder, Holly, and Carl F. Schaefer, Flint, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application August 25, 1944, Serial No. 551,118
7 Claims. (Cl. 123—169)

2. A spark plug comprising a metallic shell, an insulator of ceramic material within said shell and spaced therefrom, an impervious mass of vitreous material in said space at the sparking end of the plug and completely sealing the insulator in the shell, said mass being a mixture of approximately 5 to 15 per cent of mica in lamellar form and 85 to 95 per cent of low-fusing glass, the mixture being solid and inert at temperatures normal to the use of spark plugs but being readily flowable under pressure at temperatures approximately between 400 and 500° C.



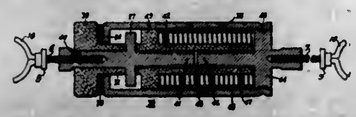
2,469,212
TEMPERATURE-REGULATING VALVE MECHANISM FOR HEAT-EXCHANGE DEVICES
Joe C. Shaw, Racine, Wis., assignor to Young Radiator Company, Racine, Wis., a corporation of Wisconsin
Application December 4, 1946, Serial No. 713,966
4 Claims. (Cl. 236—34)

1. A fluid temperature-regulating valve mechanism comprising, a housing adapted for attachment to a heat-exchange unit having dual fluid flow paths, said housing having a main fluid inlet and a main fluid outlet, said housing also having an auxiliary fluid outlet for communication with a common inlet to the dual fluid flow paths in said heat-exchange unit and auxiliary inlets for communication with the fluid outlets for the dual fluid flow paths of said heat-exchange unit, said housing being divided interiorly by transverse partitions into a plurality of chambers which communicate radially of said housing, one with said housing main inlet, another with said housing auxiliary outlet, and two others respectively with the housing auxiliary inlets, said partitions having openings formed therein affording communication axially of said housing between the chambers on opposite sides of a respective partition, poppet valve mechanism movable axially of said housing and coacting with valve seats on certain of said partitions opening to control the flow of fluid be-

tween said housing main inlet and said housing main outlet either directly through said partition openings or indirectly through said heat-exchange unit, a thermostat connected to actuate said valve mechanism and mounted in said housing for exposure to the fluid flow through said housing main outlet in advance of the discharge of the fluid therefrom whereby the temperature of the fluid determines the flow path thereof through said housing, and slide valve members co-acting with said housing for controlling communication through said housing auxiliary inlets, said slide valve member being connected to said thermostat so that the actuation of said slide valve member is synchronized with the actuation of said poppet valve mechanism whereby the closing and opening of said housing auxiliary inlets occurs simultaneously with the opening and closing respectively of communication between said housing main inlet and outlet directly through said housing.

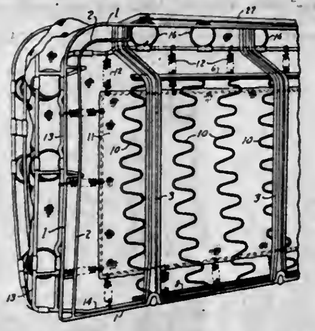
2,469,213
RECORDING SYSTEM
Richard F. Shea, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application March 20, 1944, Serial No. 527,187
7 Claims. (Cl. 346—33)

1. In a recorder for producing substantially continuous records of a plurality of quantities, means for receiving successive series of impulses, the series being made up of separate impulses corresponding to the respective quantities, said



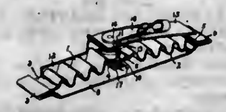
receiving means having an element movable to positions corresponding to the respective impulses, a stylus for marking a record, a deflecting coil for the stylus, means for providing a voltage in the coil deflecting the stylus to a position corresponding to the instantaneous position of the element, and means responsive to the voltage in said coil for interrupting the marking by the stylus until the position of the stylus corresponds to the position of the element.

2,469,214
CENTRIFUGAL COMPRESSOR
Sanford A. Shuler, Jr., Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application March 19, 1946, Serial No. 655,517
3 Claims. (Cl. 230—130)



1. In a multi-stage centrifugal pump having a single inlet low pressure impeller and a single inlet high pressure impeller mounted coaxially in adjacent back-to-back relation, walls defining a first discharge scroll surrounding the low pressure impeller and having an exit directed tangentially and with a cross-section of a width substantially equal to the height thereof, walls defining an annular inlet chamber for the high pressure impeller, and walls defining an interstage passage connecting the exit of the first stage scroll to said second stage inlet chamber, said passage having adjacent the first stage exit a portion forming a first bend of substantially 90 degrees to turn the fluid discharged from said exit to a direction substantially parallel with the axis of the compressor and a second portion defining a second bend of substantially 90 degrees to conduct the fluid to said inlet chamber, said interstage passage having a cross section which gradually decreases in area and simultaneously transitions to a progressively more elongated shape with a major axis extending in a direction substantially normal to the planes of the respective bends, whereby the rapidly flowing fluid is caused to fill the passage without separation from the inside walls of the bends.

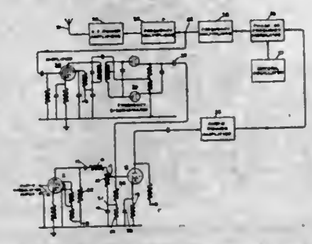
2,469,215
PROTECTIVE DEVICE
Sidney R. Smith, Jr., Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application September 9, 1944, Serial No. 553,365
1 Claim. (Cl. 200—118)



A control device for shunting an electrical circuit or device in response to a predetermined overvoltage comprising a pair of terminals adapted to be connected in shunt with said electrical circuit or device, a conducting housing electrically connected to one of said terminals, a conducting member within said housing connected to said other terminal, means biasing said conducting member into conducting engagement with said housing, and means comprising a frangible member restraining said last mentioned means including a gap mounted within said frangible member and connected across said terminals, said gap being so constructed and arranged as to arc over in response to a predetermined overvoltage across said terminals to cause disintegration of said frangible member and engagement of said conducting member with said housing.

2,469,216
SUSPENSION SPRING SEAT
Leo Spunt, Detroit, and Bruce A. Gould, Highland Park, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application November 9, 1946, Serial No. 708,970
12 Claims. (Cl. 155—179)

12. A spring seat construction, having in combination a substantially rectangular bottom frame, a plurality of upwardly-arched sinuous wire springs extending crosswise of the frame, a spring-suspended hammock or sling suspended from the frame and extended over the arches to cooperate with the arches for yieldably supporting the load, the said hammock or sling comprising webbing and tension springs suspending the webbing from the sides of the frame.



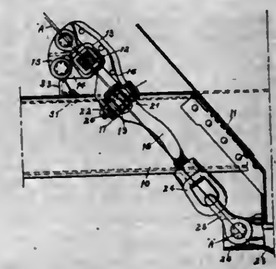
2,469,217
SNAP-ACTION THERMOSTATIC SWITCH
Henry C. Sway, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application April 17, 1946, Serial No. 662,895
3 Claims. (Cl. 200—138)

1. A snap acting thermostat comprising a pair of elongated bi-metallic strips transversely corrugated for at least a portion of their lengths and positioned end to end and pivoted together

at their juxtaposed ends, whereby said strips while undistorted have a common longitudinal axial plane, a frame having spaced arms, means rigidly clamping the free ends of said strips to said arms, at least one of said clamping means holding the end of its respective strip at an acute angle to said axial plane and the distance between said clamps being less than the combined lengths of said strips in said plane between said clamping means, whereby said strips are longitudinally compressed and tend to be bowed out of said plane, stop means secured to said frame for limiting transverse motion of said strips on both sides thereof, said stop means being positioned close enough to said strips to maintain the strips in compression in both extreme limits of motion, and contact means adapted to be opened and closed by transverse motion of said strips.

2,469,218
NEGATIVE FEED-BACK TRANSMISSION SYSTEM
Henry P. Thomas, Fayetteville, N. Y., assignor to General Electric Company, a corporation of New York
Application April 30, 1947, Serial No. 744,845
9 Claims. (Cl. 332—18)

1. In a transmitter of angularly-modulated high frequency waves, a source of modulation signals extending over a relatively low-frequency band, a signal translation channel having an input connected to said source and having an output, said channel including means for generating said high frequency waves and modulating them in accordance with said signals, means for demodulating said angularly-modulated waves at said output to develop demodulated signals, a frequency-selective network having an inverse gain-frequency characteristic over said band, means for feeding back said demodulated signals through said network to said input in degenerative phase, whereby the relative degree of modulation at said output is increased at higher modulation frequencies, and a second frequency-selective network in the connection between said source and said input including a coupling impedance across said input common to both said networks, said second network having a correlated gain-frequency characteristic which substantially restores the relative degree of modulation at said output to the value without feedback.



2,469,219
PIN SPOT MARKER FOR BOWLING ALLEYS
William White, Newark, N. J.
Application February 3, 1948, Serial No. 5,916
5 Claims. (Cl. 273—52)

1. A pin spot device for bowling alleys comprising a socket element having an upwardly open, downwardly and inwardly tapered socket bounded by radially split side walls, and an inverted conical core within said socket having a screw-threaded connection with the bottom of the socket element, whereby rotation of the core in

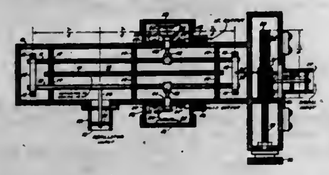
down moving direction relative to the socket element expands the split side walls of the latter into frictionally bound anchoring engagement with the walls of an opening in an alley provided for the reception of said socket element.

2,469,220
DOOR OPERATING MECHANISM FOR DUMP CARS
Albert E. Zimmer, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application July 18, 1946, Serial No. 684,587
3 Claims. (Cl. 105—299)

1. In a door operating mechanism for dump cars having a hinged bottom door, a rotary lifting shaft supported on the car, a radial arm on said shaft, and link means inter-connecting the door with and pivotally connected to the radial arm, the improvement which comprises a stop member located in the path of rotary movement of the radial arm in a position adjacent the point where the pivotal connection between the link means and the radial arm is located when the door is in closed position whereby over-winding of the link means and resulting damage to the operating parts are prevented.

2,469,221
SLIDE RULE ACCESSORY
Joseph G. Adiletta, New York, N. Y.
Application August 28, 1945, Serial No. 613,186
2 Claims. (Cl. 235—70)

1. An accessory for maintaining a double-faced slide rule in elevated state upon a table for manipulation of the slide rule in said state, compris-



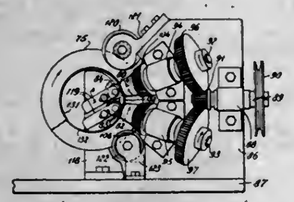
ing a pair of members each having the combination of a lower fixture for elevatingly supporting the slide rule to present one face thereof in an operative condition, an upper fixture for similarly supporting the slide rule for similarly presenting its opposite face, a spring joining said fixtures, said spring drawing said fixtures toward each other for grippingly holding the slide rule and for removal of the member from the slide rule, and said members being mountable upon and demountable from the marginal end portions of the slide rule.

2,469,222

CRYSTAL RECTIFIER CONVERTER

John B. Atwood and Bertram Trevor, Riverhead, N. Y., assignors to Radio Corporation of America, a corporation of Delaware

Application December 1, 1943, Serial No. 512,442
10 Claims. (Cl. 250—20)



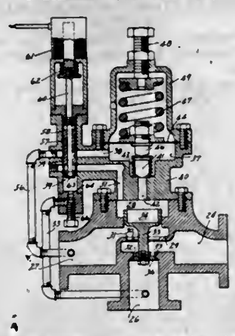
10. A converter circuit including a pair of parallel conductors connected together at each end and an outer casing enclosing said conductors, a conductive wall between said conductors and connected to said outer casing, means for applying wave energy of one frequency between said line conductors and said outer casing, means for applying wave energy of another frequency to said line conductors in a push-pull relationship and rectifying means connected in symmetrical relationship from corresponding high potential points on said conductors to an output circuit.

2,469,223

APPARATUS FOR USE IN MAKING PRE-COILED HELICAL FINS

Ernest Bruegger, Massillon, Ohio, assignor to The Griscom-Russell Company, New York, N. Y., a corporation of Delaware

Original application September 8, 1944, Serial No. 553,153, now Patent No. 2,437,500, dated March 9, 1948. Divided and this application March 15, 1947, Serial No. 734,961
4 Claims. (Cl. 153—29)



1. In apparatus for forming an L-shaped foot along the inner edge of an edgewise wound helically coiled metallic ribbon, in combination, a pair of frusto-conical rollers, means for rotatably mounting said rollers with their conical surfaces parallel and closely adjacent each other at one point in their rotation, a rotary member having a cylindrical surface closely adjacent the smaller end faces of said rollers and extending across the space between said rollers at said closely adjacent point, means for rotating said rollers at the same speed and in opposite directions a peripherally extending shoulder projecting outward from the conical work engaging surface of one of said rollers and means for guiding an edgewise wound helically coiled metallic ribbon between said rollers with its inner edge portion protruding beyond the smaller end faces of said rollers whereby said edge portion is bent laterally by said cylindrical surface.

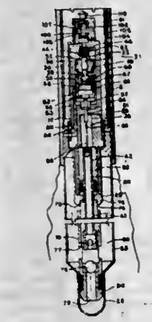
2,469,224

COMPRESSOR UNLOADER

William P. Caine, Birmingham, Ala.

Application February 4, 1946, Serial No. 645,382
9 Claims. (Cl. 230—24)

6. In apparatus of the character described including a fluid compressor having an intake conduit and a discharge conduit, the latter delivering compressed fluid into a receiver, an unloader interposed in the discharge conduit between the compressor and the receiver and comprising a housing communicating with the compressor, there being a conduit in the housing communicating with the compressor intake and discharge conduits and the receiver, a differential piston and cylinder therefor disposed within the housing and normally subject to receiver pressure between its ends, a valve controlling communication between the compressor discharge and intake conduits carried by the smaller end of the differential piston, a second valve controlling communication between the receiver and the compressor discharge on the larger end of the differential piston, and other valve means operable responsive to receiver pressure for admitting fluid from the receiver into the cylinder at the outer, larger end of the differential piston.



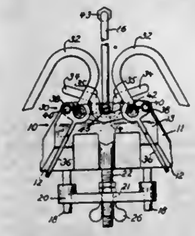
2,469,225

MEANS FOR FLOWING WELLS

Oscar E. Dempsey, Tulsa, Okla., assignor to Dempsey Pump Co., Tulsa, Okla., a corporation of Oklahoma

Application February 4, 1946, Serial No. 645,305
11 Claims. (Cl. 103—46)

1. In an apparatus for lifting fluid from a well including a filling chamber, means for introducing constantly maintained motive pressure fluid into the filling chamber for displacing the fluid emitting therein from the production strata, means for receiving the displaced fluid, means actuated by the motive pressure fluid to move the first mentioned means to a position preventing introduction of motive fluid into the filling chamber and permitting exhaust of residue motive fluid therefrom, said last mentioned means including a piston responsive to previ-



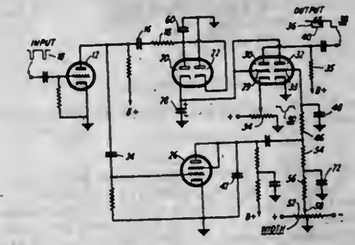
ously displaced well fluid disposed above the piston to provide a snubbing action to limit the actuation of the said means until substantially all the production fluid in the filling chamber is displaced, and means independent of the first mentioned means and responsive to the hydrostatic head of well fluid in the receiving means for introducing motive fluid thereto to slug the well fluid to the top of the well.

2,469,226

COLLAR CLAMPING APPARATUS

Harry D. Forse, Anderson, Ind.

Application May 9, 1946, Serial No. 668,407
8 Claims. (Cl. 223—52.1)



1. In a garment press, a buck having a padded upper surface, a supporting plate adjustably secured to said buck remotely of the padded surface thereof, a collar clamp having a neck band receiving form, means adjustably securing said collar clamp to said supporting plate, said adjustable securing means being located to be operably adjusted when said press is in pressing or non-pressing position, a pair of members mounted for operable movement relative to said form, each of said members being provided with a portion adapted to be moved to and from engagement with said form, and mechanical means for moving said members from said form engaging position.

2,469,227

ELECTRONIC WAVE GENERATING METHOD AND MEANS

Robert M. Fraser, Baldwin, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application January 30, 1946, Serial No. 644,201
15 Claims. (Cl. 250—27)

14. In a wave-generating system in which a series of synchronizing pulses control the production of an output voltage variation of substantially rectangular waveform, the leading edge of each cycle of the voltage variation being constant with respect to the leading edge of a synchronizing pulse, and the width of each cycle of the voltage variation being a selected percentage of the period of the synchronizing pulses, the method which comprises initiating a current flow in response to the reception of said synchronizing pulses, generating a current wave of substantially saw-tooth configuration under the control of said synchronizing pulses, the period of said saw-tooth current wave coinciding with the period of said synchronizing pulses, integrating said saw-tooth current wave, and applying said integrated saw-tooth current wave to terminate cyclically said current flow.

2,469,228

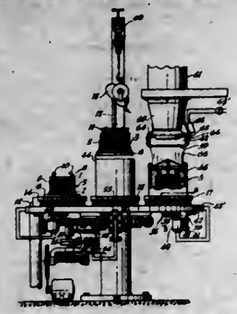
INSECT REPELLENT

Samuel I. Gertler, Washington, D. C., dedicated to the free use of the People in the territory of the United States

No Drawing. Application February 18, 1946, Serial No. 648,551
1 Claim. (Cl. 167—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

An insect repellent comprising benzyl ether as the essential active ingredient incorporated into zinc oxide.

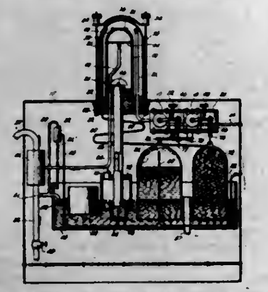
2,469,229



APPARATUS FOR PREPARING BUNGS OF CERAMIC WARE FOR FIRING

Robert E. Gould, Hamburg, N. Y., assignor to Buffalo Pottery Incorporated, Buffalo, N. Y., a corporation of New York

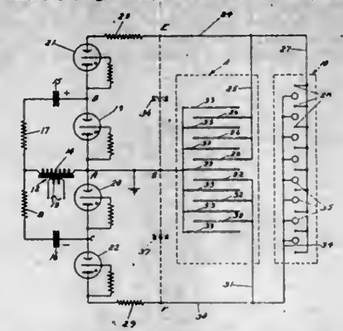
Application October 14, 1944, Serial No. 558,753
19 Claims. (Cl. 259—72)



1. The process of preparing bungs of ceramic ware for firing which comprises, fluffing a light,

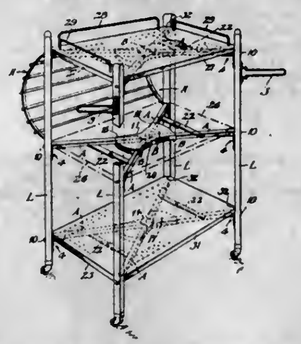
powdery, compactible bedding medium as the medium is placed around the bung and shaking

some of the medium into the spaces between the articles.



2,469,230
AUTOMATIC APPARATUS FOR FEEDING LIQUID OR GASEOUS MATERIALS
Elmer E. Harper, Monrovia, Calif.; Esther Pardee Harper executrix of Elmer E. Harper, deceased
Application January 18, 1945, Serial No. 573,415
11 Claims. (Cl. 222—58)

1. Apparatus for the gravimetric feeding of liquid or gaseous materials, comprising a receptacle containing the material to be handled and provided with a discharge outlet, a vacuum-actuated device provided with a fluid pressure control connection and also with mechanical control connections for regulating the flow through said discharge outlet, scale mechanism supporting said receptacle, and means responsive to fluctuations in said scale mechanism for automatically controlling said fluid pressure connection.

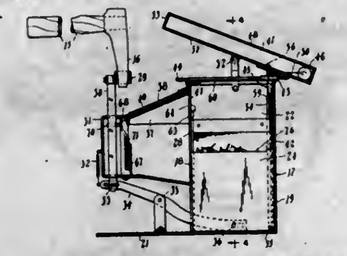


2,469,231
ELECTRICAL PRECIPITATOR
Hans Klemperer, Belmont, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 20, 1946, Serial No. 678,153
12 Claims. (Cl. 183—7)

1. An electrical precipitator for purifying gas comprising an ionizing device including a plurality of electrodes between which an ionizing discharge is adapted to occur, a precipitating means including a plurality of spaced, parallel collector plates upon which impurities in said gas are collected, means for charging a portion of said plates to a predetermined potential relative to ground, means for charging another portion of said plates to a potential in the opposite polarity relative to ground, means for deriving a po-

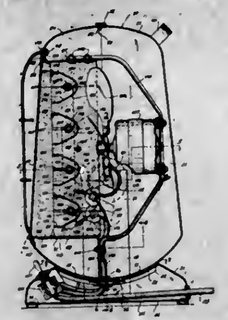
tential substantially equal to the combined potential across said two portions of said collector plates, and means for applying said derived potential across said ionizing electrodes.

2,469,232
UTILITY STAND
Benjamin H. Kennedy, Pittsford, N. Y.
Application October 20, 1945, Serial No. 623,495
5 Claims. (Cl. 211—178)



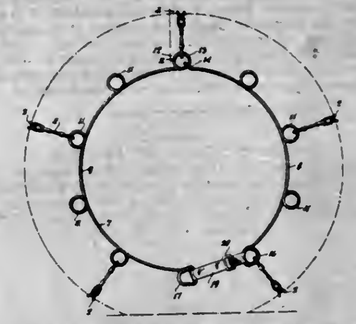
1. A utility stand which comprises a plurality of upright supporting legs, a plurality of X-braces each brace consisting of a hub having diagonally extending arms, each arm being pivotally connected to said hub at its inner extremity and to a supporting leg at its outer extremity, said X-braces providing means by which the supporting legs are folded or unfolded together in pairs, a plurality of removable shelves arranged to be supported by the arms, and means at the corners of each shelf for engaging the arms of the X-braces to secure the legs in their unfolded positions.

2,469,233
AUTOMATIC TACK DISPENSER
Eustace Kozachuk, Toronto, Ontario, Canada
Application December 2, 1946, Serial No. 713,600
13 Claims. (Cl. 1—49.6)



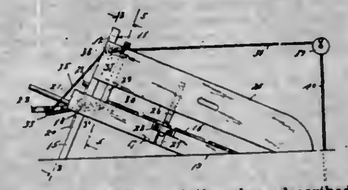
1. A tack dispenser for use with a hammer having a magnetic strike end, comprising a container

for tacks having front and rear walls and a gapped bottom wall, a feeder device disposed beneath the container for movement between raised and lowered positions, said feeder device having an upper end in the gap of said bottom wall forming a lift surface for tacks which is provided with a vertical slot receptive to the body portion of tacks so that the heads thereof may ledge on said lift surface, a chute extending outwardly of the upper part of said container and having a slot passage for tacks for receiving and



containing them in substantially upright position, a pusher device having a finger for pushing tacks along said lift surface into said slot passage of the chute when the feeder device is in a raised position, means for actuating said pusher device, a depressible device adapted to be actuated by the strike end of a hammer, a receiver for receiving tacks singly from the chute and enabling them to be attached magnetically to the strike face of the hammer by depressive movement of said depressible device, and means by which such depressive movement raises said feeder device.

2,469,234
FAN TYPE HEATER
Caryl A. Lindberg, Glendale, and Howard W. Eckles, St. Louis, Mo., assignors to The Emerson Electric Manufacturing Company, St. Louis, Mo., a corporation of Missouri
Application October 13, 1945, Serial No. 622,218
26 Claims. (Cl. 219—39)

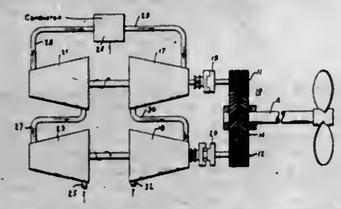


12. In a heater, a sheet material casing section having an air opening therethrough, material from the opening being bent backwardly therefrom at the bottom edge thereof, and downturned at its back and attached to the inside of the bottom surface of the casing, sheet material side and top walls connected with the backwardly bent material and forming therewith a duct, heating means mounted within the duct, and a blower attached to the duct, there being heat and electrically insulating liners for the side walls of the duct, a plurality of heating elements extending across from one liner to the other, a reflector device for each heating element, the reflector devices being spaced apart to provide air flow therebetween.

2,469,235
TRACTION DEVICE
Charles John Lindenthaler, Chappaqua, N. Y., assignor to Minute Skid Chain Corporation, Long Island City, N. Y., a corporation of New York
Application January 2, 1947, Serial No. 719,679
5 Claims. (Cl. 152—242)

4. In a device of the class described, the combination of a plurality of substantially semi-circular members, interconnecting apertured portions joining the ends of two of said members together to form a relatively loose joint, traction-improving means connected with one of said interconnecting apertured portions and adapted to extend across the periphery of a wheel, apertured connecting means extending outwardly from said semi-circular members at circumferentially spaced intervals, traction-improving means releasably connected with a plurality of said apertured connecting means and adapted to extend across the periphery of a wheel, apertured connecting means adjacent the free end of each of said semi-circular members, traction-improving means connected with one of said apertured connecting means and adapted to extend across the periphery of a wheel, and means for securing together the normally free ends of said semi-circular members to thereby retain said device on a wheel.

2,469,236
MINIATURE BOWLING APPARATUS
Sidney L. Long, Minneapolis, Minn.
Application August 17, 1945, Serial No. 611,192
7 Claims. (Cl. 273—127)

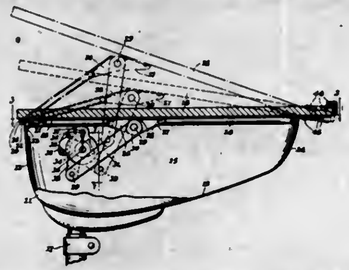


1. In an apparatus of the class described, a plurality of upright pins pivotally mounted to be

upset rearwardly when struck by a ball, and a ball-stopping grid back of the upright pins and through which grid the pins extend when upset.

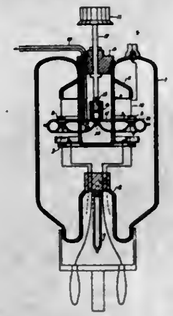
2,469,237
ELECTROLYTIC SEALING OF ANODIZED ALUMINUM SURFACES
James F. Mason, Glen Cove, N. Y., and Austin H. Beebe, Jr., Ann Arbor, Mich., assignors to Reynolds Metals Company, Inc., Richmond, Va., a corporation of Delaware
No Drawing. Application October 25, 1945, Serial No. 624,608
2 Claims. (Cl. 204—58)

1. In sealing anodized aluminum surfaces, the improvement which comprises anodically treating the anodized aluminum surface in an aqueous solution of sodium phosphate having a pH of about 4.1–5.0 at a temperature of about 65°–85° C. with a current density of about 1–2 amperes per square foot of anodized surface until sealed.



2,469,238
GAS TURBINE APPARATUS
John S. Newton, Havertown, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 28, 1947, Serial No. 771,108
3 Claims. (Cl. 60—102)

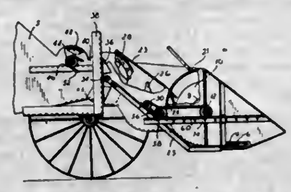
1. In a propulsion power plant, a rotatable propulsion mechanism, forward and reversing turbines rotatable in opposite directions, clutches for connecting either turbine to the propulsion mechanism, compressors driven by the turbines, a combustor supplied with fuel, means for conducting air from the atmosphere through the compressors in series to the combustor to support combustion of fuel therein and to admix with the resulting products of combustion to form motive fluid, and means for conducting motive fluid from the combustor first through the forward turbine and then through the reversing turbine before exhausting from the latter to the atmosphere.



2,469,239
DESK STRUCTURE
Walter E. Nordmark, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application November 24, 1947, Serial No. 787,651
6 Claims. (Cl. 45—91)

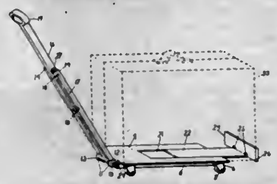
1. In a desk structure of the character described: an upwardly open top box and a cover therefor; means for mounting the cover on the top box whereby the front edge of the cover is pivotally associated with the upper front edge of the top box to permit swinging movement of the cover to a rearwardly-upwardly inclined elevated position; means for pivotally supporting the cover intermediate its front and rear edges when elevated as aforesaid, said last-mentioned means comprising a toothed wheel rotatably mounted on the top box, a link pivotally connected to the cover intermediate its front and rear edges and having an eccentric pivotal connection with the toothed wheel, and a pawl reciprocally mounted on the top box and adapted to engage behind a tooth of the wheel to restrain the wheel against rotating movement in a direction for lowering the cover; said front edge of the cover

being dissociable from the upper front edge of the top box to permit swinging movement of the cover about its pivotal connection to said link to a rearwardly-downwardly inclined elevated position; stop means preventing forward or rearward and consequent lowering movements of the cover when in said rearwardly-downwardly inclined elevated position; and means for disengaging the pawl from said tooth to permit lowering movement of the cover.



2,469,240
HOLLOW RESONATOR DISCHARGE DEVICE
Albert Frederick Pearce, Hampton Hill, England, assignor to Electric & Musical Industries Limited, Middlesex, England, a company of Great Britain
Application September 25, 1945, Serial No. 618,548
In Great Britain October 18, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires October 18, 1961
4 Claims. (Cl. 315—5)

1. An electron discharge device having an evacuated envelope provided with a tubular reentrant portion, a cavity resonator sealed through the walls of said tubular reentrant portion with a portion of the resonator within the evacuated envelope and another portion within said tubular

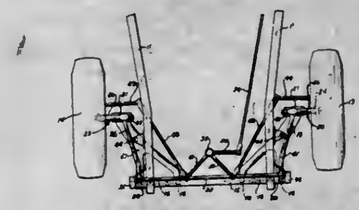


reentrant portion and external of said envelope, said cavity resonator being apertured in the portion within said envelope, means for directing an electron stream through said apertured portion and means for collecting said electron stream, said last two means being within said evacuated part of said envelope, a portion of the wall of said cavity resonator portion external of said evacuated envelope being flexible, and means for flexing said flexible wall portion for tuning said resonator.

2,469,241
ADJUSTABLE CUTTER AND FEEDER ASSEMBLY FOR HARVESTERS
Karl O. Peterson, Kansas City, Mo., assignor of one-half to Vaughn H. Doyle, Leonardville, Kans.
Application September 25, 1946, Serial No. 699,160
3 Claims. (Cl. 56—20)

3. A harvester apparatus comprising, in combination, grain cutting and grain feeding means including a rotary feeder beater member, thresher mechanism including a thresher cylinder in receiving relation to said feeder beater member, means for driving said thresher cylinder, framework supporting said cutting and feeding means and also journaling said feeder beater member, said framework being mounted for pivotal movement about the axis of said thresher cylinder, and driving means actuated by operation of said thresher cylinder for driving said grain cutting and feeding means.

2,469,242
COLLAPSIBLE LUGGAGE CARRIER
Elsa Pohl, New York, N. Y.
Application June 2, 1948, Serial No. 30,592
4 Claims. (Cl. 280—36)



1. A luggage carrier comprising a platform, wheels supporting said platform in a substantially horizontal position, a casing affixed to the lower side of said platform, extending along substantially the entire length of said platform and having a wall with a longitudinal slot, said casing being open at its front end, said slot being closed at the front end, a shaft fitting the inner space of said casing slidably, a pin affixed to said shaft near the rear end of the same and reaching into said slot, and a handle affixed to the front end of said shaft, said pin forming a hinge of said shaft when the latter is in its foremost position, the front end of said casing and the rear end of said shaft having shapes allowing, in said position, turning movement of said shaft relatively to said casing.

2,469,243
ADJUSTABLE AUTOMOBILE SEAT
Lawrence B. Rivard, Dearborn, and Russell J. McCarthy, Detroit, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application August 22, 1945, Serial No. 612,104
6 Claims. (Cl. 155—14)

1. In an adjustable vehicle seat, a substantially rectangular seat frame having a front and a back bar joined by a plurality of transverse members, a substantially U-shaped rear link intermediately connected to said rear bar and having pivotal mountings at its ends, the pivotal axes of said mountings being in alignment; a V-shaped front link member having pivotal mountings at its ends, the pivotal axes of said last-named mountings being in alignment and in substantial parallelism with said first named axes, a connection between said front link and said front bar including a gear sector carried by said front link and adapted to rotate therewith above said last-named axes, and co-operating rack means on one of said transverse members rising forwardly to elevate progressively the front of said seat frame as said front link is rotated to advance said seat, and locking means carried by said seat frame to secure said seat frame in various successive positions of adjustment.

2,469,244
INDEPENDENT FRONT WHEEL SUSPENSION
George D. Rowland, Dearborn, and Harold J. Morris, Wayne, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application June 10, 1946, Serial No. 675,513
4 Claims. (Cl. 280—124)

1. In a wheel suspension for a vehicle having a frame and a road wheel, a relatively heavy thrust arm of generally wishbone shape having its forward end bifurcated and pivotally mounted directly upon said frame at relatively widely spaced points for pivotal movement about a generally transversely extending axis, a wheel car-

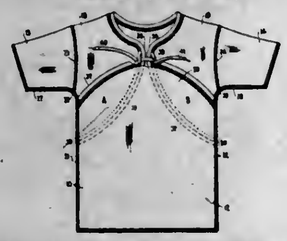
rier pivotally connected to the rearward end of said thrust arm and supporting said road wheel, a pair of vertically spaced transversely extending torsion bars each anchored to said frame at the side of the latter remote from said road wheel, one of said torsion bars being above said thrust arm and the other of said torsion bars being below said thrust arm, and a pair of generally parallel longitudinally extending suspension arms each connected at its forward end to one of said torsion bars and pivotally connected at its rearward end to said wheel carrier so that said torsion bars and suspension arms resiliently suspend said road wheel and said heavy thrust arm takes substantially the entire longitudinal and transverse thrust of said road wheel.

2,469,245

METHOD OF TREATING FABRICS AND RESULTING PRODUCT

Frank H. Russell, Needham, Mass., assignor to Pepperell Manufacturing Company, Boston, Mass., a corporation of Massachusetts

Application March 6, 1947, Serial No. 732,841
14 Claims. (Cl. 28—74)



2. Method of developing the structure and surface of a textile fabric, which comprises the steps of raising a nap upon the fabric, as a backing, with the nap fibers projecting outwardly therefrom and substantially parallel to each other, bending the free ends of the raised nap fibers inwardly toward the backing, and in interlocking arrangement with adjacent nap fibers, in such reversed position, and treating the nap with a liquid dispersion of a condensed polyvinyl ester.

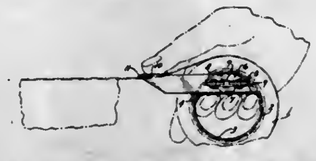
2,469,246

INFANT'S SHIRT

Emma A. Smicker, Allentown, Pa., assignor to Blossom Products Corporation, Allentown, Pa., a corporation of Pennsylvania

Application May 20, 1947, Serial No. 749,198
7 Claims. (Cl. 2—113)

1. An infant's shirt comprising a front portion, a rear portion attached to the front portion with side seams and extending up to the shoulder level of the shirt, two side flaps extending downwardly from said shoulder level and inwardly from said side seams, a front flap merged with said front portion at the upper part thereof, and sleeves attached to said rear portion and side flaps; said front flap having an upper convexly curved edge extending across the front of the garment and attached and hinged at said side seams; said side flaps being adapted to be brought into a predetermined closed position with their inner edges in opposed relation and forming a neck opening, the said inner edges containing opposed convexly curved edges extending from said neck opening downwardly and outwardly to said side seams and attached thereat, the said inner edges of the side flaps in the region of the neck opening being in adjacent relation when the flaps are in their closed position; the said front flap being adapted to be brought into a closed position in overlying relation to predetermined lower portions of the side flaps, the uppermost central edge portion of the front flap being adjacent said adjacent portions of the inner flaps when closed; an elastic loop attached to the front flap at the upper central portion thereof and coacting tie-strings at the innermost edges of the side flaps, said tie-strings being engageable with each other and with the elastic loop for securing together the said flaps when in their closed positions.



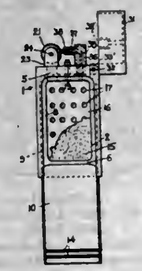
7. In a garment of the character described, a pair of side flaps which swing forwardly and inwardly toward each other into closed position, the leading edges of said side flaps being convex in shape and being in proximate spaced relation to each other when the flaps are in closed position, a front flap which swings upwardly and backwardly into closed position in overlying relation with respect to the two side flaps, the leading edge of said front flap being also convex in shape and intersecting the leading edges of the two side flaps in the region of their closest proximity, a pair of tie-strings fastened to the leading edges of said side flaps at the points of intersection with the leading edge of the front flap and a loop formed on the leading edge of the front flap at said intersecting points, said tie-strings being engageable with each other and with the loop to hold the three flaps in closed position.

2,469,247

TAPE HOLDER

Wheeler B. Smith, Detroit, Mich.

Application February 14, 1947, Serial No. 728,606
4 Claims. (Cl. 242—55.5)



1. A tape holder including a cylinder adapted to receive a spool of tape around it, a member immovable in the cylinder and projecting partway across its bore to facilitate holding the cylinder against rotation as the spool turns around the cylinder, parallel arms detachably mounted on the member and extending adjacent opposite sides of the cylinder and substantially radially thereto, said arms being held immovable relative to the cylinder, a cross bar integral with said arms at their outer extremities and extending between the latter, and a cutter blade across the outer transverse face of the cross bar.

2,469,248

CIGARETTE AND PIPE LIGHTER

Kurt Stoye, New York, N. Y., assignor, by mesne assignments, to Leo C. Krasinski, New York, N. Y.

Application January 26, 1946, Serial No. 643,623
12 Claims. (Cl. 67—7.1)

12. A cigarette and pipe lighter comprising a hollow body with a single compartment for both fuel and air required in producing a flame and having an opening for filling the body with a liquid fuel; a closure for the opening; a tube extending from the body; a wick in said tube adapted to be saturated with the liquid fuel; means on the body for igniting the wick; means associated with said tube and wick for directing a jet of flame at a predetermined angle; and a diaphragm forming a wall of the body adapted to be manually depressed for ejecting said fuel and producing said jet of flame.

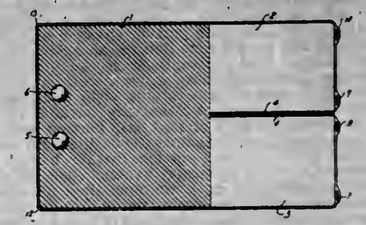
2,469,249

PROCESS OF SCOURING CELLULOSIC TEXTILES USING STEAM

George P. Vincent, Briarcliff Manor, N. Y., and Archie Louis Dubeau, Rumford, R. I., assignors to Mathieson Chemical Corporation, a corporation of Virginia

No Drawing. Application November 27, 1945, Serial No. 631,222
3 Claims. (Cl. 8—139)

1. In the process of scouring cellulosic textile materials wherein the textile, while impregnated with an aqueous scouring liquor, is subjected to the action of steam in a steaming zone and is thereafter removed from the steaming zone and transferred to a physically remote washing zone, the improvement which comprises maintaining the textile at a temperature not lower than about 140° F. during the interval between the steaming operation and the washing operation.



2,469,250

LADY'S HEAD COVERING

Alma von Schrenk, New York, N. Y.

Application May 21, 1947, Serial No. 749,441
2 Claims. (Cl. 2—198)

1. A lady's head covering comprising a rectangular section of knitted material, of a single thickness throughout and of substantially uniform width throughout, a body portion, two independent wings at one end thereof joined to the body portion, fastening elements on each of the wings and cooperating fastening elements on the body portion thereof, the said body portion being adapted to be laid upon the head of the wearer and said wing portions being adapted to be crossed at the back of the wearer's head and said

fastening elements secured together at the forward part of the wearer's head.

2,469,251

ENVELOPE

Edward R. White, New Rochelle, N. Y.

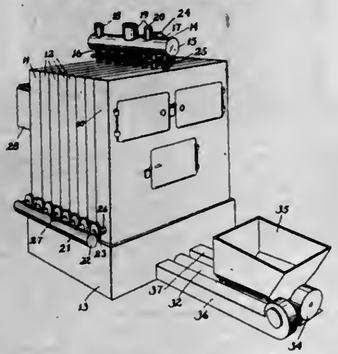
Application December 21, 1945, Serial No. 636,302
9 Claims. (Cl. 229—82)

1. In a single seam envelope consisting of a single front, two side flaps on the sides of said front permanently joined at their free ends to form the back, a bottom flap folded over the two side flaps forming the back and permanently joined thereto, and a flap extending from the front beyond the back and having a fold line adapted to form a closing flap for the envelope, the combination of a sheath formed by the closing flap placed between the front and back with a slot on the fold line of the closing flap, a tongue flap on one of the side flaps substantially of a length equal to the length of the closing flap and of a width substantially equal to the width of the slot, whereby the entrance of the tongue flap into said slot, and the bridging of the space between the front and the closing flap and the engaging of the sheath, the front and back are held closed without the need of other fastening means.

2,469,252

MEANS FOR MOUNTING WALL AND CEILING PANELING

Wallace A. Wiegert and Edward W. Dunham, Floral Park, N. Y.



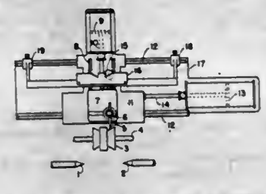
Application September 6, 1945, Serial No. 614,658
3 Claims. (Cl. 20—15)

1. Means for securing wall paneling over an existing wall structure, comprising a furring strip of light, thin, flat sheet metal having the central longitudinal portion of the same depressed in a shallow, narrow, flat nail head receiving groove forming a shallow, longitudinal embossment on the back of the strip for engagement over the wall structure and thin, flat, narrow edge flanges at opposite sides of and arranged to be supported by said embossment in close parallel relation in

front of the wall structure and a wall panel supporting clip engaged over one of the edge flanges of said furring strip and comprising a flat piece of thin, springy sheet metal having a substantially rectangular base portion engaged over the front of one of said edge flanges, an extension at one edge of said substantially rectangular base portion projecting rearwardly therefrom about the outer edge of said furring strip flange and extending in close, substantially parallel relation across the back of said base portion and in binding engagement against the back of said edge flange and said base portion further having a forwardly offset extension at one edge of the same terminating in a wall panel penetrating point projecting in closely spaced, substantially parallel relation across the front of said base portion in position for entry in the edge of a wall panel placed in supported engagement over the front of said furring strip.

2,469,253
SECTIONAL BOILER
Norwood Achey, Rossville, Ga.
Application April 15, 1946, Serial No. 662,387
2 Claims. (Cl. 122—225)

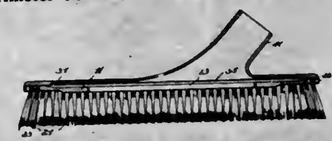
1. A sectional steel boiler including a front, a back and a plurality of intermediate sections communicatively connected and enclosing a combustion chamber; said intermediate sections being hollow and having at least two spaced horizontally aligned registering openings extending therethrough forming flue passages, said openings having water backed walls; said front section being hollow and having an opening extending through its lower portion to provide access to said combustion chamber and having an elongated transverse pocket formed in its upper portion, said opening having water backed walls and being provided with a closure member, said pocket opening rearwardly and communicating with said flue passages and having its top, bottom and side walls water backed, the front wall of said pocket having openings therein to provide access to said flue passages for cleaning, said openings in said front wall being provided with closure members; said back section being hollow and having at least one flue passage having water backed walls extending therethrough and communicating with one of said flue passages through the intermediate sections and at least one elongated vertically extending pocket, said pocket being open in front and having water backed top, back and side walls and having its lower end opening into the combustion chamber and its upper end communicating with another of the flue passages through the intermediate sections; all of said sections being independent of each other and having external nipples at their top and bottom portions connected to outlet and return headers, respectively, and constituting the sole connections between said sections, whereby any of said sections may readily be removed and replaced without disturbing the other sections; the construction being such that the hot gases of combustion will be directed upwardly and forwardly through one of the flue passages in the intermediate sections into the pocket formed in the front section where they are directed inwardly and rearwardly through another of the flue passages in the intermediate section into and through a flue passage of the back section.



2,469,254
EAR TRUMPET, INCLUDING ADJUSTABLE SECTIONS
Severin B. Bankson, San Francisco, Calif.
Application January 15, 1946, Serial No. 641,269
2 Claims. (Cl. 181—25)

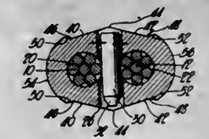
1. An acoustic device comprising a pair of outer ear enclosing shell members forming a resonant chamber, each member including a substantially rectangular plate, two contiguous margins of each of said plates being bent over to form a curved channel for enclosing a portion of the outer ear, said channels slidably interfitting each other and maintaining said shell members in frictional contact, means on the plates for locking the same in selected adjusted positions relative to each other, and another margin of one of said plates bent over to form a channel and engaging a corresponding margin of the other plate to maintain the said shell members in slidable engagement.

2,469,255
PATTERN CONTROLLED GRINDING WHEEL DRESSING MECHANISM
Frederick A. Barnes, Cleveland Heights, Ohio, assignor to Bailey Meter Company, a corporation of Delaware
Application November 18, 1944, Serial No. 564,056
5 Claims. (Cl. 125—11)



1. A grinding machine having a pair of axially aligned centers for mounting and rotating a workpiece and having a grinding wheel mounted for rotation upon a spindle about an axis parallel to the axis of said aligned centers and movable laterally into contact with the workpiece, apparatus for forming a profile on the grinding wheel, said profile being the complement of a profile required to be ground thereby on the workpiece, said apparatus comprising a carriage member adapted to move longitudinally relative to said spindle, a cross slide mounted on said carriage adapted to move laterally relative to said spindle, a dressing tool carried by said cross slide, pattern controlled pneumatic pressure means including a pattern and tracer means adapted to scan said pattern, said tracer means variably discharging air to atmosphere from a substantially constant pressure source in accordance with the form of said pattern to thereby produce variations in air pressure corresponding to said pattern between said constant pressure source and said tracer means, a first fluid motor adapted to move the cross slide and tool laterally with respect to said spindle of the grinding wheel, a second fluid motor adapted to move the carriage and cross slide longitudinally with respect to said spindle, pilot valve means adapted to control the speed and direction of travel of said first fluid motor, said pilot valve means having a stop position to hold said first fluid motor and cross slide laterally stationary with respect to said spindle at any given position, first pressure responsive means responsive to said variations in pressure for operating said pilot valve means in accordance with the form of said pattern, a variable fluid resistance valve regulating the rate of hydraulic fluid passage to or from said second fluid motor and thereby control the speed of travel of said carriage longitudinally relative to said spindle,

said fluid resistance valve having a stop position to hold said second fluid motor and carriage longitudinally stationary with respect to said spindle at any given position, and second pressure responsive means responsive to said variations in pressure for operating said fluid resistance valve in accordance with the form of said pattern, said first and second pressure responsive means jointly controlling said resistance and pilot valves in response to said variations in pressure, whereby a profile parallel to said spindle is formed upon said grinding wheel by the pilot valve stopping the flow of fluid to said first fluid motor and the fluid resistance valve allowing a flow of fluid to said second fluid motor, a profile at right angles to said spindle being formed by the fluid resistance valve stopping the flow of fluid to the second fluid motor and the pilot valve allowing a flow of fluid to said first fluid motor to move the cross slide laterally with respect to the spindle, and profiles other than parallel or right angle profiles being formed on the grinding wheel by the simultaneous movement of both said first and second fluid motors.

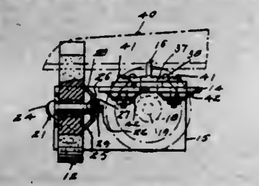


2,469,256
DUSTING BRUSH FOR VACUUM CLEANERS
Abram L. Brakman, Rochester, N. Y.
Application October 18, 1945, Serial No. 623,079
2 Claims. (Cl. 15—398)

1. A vacuum dusting brush comprising a relatively long and narrow brush back member having two rows of bristles projecting obliquely downwardly and outwardly from the lower face of said back member continuously around all sides of said member, said bristles being relatively long and flexible, a slot formed through the thickness of said brush back member and extending longitudinally thereof approximately centrally thereof throughout the major part of the length of said back member, a cover member overlying said back member, said cover member having a depending marginal flange around its periphery embracing and covering the lateral edge of said back member substantially completely around the perimeter thereof, the lower face of said cover

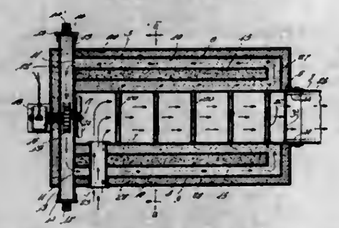
member being spaced upwardly from the upper face of said back member throughout the central part of said member, and a tubular vacuum connection neck formed integrally with said cover member and rising obliquely therefrom at a point intermediate the ends of said cover member, said tubular neck having an axis lying approximately in the same vertical plane as the longitudinal axis of said back member and cover member and being inclined at an angle of approximately 45 degrees to said longitudinal axis.

2,469,257
FITTING FOR WIRE STRUCTURES
Alan E. Brickman, Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Original application November 13, 1944, Serial No. 563,286. Divided and this application November 1, 1945, Serial No. 626,047
3 Claims. (Cl. 24—126)



1. An article of manufacture comprising a metallic fitting having a pair of substantially parallel apertures extending longitudinally therethrough, each of said apertures being of substantially uniform cross-section throughout its length and adapted to receive a standard wire element; a median wall portion between said apertures, said median wall portion having an opening therethrough with its axis in a plane extending between said elements, said opening being of greater diameter than the thickness of said wall portion, and a locking pin of larger diameter than the transverse thickness of said median wall portion extending through said openings and wedgingly contacting both elements, the diameter of said locking pin being materially smaller than the diameter of said opening.

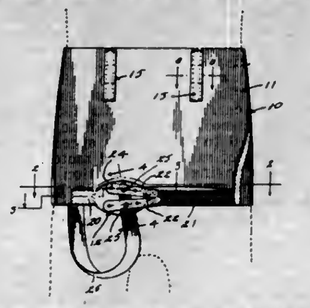
2,469,258
SHARPENER
Jacob Brockley, Newport News, Va.
Application January 23, 1947, Serial No. 723,837
1 Claim. (Cl. 51—214)



A sharpening device comprising a base, an L-shaped clamping member on said base extending downwardly therefrom for clamping said

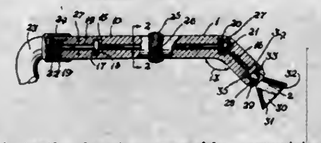
base on a support, a vertically extending flange on said base, upwardly extending arms on said flange, a pair of peripherally engaging sharpening rollers on said arms, headed bolts engaging through said arms and said rollers adjustably mounting said rollers on said arms, a reduced

diameter threaded end on said bolts defining a shoulder adjacent said end, a spring spider on said threaded end engaging said rollers and said shoulder for frictionally holding said rollers against rotation, and a nut on said bolts for adjusting the tension of said spider.



2,469,259
AIR CONDITIONER
William E. Burgess, New Orleans, La.
Application February 7, 1946, Serial No. 646,108
1 Claim. (Cl. 62—129)

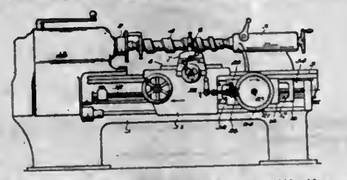
An air conditioner comprising an outer casing open at one end and having an insulating lining, a pair of refrigerant liquid containers in said casing extending along the length thereof and spaced apart transversely of said casing forming an air conductor therebetween opening through the open end of said casing, refrigerant containers in each of said liquid containers spaced from the walls thereof providing liquid conducting passages about the refrigerant containers, a header at the closed end of said casing connecting said liquid containers and extending through opposite side walls of said casing, tubes between said spaced liquid containers extending across said air conductor, an air inlet pipe through a side wall of said conditioner at the closed end communicating with said air conductor, a fan in said air conductor for flowing the air between said liquid containers and over said tubes and means for circulating the liquid through said liquid containers, said tubes and said header.



2,469,260
TRUSS
Bennett Chalk, Far Rockaway, N. Y.
Application January 3, 1947, Serial No. 720,123
1 Claim. (Cl. 128—96)

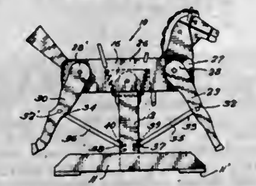
A truss of the kind described comprising an elastic body encircling girdle, the lower front edge of said girdle being upwardly offset forming a rectangular notch thereacross, a horizontally extending strap secured to said girdle at one end of said notch and extending over the edge of the girdle, a resilient pad fixedly carried by said strap and engaging in said notch, a resilient horizontal strap fixedly secured to the edge of the girdle at the opposite end of said notch, a

resilient vertical strap fixedly connected to the lower rear edge of said girdle and depending therefrom, and correlated inter-engaging fastening means carried by said pad and the free ends of said resilient straps for adjusting the pad vertically and horizontally on the wearer.



2,469,261
TEETH CLEANING ASSEMBLY
Fred B. Cooper, Moose Jaw, Saskatchewan, Canada
Application May 5, 1947, Serial No. 746,111
4 Claims. (Cl. 32—59)

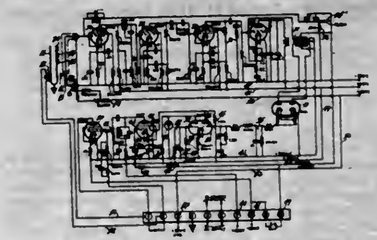
1. A teeth cleaning assembly comprising in combination with a source of power, a handpiece and a rotary applicating element attached thereto, said handpiece embodying an elongated, longitudinally and diametrically bisected casing angulated as approximately 135 degress towards one end thereof and having an open-ended aperture extending therethrough to receive a primary and secondary drive shaft, a collar on said primary drive shaft positioned within an angular recess formed in said casing, said collar and recess functioning to sustain said shaft against end-shifting, means for maintaining the two parts of said casing in symmetrical contiguity, said element being secured to the end of said secondary driveshaft.



2,469,262
LATHE WITH VARIABLE SPEED CARRIAGE FEED
Alfred G. Eggers, Pittsburgh, Pa., assignor to Horix Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application June 11, 1948, Serial No. 32,337
10 Claims. (Cl. 82—5)

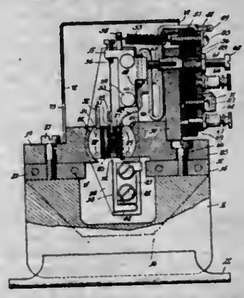
1. A lathe comprising a bed, a carriage slidable lengthwise thereof, a tool holder mounted on the carriage, a head stock and a tail stock mounted on the bed, a feed screw extending lengthwise of the bed, means for rotating the head stock and screw, a feed nut mounted on the screw, a rotatable cam, means connecting the cam with the nut for movement therewith, a stationary rack parallel to the screw, gear teeth

movable with the nut and meshing with the rack for turning the cam while the nut is being moved ahead by the feed screw, and means operatively connecting the cam with the carriage so that as the cam is turned it will move the carriage ahead at a different speed than the nut is moved ahead.



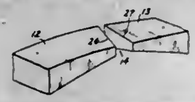
2,469,263
GALLOPING HOBBYHORSE
Henry J. Fischer, Warren Township, Macomb County, Mich.
Application November 30, 1945, Serial No. 631,908
3 Claims. (Cl. 272—52)

3. A hobby horse including a base, a vertical pedestal supported thereby, a U-shaped bar mounted longitudinally through the upper end of said pedestal forming oppositely extending upwardly inclined supporting ends, a body simulating a horse having a belly cavity formed in its under surface, depending supporting pins fixed in the opposite ends of said cavity spaced from and aligned with the upwardly inclined supporting ends, coil springs loosely and freely mounted between said spaced and aligned pins and ends, front and rear legs pivotally attached to the opposite ends of said body, and T-shaped links pivotally connected between said front legs and rear legs having their base ends pivotally attached to the lower end of said pedestal.



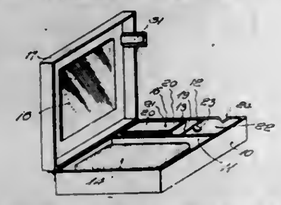
2,469,264
GENERATION AND MODULATION OF ALTERNATING CURRENT SIGNALS
Edwin A. Goldberg, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 29, 1944, Serial No. 565,695
3 Claims. (Cl. 250—36)

2. The combination of alternating current supply means having input and output circuits, modulating means having a pair of control grids, an alternating current amplifier having its input connected to the output circuit of said supply means and having an output circuit, means for applying a fixed unidirectional potential, means connected to said amplifier output circuit and responsive to said fixed unidirectional potential for applying to one of said modulator grids a potential representative of the difference between said fixed unidirectional potential and the amplitude of the output potential of said amplifier, means for applying the output potential of



said amplifier to the other of said modulator grids, means for applying the output potential of said modulator to the input circuit of said supply means, means for adjusting the value of said fixed potential, and means for stabilizing said fixed potential at such adjusted value.

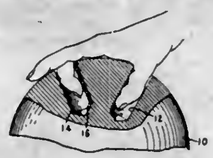
2,469,265
OSCILLOGRAPH
Claude M. Hathaway, Denver, Colo.
Application February 24, 1944, Serial No. 523,700
1 Claim. (Cl. 171—95)



An oscillograph galvanometer comprising a magnetic field structure having a pair of pole piece extensions each provided with opposed concave surfaces corresponding to a section of a cylindrical surface, at least one of said pole piece extensions being adjustable relative to each other, a galvanometer element support comprising a vertical sheet of non-magnetic material, a galvanometer element mounted on one face of said sheet, a pair of paramagnetic pole tips mounted on said face of said sheet on opposite sides of said element, each pole tip having a convex surface complementary to the concave surface of said pole piece extensions whereby said tips serve as pivotal bearings supported by said pole piece extensions and said support may be shifted without changing the flux path of said structure, each tip adjacent said element being so shaped as to concentrate the flux of the magnetic field structure at said element, a mirror mounted on said element above said pole tips, a lens carried by one of said tips to concentrate light on said mirror, and means accessible from the exterior of said galvanometer for adjustably securing in position said galvanometer element and support.

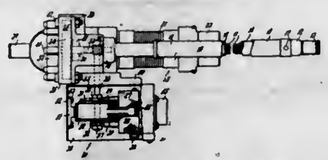
2,469,266
MAGNETIC TRANSDUCER HAVING AN IRREGULAR NONMAGNETIC GAP
Hugh A. Howell, Valparaiso, Ind., assignor to The Indiana Steel Products Company, Chicago, Ill., a corporation of Indiana
Application August 14, 1946, Serial No. 690,458
2 Claims. (Cl. 179—100.2)

1. A magnetic transducer head comprising a paramagnetic core having a pair of confronting pole portions with a nonmagnetic gap therebetween over which a traveling magnetizable tapelike record member is arranged to pass, the confronting faces of said pole portions being shaped to diverge from each other from one side edge of said gap to the other and said pole portions also being decreased in thickness from said first side edge to said second side edge, and a signal coil on said core for establishing a fluctuating magnetic field across said gap.



2,469,267
VANITY CASE AND ATOMIZER
Stanley Hutt, Washington, D. C., and Robert H. Symonds, Arlington, Va.
Application November 19, 1946, Serial No. 710,841
5 Claims. (Cl. 132—79)

1. A cosmetic container comprising a casing adapted to contain toilet articles, an open compartment in said casing, a bellows secured in said compartment, a closed compartment adjacent said open compartment adapted to contain liquid perfume, a re-entrant portion in said closed compartment, a nozzle secured in said closed compartment in communication with the perfume therein and having its outlet end located in said reentrant portion, a second nozzle operatively secured to said bellows and having its outlet end located in said reentrant portion in spaced relation to the outlet end of the first nozzle, a hinged closure for said casing adapted when opened to externally expose said nozzles, and means carried by said closure to seal the outlets in said reentrant portion when said closure is in closed position.

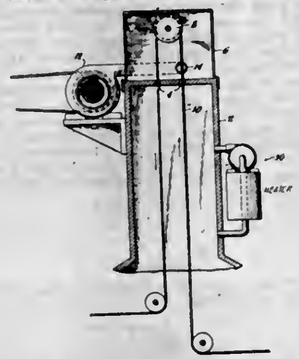


2,469,268
BOWLING BALL INSERT
Chester W. Jerome, Detroit, Mich.
Application March 25, 1948, Serial No. 16,931
5 Claims. (Cl. 273—63)

1. In a bowling ball having a generally cylindrical finger receiving hole, said ball provided in the wall surrounding the hole with a groove extending from the outer end of the hole lengthwise thereof, said groove extending for an arcuate distance substantially less than the complete circumference of the hole and an insert of com-

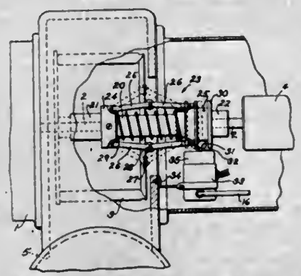
pressible resilient material seated within and filling said groove.

2,469,269
UNITARY MECHANICAL ACTUATOR DEVICE
William P. Lear, Piqua, Ohio, assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich., a corporation of Illinois
Application April 17, 1943, Serial No. 483,515
7 Claims. (Cl. 192—143)



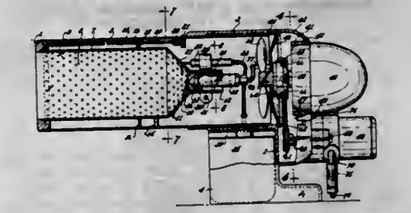
1. A linear actuator unit comprising, in combination, a gear housing; a linear actuator secured to said gear housing and including a pair of relatively rotatable and axially extensible threadedly engaged members; an electric motor secured to said gear housing; a control mechanism housing secured to said gear housing; gearing in said gear housing connected to one of said linear actuator members; an electromagnetic clutch secured to said motor and energized, upon energization of said motor, to connect said motor to said gearing to rotate said one member relative to the other member for effecting extension and retraction of said linear actuator when the other said member is held from rotation; switch means in said control mechanism housing selectively operable to interrupt the energization of said electric motor and electromagnetic clutch responsive to a predetermined actuation of said linear actuator; and means operatively associated with said gearing for actuating said switch means.

2,469,270
APPARATUS FOR SETTING FINISHING COMPOSITIONS
Robert A. Liebel, Allentown, Pa.
Application August 21, 1945, Serial No. 611,866
1 Claim. (Cl. 34—68)



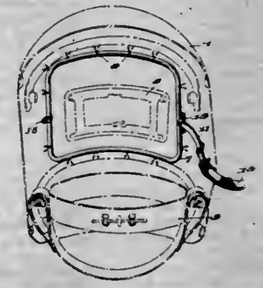
Apparatus for hardening a coating of heat-hardenable finishing material on strip metal, the apparatus comprising a gas-filled, heated oven, a wall of the oven provided with openings of size somewhat larger than the cross section of the coated strip metal, an enclosure forming with the said wall an air space, an inlet for air to the said space, the space being closed except for the said openings and inlet, a roller, means mounting the roller within the said space, means for drawing the coated strip metal in succession through the said oven, through one of the said openings and over the roller, and then through another of the said openings, and means for introducing

air through the said inlet and delivering it to a position between the said one of the openings and the said roller and at a positive pressure above that of the gas in the oven at the level of



the said openings, the said openings during use of the apparatus permitting free escape of the air through them and round the heated strip material.

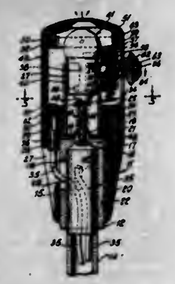
2,469,271
OIL BURNER
Joseph A. Logan, Hadley, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Application January 21, 1946, Serial No. 642,556
1 Claim. (Cl. 158—28)



An electrically operated automatic oil burner of the oil pressure atomizing type having a pressure atomizing nozzle, a pump for supplying oil under high pressure thereto, a conduit connecting the pump and the nozzle, a pressure regulating valve in said conduit, and in combination therewith an unloading by-pass for the pump, a self-opening spring pressed valve in said by-pass, a magnetic device adapted when energized to close said valve against its spring, a switch to energize said magnetic device, a fan to supply air, an air tube to conduct air from the fan to the nozzle, a motor for driving the fan and the pump, a driving transmission coupling said motor, fan and pump, a centrifugal governor mounted on said driving transmission, means on said governor to close said switch and energize said magnetic device when said governor reaches high speed operation, whereby said unloading by-pass will be closed and said pump will operate to deliver oil to said nozzle outlet only when said magnetic device is energized under conditions of high speed motor operation, all for the purpose described.

2,469,272
PRESSURE ATOMIZING OIL BURNER
Joseph A. Logan, Hadley, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Application September 6, 1946, Serial No. 695,239
4 Claims. (Cl. 158—28)

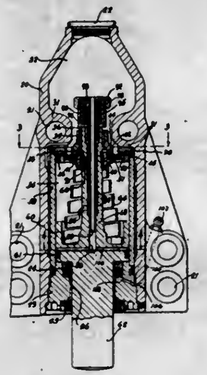
1. A fuel and air supply unit for oil burners, comprising, a supporting frame having a straight cylindrical air passage therethrough open at opposite ends, a hollow frame closing one end of said passage and having its interior communicating with the last-named end of said passage, said hollow frame being supported by said supporting frame and connected thereto for quick and convenient movement to open said end when required and to subsequently close it, a motor fixed to the hollow frame and located outside the same and outside said passage, said motor having a shaft extending into the rear end of said passage and coaxially thereof, a propeller type fan fixed to said shaft, said hollow frame having openings therein for admission of air to the space between the fan and motor, an oil pump fixed to the hollow frame and located below the motor and outside said passage, said pump having a shaft extending into the interior of the hollow frame parallel with and below the motor shaft, and driving connections between said shafts and located entirely within the hollow frame.



2,469,273
WELDING MASK ATTACHMENT
Charles M. Parker, Kelford, N. C.
Application August 22, 1944, Serial No. 550,519½
5 Claims. (Cl. 2—8)

1. An attachment for use with welders' hoods of the type having a face-covering portion with a

sight opening therethrough, the said attachment comprising a perforated air supply pipe adapted to be connected to a source of air under pressure positioned around the sight opening within the face-covering portion of the hood, the said perforations in the air supply pipe being positioned in the outer peripheral surface thereof and constructed for discharging air in an outward direction around the sight opening.

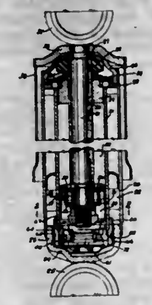


2,469,274
ELECTRICAL SWITCH
Charles Rein, Scarsdale, N. Y.
Application June 3, 1947, Serial No. 752,033
7 Claims. (Cl. 200—167)

3. An electrical switch unit adapted to serve as a grasp knob for the end of a lever comprising, in combination; a metallic base structure serving as means to mount the unit on such lever and as a grounding connection; an elongated, metallic electric lamp socket sleeve; means supporting said lamp socket sleeve on and insulating it from said base structure; casing means arranged circumambiently of said lamp socket sleeve and spaced laterally therefrom, said casing means having a hole therein and having at least a portion of light-transmitting character; a pair of spaced apart, circuit terminal contacts mounted on and insulated from said base structure and arranged between said socket sleeve and said casing means; longitudinally reciprocable contact means slidably mounted within said casing means upon said lamp socket sleeve adapted in a make position to bridge said circuit terminal contacts and simultaneously to connect said lamp socket sleeve thereto, said reciprocable contact means being adapted in another position of break to disconnect said lamp socket sleeve from said contacts and disconnect the latter from each other; and manually-engageable means mounted on said reciprocable contact means and projecting through the hole in the casing for external access to slide longitudinally of said casing contact means between its make and break positions.

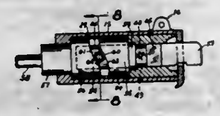
2,469,275
HYDRAULIC BUFFER
Edwin F. Rossman, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 4, 1945, Serial No. 603,179
10 Claims. (Cl. 267—64)

9. An hydraulic buffer comprising in combination; a housing; a centrally apertured partition in said housing dividing it into two compartments, one of which is a fluid reservoir, the other providing a working cylinder; a centrally apertured plug in the outer end of the cylinder opposite the partition; a reciprocal piston in said cylinder, having oppositely disposed extensions one of which is slidably supported in the central aperture of the partition, the other in the central aperture of the plug and extending to the exterior of the housing; a spring interposed between the piston and the partition, urging the piston upon the plug; a fluid flow passage in the partition and about the piston extension slidable therein and providing communication between the working cylinder and the fluid reservoir; means on the last mentioned piston ex-



tension for increasingly restricting the flow of fluid through said fluid flow passage in response to movement of the piston toward the partition and in accordance with the degree of movement of the piston; valved ducts in the partition for establishing a substantially free flow of fluid from the reservoir into the working cylinder in response to movement of the piston by the spring; a bleeder duct in the piston providing communication between the annular wall of the piston and the reservoir; and an annular groove in the piston wall between the bleeder duct opening and the surface of the piston engageable with the plug, said groove containing a packing seal frictionally engaging the annular wall of the cylinder.

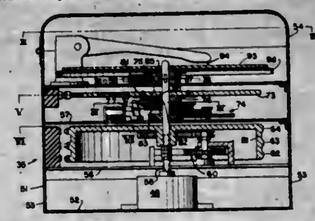
2,469,276
SEDIMENT TRAP FOR HYDRAULIC SHOCK ABSORBERS
Edwin F. Rossman, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application April 17, 1947, Serial No. 742,061
2 Claims. (Cl. 188—100)



1. In a hydraulic shock absorber having a working cylinder and a fluid containing reservoir in communication with the working cylinder, the combination with means for displacing fluid between the reservoir and cylinder; of a cup member in the reservoir, said cup member cooperating with a wall of the reservoir to form a sump

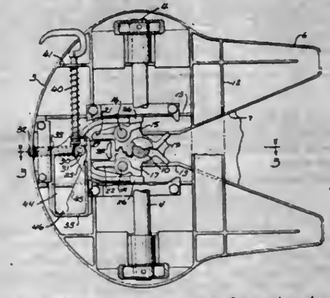
chamber in communication with the reservoir but isolated from the flow of the fluid between the

reservoir and cylinder, for collecting and segregating sediment and foreign particles in the fluid.



2,469,277
POWER CONVERSION ATTACHMENT
Benjamin F. Schmidt, Los Angeles, Calif.
Application August 21, 1944, Serial No. 550,361
5 Claims. (Cl. 74—57)

1. In a device of the character referred to, the combination of: a housing, a hollow cylindrical body rotatable within said housing, a pair of cylindrical members secured within said body in spaced relation to each other and having opposed faces co-operating to form a cam track, one of said members having an axially extending shank for attachment to a source of rotative power and an axial socket, and the other of said members having an axial bore, a tool holding shank extending through the axial bore of said second named member and into the socket of said first named member and being slidable relatively to said members, rollers radially journaled on said shank and extending into the cam track between said members, and means in the housing co-operating with said tool holding shank to insure rectilinear movement thereof during the rotative movement of said members.

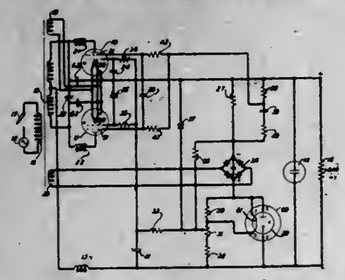


2,469,278
TELEPHONE ALARM SYSTEM
Ralph A. Sears, Bexley, Ohio
Application March 18, 1947, Serial No. 735,487
8 Claims. (Cl. 179—5)

1. An alarm system comprising a circuit having a power section and a telephone section; a relay with a pair of switches, one of said switches being disposed in said telephone section and the other in said power section; a trip switch operative to actuate said relay to close said switches when a predetermined condition exists in the region served by the system; a dialing switch in the telephone section; record reproducing means having a pickup device connected in said telephone section; means for actuating said dialing switch and record reproducing means in timed sequence; means operated by an incoming signal on said telephone section to interrupt the operation of said alarm system; and means in said power sec-

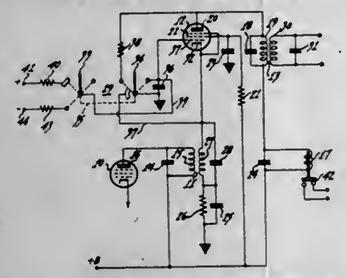
tion for rendering said interrupting means effective only when said relay switches are closed.

2,469,279
COUPLING FOR TRACTORS AND SEMITRAILERS
Carl G. Seyferth, Muskegon, Mich., assignor to West Michigan Steel Foundry Company, Muskegon, Mich., a corporation of Michigan
Application November 21, 1946, Serial No. 711,353
9 Claims. (Cl. 280—33.05)



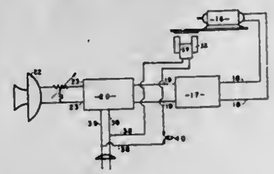
1. In a fifth wheel coupling for a tractor and semi-trailer having a lower fifth wheel member with movable latch means for receiving a king pin, an upper fifth wheel member having a king pin, and locking means for locking the latch in engagement with the king pin, said locking means being shiftable to release the locking action; an operating slide having an inclined plane, a projection on the locking means engageable by the inclined plane upon operation of the slide to shift the locking means to unlocked position, means for holding the slide in shifted position and means operable upon movement of the king pin out of the latching means for releasing the slide for reverse shifting movement thereof and for engaging and holding the locking means in unlocked position.

2,469,280
VOLTAGE REGULATOR TUBE CIRCUIT
Walter F. Scott, Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 18, 1946, Serial No. 662,951
4 Claims. (Cl. 323—17)



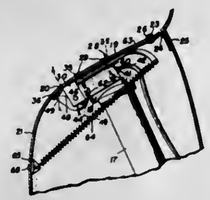
1. The combination, with means for supplying current from a current supply source to a load, of means for minimizing voltage changes across said load comprising a shunt current path connected across said load, said shunt current path com-

prising ohmic resistance, a cold cathode constant voltage tube having a space current path and a conductor, a socket for said tube, means including said conductor for completing a short-circuiting path across a first portion of said ohmic resistance and means for connecting said space current path across another portion of said ohmic



resistance to cause current to flow through said space current path, said tube being removable from its socket to open said short-circuiting path and to simultaneously interrupt the current flow through said space current path whereby said first portion of said ohmic resistance limits the current through said other portion of said ohmic resistance when said tube is removed.

2,469,281
PLURAL FUNCTION CIRCUIT
Richard H. Stafford, Lamoni, Iowa, assignor to Radio Corporation of America, a corporation of Delaware
Application July 8, 1946, Serial No. 681,902
6 Claims. (Cl. 250—27)



1. The combination of an alternating current amplifier including a first stage having an output circuit, a second stage including an electron discharge device having a grid for controlling current conduction between its cathode and anode and having its cathode connected to ground through means coupled to said output circuit, a circuit tuned to said alternating current, a device responsive only to unidirectional current, means for applying operating potential to said anode through said tuned circuit and said device, a capacitor connected between said grid and ground, an impedance device, and a switch arranged to be closed in one position for short circuiting said capacitor and to be closed in another position for grounding said cathode and connecting said impedance means between said cathode and anode.

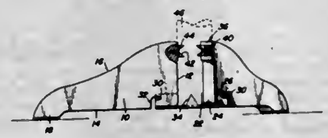
2,469,282
DEVICE FOR INDICATING THE SUM OF THE INTENSITY AND DURATION OF SOUND
Rudolph W. Stanmyre, Syracuse, N. Y.
Application October 26, 1946, Serial No. 705,889
4 Claims. (Cl. 177—311)

1. A device for indicating the sum of the intensity and duration of a sound comprising a microphone, an indicator, means operable in response to sound impressed upon the microphone to cause said indicator to indicate the sum of the intensity and duration of the sound impressed upon the microphone, and means operable to cause said indicator to maintain said indication after the intensity of the sound diminishes, and means operable to release said indicator.

2,469,283
FENDER DOOR LOCK
Homer M. Steele, Ashland, Ky.
Application January 30, 1947, Serial No. 725,326
4 Claims. (Cl. 292—201)

3. A door lock of the class described comprising a wall having an opening therein, a door hinged to cooperate with and close said opening, a housing mounted beneath the door, a latch plate in the form of a disc mounted on said housing for vertical rocking movement on a horizontal axis and having a notch therein and a finger at one side of said notch, the other side of the notch adapted to engage the wall upon closing of the door to turn the latch and move the finger to locking engagement with said wall, the edge portion of the disc also having ratchet notches therein, a vertically pivoted horizontally rockable catch cooperating with said ratchet notches and normally held in engagement therewith within the housing, and electro-magnetic means for releasing said catch to permit release of the latch plate, said electro-magnetic means including a solenoid having a movable core retractable into engagement with the catch for releasing the same from the latch plate, and spring means tending to open said door.

2,469,284
FLUSHING FLUID FOR HYDRAULIC BRAKE SYSTEMS
Chester M. White, Rochester, N. Y., assignor to Genesee Research Corporation, Rochester N. Y., a corporation of New York
No Drawing. Application September 7, 1945, Serial No. 615,078
5 Claims. (Cl. 252—153)



4. A substantially anhydrous flushing fluid for hydraulic brake systems comprising at least 70% of a lower straight chain aliphatic alcohol containing less than 4 carbon atoms, 1–20% of a compound effective to promote solvent action of the alcohol on hydraulic fluid deterioration products and selected from the group consisting of furfuryl alcohol, cyclohexanol, alpha terpinol, benzyl alcohol, thymol, cresol, 1,3,5 xylenol, phenol and catechol, and 1–5% of a compound effective to inhibit corrosion as well as promote solvent action of said alcohol and selected from the group consisting of morpholine, methyl morpholine, ethyl morpholine, pipyridine, cyclohexylamine, dicyclohexylamine, benzothiazol, pyridine and aniline.

2,469,285
HYDRAULIC PRESSURE TRANSMITTING FLUID
Chester M. White, Rochester, N. Y., assignor to Genesee Research Corporation, Rochester, N. Y., a corporation of New York
No Drawing. Application March 18, 1947, Serial No. 735,527
5 Claims. (Cl. 252—78)

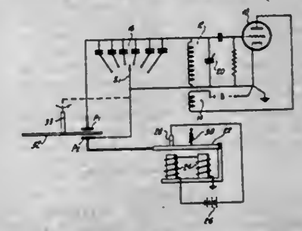
1. A hydraulic pressure fluid consisting essentially of the following ingredients in the approximate percentages indicated:

	Per cent by weight
Tricresyl phosphate	20.00
Dipropylene glycol	40.00
Ethyl ether of triethylene glycol	39.10
Diamylamine phosphate	0.05
Diisopropylamine nitrite	0.05

2,469,286
CHRISTMAS TREE HOLDER
Rudolph A. Wuerl and Randell C. Watkins, Butte, Mont.
Application September 29, 1947, Serial No. 776,742
2 Claims. (Cl. 248—47)

1. A tree holder comprising a plurality of legs having lower edges, a base plate having a central portion, a tab struck upwardly from the central portion of said base plate, a plurality of circumferentially spaced, radially disposed channel members integrally formed with said base plate, the web portions of said channel members bearing against the lower edges of said legs, anchor plates carried by said legs, gripping teeth integrally formed with said anchor plates, and means removably securing said channel members to said legs.

2,469,287
REFRACTORY ELEMENT FOR ELECTRIC HEATERS
Frank Yokel, Pittsburgh, Pa.
Application October 10, 1945, Serial No. 621,414
12 Claims. (Cl. 201—63)



1. An article of the class described comprising a refractory body including a bore for an electrical heating element, said body having a plurality of fin portions extending circumferentially of the wall of said bore and arranged in spaced-apart relation longitudinally thereof to provide a plurality of heat-radiation-directing recesses extending transversely of said bore, and a web extending longitudinally between the successive circumferential portions and dividing said recesses into radial compartments.

2,469,288
ACETAL RESINS
David E. Adelson and Harold F. Gray, Jr., Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application September 20, 1943, Serial No. 503,160
5 Claims. (Cl. 260—73)

1. The homopolymer of a di-allyl acetal of a saturated aliphatic aldehyde of 1 to 4 carbon atoms.

2,469,289
FREQUENCY MODULATION
Joseph G. Beard, Haddonfield, and Leo W. Born, Collingswood, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application February 26, 1945, Serial No. 579,802
6 Claims. (Cl. 250—36)

1. In a frequency modulated oscillation generator, an electron discharge device having its electrodes coupled in wave generating circuits including reactances at least two of which are variable, one of said reactances comprising condensers of different value, switching means for including a selected one of said condensers in said circuits to change the frequency at which said generator operates, said other of said reactances comprising a variable condenser having a fixed plate and a movable plate, mechanical means for varying said movable plate at a tone rate to modulate the frequency of the oscillations generated, and mechanical means linked to said switching means for operation therewith for

changing the effective capacity of said variable condenser when the frequency of operation is changed to hold the extent of modulation deviation of the oscillations generated throughout the range of operation of said generator substantially constant.

2,469,290
PROCESS FOR MAKING TETRACHLORODIFLUOROETHANE

John D. Calfee, Manhassett, and Patrick A. Florio, Brooklyn, N. Y., assignors to Allied Chemical & Dye Corporation, a corporation of New York

No Drawing. Application March 19, 1946, Serial No. 655,594
4 Claims. (Cl. 204—163)

1. The process for preparing tetrachlorodifluoroethane which comprises subjecting a mixture of ethylidene fluoride and not substantially less than 4 molecular proportions of chlorine to the simultaneous action of actinic radiation and heat at a temperature of not less than 400° C. and not more than 550° C. for a period of time sufficient to effect formation of substantial yield of tetrachlorodifluoroethane, and recovering tetrachlorodifluoroethane from the resulting reaction products.

2,469,291
TATTING SHUTTLE

Consuelo G. Cisneros, Hollywood, Calif.

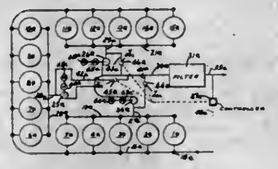
Application April 15, 1947, Serial No. 741,546
3 Claims. (Cl. 87—59)

1. A tatting shuttle comprising two separable parts, a sleeve formation on one part adapted to receive a spool of thread when the other part has been separated therefrom, said sleeve portion having an opening through which thread may be extended, and means for securing the other part of the shuttle to the one part to retain the spool in place therewithin, said means including a threaded connecting screw secured to one of said separable parts, an internally screw-threaded receptor member secured to the other of said separable parts, said connecting screw being adapted to seat in said internally screw-threaded receptor member, and cooperating stop means attached to each of said separable parts to hold the parts so as to permit said spool to turn freely when secured in place in said sleeve.

2,469,292
DRINKING TUBE HOLDER

Catherine B. Cornwell, Belmont, Calif.

Application August 27, 1945, Serial No. 612,925
1 Claim. (Cl. 65—65)



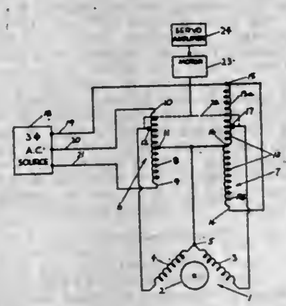
A device for retaining a drinking tube within a glass, comprising an elastic ring-shaped member compressible about the body of the glass, said member having hook ends, a cross pin having openings in the extremities thereof for receiving the hook ends of said compressible member, an elongated strip pivotally connected at its lower end to said pin, said strip having an opening in its upper end for receiving the drinking tube therein, an auxiliary clamp having a bottom portion positioned beneath the base of the glass, and spaced apertured ears formed on the upper end of said clamp capable of encompassing said pin and defining a pivotal mounting for the upper end of said clamp about said pin.

2,469,293
FILTRATION

Hobart O. Davidson, Swarthmore, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware

Application June 27, 1945, Serial No. 601,901
2 Claims. (Cl. 210—62)

1. Apparatus for filtering a dispersion comprising a plurality of filters connected in series, positive displacement pumping means connected in advance of each filter, the pumping means immediately in advance of the last filter having a uniform discharge rate less than that of the other pumping means, a by-pass connection between the discharge and suction lines of each pumping means except the last, a relief valve in the by-pass connection, and means responsive to the pressure in the discharge line of each filter except the last for opening and closing the relief valve in the by-pass connection in advance of the respective filter.



2. Apparatus for filtering a dispersion comprising a plurality of filters connected in series, each of the filters having a greater fineness than that of the preceding filter, positive displacement pumping means connected in advance of each filter, the pumping means immediately in advance of the last filter having a uniform discharge rate less than that of the other pumping means, a by-pass connection between the discharge and suction lines of each pumping means except the last, a relief valve in the by-pass connection, and means responsive to the pressure in the discharge line of each filter except the last for opening and closing the relief valve in the by-pass connection in advance of the respective filter.

2,469,294
INDUCTION MOTOR CONTROL SYSTEM

John W. Dawson, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application March 1, 1946, Serial No. 651,079
6 Claims. (Cl. 318—230)

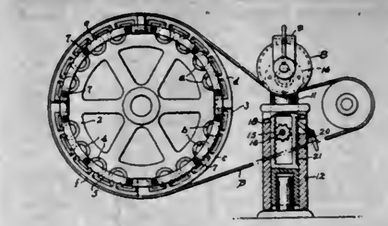
1. A motor control circuit comprising a two-phase A. C. motor the speed of which is to be controlled, said motor having separate windings for each phase, a three-phase alternating current source having three terminals, a pair of transformer windings each having a continuously-variable contact thereon, one of said transformer windings comprising two sections wound in opposite directions and connected at their junction to the mid-point of the other of said transformer windings, circuit means connecting

the two ends of said one transformer winding together and to one of said terminals and the two ends of said other transformer winding to the other two of said terminals, means connecting each of said contacts to one of the windings of said motor, and means for simultaneously varying the positions of said contacts on their respective windings.

2,469,295
SYNTHETIC RESINS AND METHOD FOR PRODUCING SAME

Richard L. Meier and William E. Elwell, Berkeley, Calif., assignors to California Research Corporation, San Francisco, Calif., a corporation of Delaware

No Drawing. Application April 3, 1945, Serial No. 586,442
7 Claims. (Cl. 260—66)



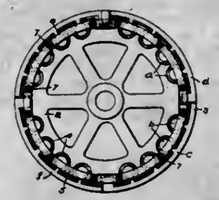
1. A viscous liquid to normally solid resinous copolymer of monomers consisting of vinyl pyridine in which the vinyl group is directly attached to a carbon atom of the pyridine ring and a ketone selected from the group consisting of methyl, ethyl, propyl, butyl and isobutyl vinyl ketones and methyl isopropenyl ketone, said vinyl pyridine being present in an amount of from 5% by weight based on said ketone to 75% by weight based on the mixture of ketone and vinyl pyridine.

2,469,296
BELT DRIVING MECHANISM

Sydney T. Farrell and Frederick L. Farrell, Belmont, Mass.

Application March 24, 1944, Serial No. 527,867
4 Claims. (Cl. 74—242.1)

1. A belt tensioning device comprising a pulley, a support for said pulley including a plunger, a stand in which said plunger is mounted and in which it is guided for vertical sliding movement, means connecting said plunger with said pulley to support the pulley in a laterally overhung relationship to said stand, said means including parts relatively adjustable to support said pulley in any one of a plurality of different angular positions around a horizontal axis passing through said plunger, said means being also constructed and arranged to support said pulley in a belt



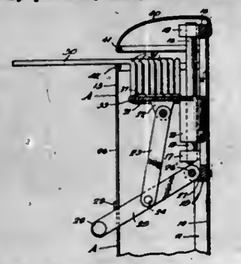
tensioning position both above or below said axis, as desired.

2,469,297
PULLEY

Sydney T. Farrell and Frederick L. Farrell, Belmont, Mass.

Original application March 24, 1944, Serial No. 527,867. Divided and this application July 24, 1946, Serial No. 685,819
5 Claims. (Cl. 74—230.5)

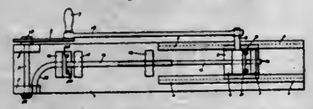
1. A pulley comprising a hub, a rim encircling said hub, one of said members being provided with ribs and the other with grooves in which said ribs are located, both the ribs and the grooves being in the line of the traction force transmitted from one of said members to the other, and cushioning means interposed between said rim and hub and substantially isolating them from each other, said cushioning means including parts located in said grooves and spacing said ribs from the walls of said grooves, the ribs being of greater width in a circumferential direction at intermediate points in their radial length than at other points in said length, and the grooves being of complemental form to receive said ribs, said points of maximum width of both the ribs and the grooves being positioned substantially in said line of traction as to avoid producing any dominant component of the traction force in a direction radially of the pulley, said cushioning means being free to expand and contract sufficiently to cushion the transmission of shock from said hub to the rim, or vice-versa.



2,469,298
RACK STRUCTURE

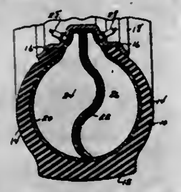
Edward M. Gilmore, Jr., Chicago, Ill., assignor to Imagineering Corporation, Chicago, Ill., a corporation of Illinois

Application October 4, 1945, Serial No. 620,240
5 Claims. (Cl. 211—171)



1. A rack structure comprising a frame providing a generally semi-circular track at its top, a

carriage member slidably mounted in said frame for vertical movement, a plurality of support members having portions bent at right angles and connected by pivotally supported means to said



carriage member, portions of said support members resting upon said semi-circular track, and means for raising and lowering said carriage member to move said support members to vertical and horizontal positions.

2,469,299
CUTTING AND/OR MARKING APPARATUS
John Edward Hatfield, Letchworth, England, assignor, by mesne assignments, to Irving Air Chute Co. Inc., Buffalo, N. Y., a corporation
Application April 5, 1945, Serial No. 586,788
In Great Britain January 7, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires January 7, 1964
19 Claims. (Cl. 164—42)

1. In apparatus for cutting into a plurality of sections of desired length such materials as tape, elastic, cord, wire and the like, the combination of a frame, a slidable carriage upon the frame, material gripping means on the carriage, a crank having an axle rotatably supported upon the frame on a predetermined rotary axis, a connecting rod mechanism attached to said carriage and connected to said crank remote from its axis, and a material severing knife operatively connected with the axle of the crank.

2,469,300
TIRE
William J. Heyneman, Portsmouth, Va.
Application October 25, 1945, Serial No. 624,422
2 Claims. (Cl. 152—339)

1. In an inner tube for pneumatic tires, the combination which comprises a tube having a continuous centrally disposed longitudinally and radially extended web providing a partition dividing the tube into two complementary sections, the width of said web being equal to substantially one-half of the inner transverse circumference of the tube whereby with one section of the tube deflated, the web will be forced against the inner surface thereof to cover a puncture or bridge a rupture therein, the edges of said web being integral with the material of the tube and, reinforcing cord structure embedded within the web therein throughout the width thereof, and covered on both sides with material corresponding to that of the tube whereby when the web is forced against the inner surface of the tube, the pressure of the remaining section will provide a snug fit to close a puncture or blowout, said web having a thickness greater than that of the wall of the tube whereby the punctured or ruptured wall of the tube is reinforced thereby when the web is positioned against the inner peripheral surface thereof.

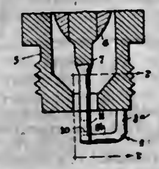
2,469,301
GOLF PRACTICE DEVICE
Frank L. Johnston, Portland, Oreg.
Application October 4, 1947, Serial No. 777,895
2 Claims. (Cl. 273—35)

1. Apparatus of the class described comprising a base, a hollow vertical column fixedly secured to the base, a shaft rotatably mounted within the column and adjustable vertically with respect thereto, a head rigidly secured to the upper end of said shaft, a body-embracing element attached to said head and rotatable with said shaft as a pivot point, and means formed centrally of said body-embracing element to provide a single point of contact with the spinal column of the user to restrict partial body movement about said shaft as the pivot point.

2,469,302
TRANSITORY GARMENT
Lynden M. Kelleher, San Francisco, Calif.
Application December 12, 1945, Serial No. 634,499
4 Claims. (Cl. 2—69)

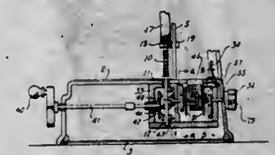
1. Fastening means for a skirt-like garment adapted to be worn with the upper edge thereof encircling the waist of the wearer and with the end edges thereof in overlapped relation, said means comprising an elongated strip of fabric gathered into a plurality of substantially semi-circular loops along its length and having the portions thereof between the loops secured to the

garment, said strip being located adjacent the upper edge of the garment and one of its end edges and being substantially parallel to said upper edge of the garment, and another elongated strip of fabric having an end portion thereof secured to the garment adjacent the upper edge and the other end edge of said garment and having a free end with a button thereon, the secured end portion of said other strip being substantially



parallel with said first-mentioned strip and being located in closer relation thereto than the free end of said other strip, said loops being of such size in relation to said button that the latter is adapted for full-bodied introduction through a selected loop to secure the garment around the waist of a wearer whereupon the weight of the hanging garment as applied to the selected loop distorts said loop sufficiently to prevent accidental disengagement of said button therefrom.

2,469,303
INSECT REPELLENT COMPRISING BENZYL ETHERS OF ETHYLENE GLYCOL
Robert B. Killingsworth, Douglaston, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application March 15, 1945, Serial No. 582,994
1 Claim. (Cl. 167—30)



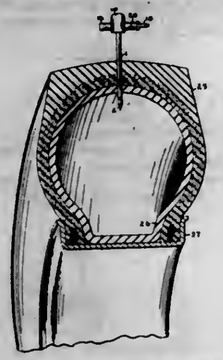
An insect repellent comprising a mono (trimethyl benzyl) ether of ethylene glycol, and a liquid carrier therefor.

2,469,304
SPARK PLUG
Richard J. Lukeman, Montreal, Quebec, Canada
Application January 10, 1947, Serial No. 721,359
1 Claim. (Cl. 123—169)

A multiple spark gap spark plug in which spark gaps of different predetermined lengths are provided by an arrangement of sparking terminals which has the effect of confining arcing of the current to that gap whose length is best suited to the compression of the engine cylinder in which the spark plug is fitted, said plug comprising a metal shell, an insulator fitted in said shell, a central insulated electrode extending downwardly through said insulator and said shell, the lower end of said electrode being branched to provide three terminals including two outer laterally spaced terminals of substantially equal length and a central terminal of shorter length located between said outer terminals, and a grounded electrode having one end secured to said shell and the other end interposed between the outer terminals of the insulated electrode in spaced relation thereto, said grounded electrode being also positioned below and in spaced relation to the central terminal of said insulated electrode, the relative arrangement of the grounded electrode and the terminals of the insulated electrode being such that the length of the spark gap between the grounded electrode and any one terminal of the insulated electrode is different from the length of the gap separating the grounded electrode from any one of the remaining terminals of the insulated electrode.

2,469,305
DEVICE FOR PROPORTIONING LIQUID MIXTURES
Joseph S. Maltese, Hempstead, N. Y., assignor to Rinshed-Mason Company, Detroit, Mich., a corporation of Michigan
Application May 18, 1945, Serial No. 594,547
6 Claims. (Cl. 33—126.7)

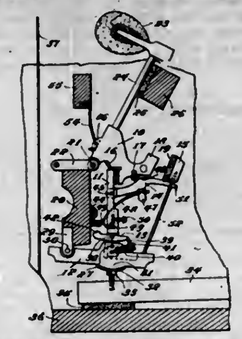
2. A device for the proportional mixing of paint, lacquer or the like comprising, a vertically adjustable element for contacting the surface of paint in a container, mechanism for vertically adjusting said element, counting means including a carrier, a plurality of counters on the carrier, the counters being operatively connected to the mechanism at different ratios so that each will indicate movement of the gauging element in equal increments of containers of different heights, means for providing a single sight opening and means for adjustably setting the carriage to position an elected counter at the sight opening.



2,469,306
GARMENT SLEEVE BLOCK
Eugene H. McKeehan, St. Louis, Mo.
Application December 31, 1946, Serial No. 719,557
4 Claims. (Cl. 223—74)

1. A sleeve form retaining member adapted to be positioned within the cuff portion of a sleeve, comprising two flat bodies disposed in spaced end to end relation, one of said bodies having

outwardly bowed gradually converging sides joining in a rounded edge at the end of the body remote from the other body, the said other body having outwardly bowed sides in more sharply convergent relation than the sides of the said one body and merging in a rounded end edge, coupling means between the bodies facilitating their separatory movement, resilient means normally urging the bodies apart, and a flexible coupling between the bodies on the outer sides thereof for limiting the separatory movement of the bodies.



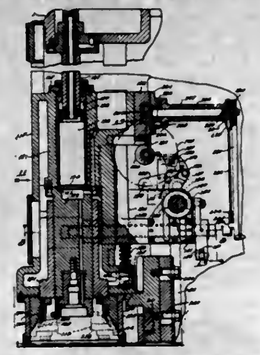
2,469,307
SELF-SEALING INNER TUBE DEMONSTRATION TOOL
Frederick E. Mechling, Akron, Ohio, assignor to Seiberling Rubber Company, Barberton, Ohio, a corporation of Delaware
Application March 26, 1948, Serial No. 17,219
1 Claim. (Cl. 35—49)

A tool for demonstrating the self-sealing properties of an inner tube inflated inside of a tire, which includes a rigid metal shaft which is hollow throughout most of its length and pointed at its inner end, an enlargement at the outer end of the shaft to serve as a head for driving the tool into a tire, a valve the stem of which passes through the head, the portions of the valve on both sides of the head being larger in diameter than the stem to facilitate manual removal of the tool from a tire, an opening through the valve stem, the hollow of the shaft connecting at the inner end of the shaft with holes located on different longitudinal surfaces of the shaft near the point and at different distances from the point, the hollow connecting at the other end with one end of the hole in the valve stem when the valve is in one position, and a hole in the head which with the valve in that position connects the other end of the hole in the stem with an opening in the surface of the head.

2,469,308
VERTICAL PIANO ACTION
Victor M. Montoya, Caracas, Venezuela
Application December 11, 1947, Serial No. 790,991
5 Claims. (Cl. 84—240)

1. An upright piano action, comprising a hammer having a butt, a jack positioned to impact the butt of the hammer in the upward movement thereof, a wippen positioned to be engaged by a piano key and adapted to actuate the jack, a back check carried by the wippen positioned to contact the hammer butt, a support rail on which the hammer butt and wippen are pivotally mounted, a jack control lever pivotally mounted

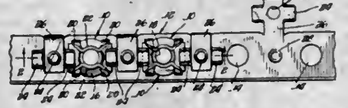
on the jack with one end extending toward the support rail, said rail having a stop thereon positioned to be engaged by the extending end of the said control lever, and means adjusting the position of said control lever.



2,469,309
METHOD FOR PREVENTING ICE FORMATION ON SURFACES
Rupert C. Morris, Berkeley, and Edward C. Shokal, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application September 20, 1943, Serial No. 503,154
7 Claims. (Cl. 252—78)

1. In a method for preventing ice formation on surfaces exposed to ice forming conditions the step comprising wetting said surfaces with a homogeneous fluid having a freezing point below 0° C., said homogeneous fluid consisting of between approximately 10% by weight and approximately 90% by weight of 3-sulfolanol and the remainder being substantially material selected from the group consisting of water, water-soluble alcohols, and mixtures thereof.

2,469,310
MACHINE FOR FORMING GEARS
Harry Pelphrey, Detroit, and James Martin, Ferndale, Mich., assignors to Michigan Tool Company, Detroit, Mich., a corporation of Delaware
Application May 31, 1946, Serial No. 673,366
17 Claims. (Cl. 90—10)



1. In a machine for forming simultaneously a plurality of teeth in a gear blank comprising, a base, a reciprocating ram mounted in said base, means to effect reciprocation of said ram, a ram guide housing mounted in said base in spaced, surrounding relationship to the ram, a spiral guide fixed to the ram within the ram housing, complementary spiral guides fixed interiorly of the ram guide housing, said guides proving mating spiral surfaces for effecting partial rotation of the ram about its longitudinal axis in accordance to the helix of a gear to be formed as said ram reciprocates, a lever secured to the ram guide housing, a crank pinned to said lever, a rotatable eccentric operatively associated with said crank, the rotation of said eccentric moving said crank,

movement of said crank effecting rotation of said lever and ram guide housing for reducing the

spiral angle followed by the ram during part of the operating cycle, and driving means to effect rotation of said eccentric.

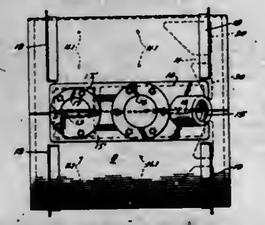
2,469,311
SCREW LOCKING DEVICE
Ougljesa Jules Poupitch, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a corporation of Illinois
Application March 22, 1945, Serial No. 584,099
4 Claims. (Cl. 85—32)

1. A locking device for screws including a nut supporting plate having a plurality of screw accommodating apertures, a nut member companion to each aperture supported on said plate, each nut including a base portion and side members projecting laterally from opposite edges of said base portion, and nut anchoring means including integral arms extending from one edge of said plate, said arms being folded over and superimposing said plate, and having laterally extending portions overlying opposite sections of the bases of adjacent companion nuts between a pair of side members thereof, the extremities of said laterally extending portions being in substantial alignment with the apertures longitudinally of said supporting plate.

2,469,312
SCREW LOCKING DEVICE
Ougljesa Jules Poupitch, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a corporation of Illinois
Application March 22, 1945, Serial No. 584,100
4 Claims. (Cl. 85—32)

1. A locking device for screws comprising an apertured nut supporting plate, flanges extending laterally from opposite sides of said plate and including opposed lateral strap portions, a nut member transversely shorter than the distance between said flanges and supported by said plate for permissive relative movement between the said flanges, said nut member including a base, side members projecting laterally from the opposite edges of said base, nut anchoring means comprising a circuitous cage member having a pair of oppositely positioned parallel lengths longitudinally longer than the width of said strap portions and slidably embracing the outer surfaces thereof, and a pair of oppositely positioned interconnecting parallel lengths traversing said plate and slidably embraced by the inner surfaces of said side members whereby said nut member may be guidingly shifted rectilinearly within given limits along intersecting lines of direction, a portion of said flange overlying the first mentioned lengths of said cage member for retaining the said cage member in operative position.

2,469,313
ECCENTRIC DRIVE GEAR MECHANISM
Stanley Rzepela, Philadelphia, Pa.
Application September 27, 1948, Serial No. 51,413
6 Claims. (Cl. 74—30)

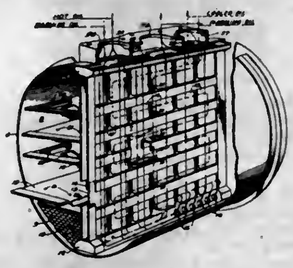


1. In a device of the kind described, the combination with a driving gear, of a head including a cup-like body member having an elongated recess centrally disposed therein, an elongated rack-carrying member fixed centrally in said recess, said gear being located between the rack-carrying member and the side of said recess, an eccentric strap surrounding said body member and rotatable with respect thereto for angular adjustment of the rack-carrying member with respect to the gear, and means to secure the eccentric strap in adjusted position.

2,469,314
CATALYST FOR CRACKING HYDROCARBONS
Lloyd B. Ryland, El Cerrito, and Miroslav Tamele, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application October 23, 1945, Serial No. 624,100
2 Claims. (Cl. 252—455)

1. A catalyst for the catalytic cracking of hydrocarbon oils consisting essentially of a substan-

tially homogeneous synthetic silica-alumina composite having between 18% and 38% by weight of alumina, an average pore diameter of at least 50 Å, a surface of at least 400 m.²/gm., and a particle density below 0.95 gm./cc.



2,469,315
HEAT EXCHANGER
Joe C. Shaw, Racine, Wis., assignor to Young Radiator Company, Racine, Wis., a corporation of Wisconsin
Application May 4, 1946, Serial No. 25,039
10 Claims. (Cl. 257—2)

1. In a device of the class described, the combination of a supporting shell having inlet and outlet ports, a plurality of axially-disposed tubes filling the space within said shell and having their ends supported in bonded relationship so as to form a sealed fluid core within said shell surrounding said tubes and providing a fluid flow path between said ports, transversely arranged partitions dividing said core into two tiers of superimposed core sections wherein a pair of opposed core sections communicate respectively with said inlet and outlet ports, the partitions which determine the superimposed core sections of each tier each having an opening formed therein providing communication between core sections on the opposite sides of the partition, the openings in adjacent partitions being located at opposite ends whereby the fluid flow is through said core sections consecutively in opposite directions substantially parallel to the axis of said tubes, the partition of which divides said core into two tiers of core sections having an opening formed therein at a point remote from said shell inlet and outlet ports and providing communication between adjacent core sections in opposite tiers, said latter partition also having an aperture formed therein at a point intermediate said last-mentioned opening and said ports providing communication between core sections on opposite sides of said latter partition, and valve means controlling said aperture and adapted to be actuated by a predetermined differential in a condition of fluid in said opposite core sections.

2,469,316
HEAT-EXCHANGE UNIT
Joe C. Shaw, Racine, Wis., assignor to Young Radiator Company, Racine, Wis., a corporation of Wisconsin
Application June 8, 1946, Serial No. 675,471
2 Claims. (Cl. 257—2)

1. In a heat-exchange unit of the class described, the combination of a supporting shell, a plurality of tubes extending transversely across said shell in an axial plane and dividing said shell into two compartments, headers providing communication between the adjacent ends of said tubes, other axially-disposed tubes filling the space in each of said compartments and having their ends supported in bonded relationship so as to form a sealed fluid core surrounding said other tubes in each of said compartments, said transversely-disposed tubes being spaced apart from each other axially of said shell so as to form areas between said transversely-disposed tubes through which communication is afforded between the fluid cores of said compartments, one of said headers having openings formed therein to provide communication between said transversely-disposed tubes and said fluid cores, means providing a shell inlet port and a shell outlet port, said inlet port communicating through the other said header with said transversely-disposed tubes, said outlet port communicating with said fluid cores, baffle means inter-

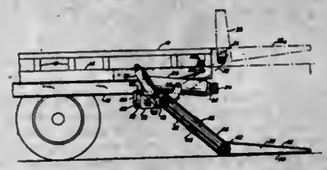
posed between certain of said axially-disposed tubes and extending transversely across said shell and dividing each of said compartments into two or more parallel sections, said baffle means having openings formed therein so as to effect a back-and-forth fluid flow through said core sections axially of said shell between the header openings and said fluid-core outlet port, one or more of said baffle means also having an aperture formed therein juxtaposed with a space between said first mentioned tubes affording communication between core sections on opposite sides of said baffle means in advance of the fluid flow through said baffle-means openings, and valve means actuated by a predetermined differential in the pressure of the fluid in the core sections on opposite sides of said baffle means for controlling communication through said apertures.

2,469,317
INSECTICIDAL AND FUNGICIDAL COMPOSITION
Edward C. Shokal, Oakland, and Lynwood N. Whitehill, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application August 26, 1944, Serial No. 551,423
11 Claims. (Cl. 167—24)

4. An insecticidal and fungicidal composition suitable for use in a household, comprising a normally liquid hydrocarbon having its boiling range substantially above tthe boiling range of gasoline, said hydrocarbon being a mineral hydrocarbon spray oil, and a dialkenyl diester of diglycollic acid wherein the alkenyl radicals each have from 3 to 4 carbon atoms, inclusive, and are selected from the group consisting of allyl and methallyl radicals.

2,469,318
LOW VISCOSITY POLYVINYL BUTYRAL RESINS AND METHODS OF MAKING SAME
Donald R. Swan, Berea, Ohio, assignor, by mesne assignments, to Pittsburgh Plate Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application February 15, 1946, Serial No. 648,011
3 Claims. (Cl. 260—17)

1. The method of obtaining a crisp, fibrous, readily washable precipitate containing at least 50 percent of a low viscosity polyvinyl butyral resin made from a polyvinyl acetate having a viscosity of not more than 10 centipoises at 20° C. in a solution in benzene containing 86 grams per liter which includes the steps of adding to a solution of such resin in an organic solvent which is miscible with water, a sufficient quantity of a cellulose derivative from the group consisting of nitrocellulose, cellulose acetate butyrate and ethyl cellulose to make a solution in which the cellulose derivative constitutes from 10 to 50 percent of the total weight of resin and cellulose derivative in the solution, and simultaneously precipitating the resin and cellulose derivative by mixing the solution with water.



2,469,319
SANDING SEALERS EMBODYING POLYVINYL BUTYRAL RESINS
Donald R. Swan, Berea, Ohio, assignor, by mesne assignments, to Pittsburgh Plate Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application February 15, 1946, Serial No. 648,012
6 Claims. (Cl. 260—23)

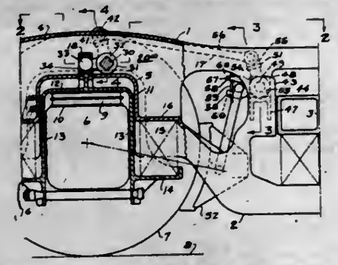
1. A sanding sealer particularly adapted for application to wood surfaces preparatory to the application of lacquer thereto, said sealer comprising an organic solvent, a major portion of the solids content of said sealer being a polyvinyl butyral resin having the viscosity of a polyvinyl butyral resin made from polyvinyl acetate having a viscosity of not more than 10 centipoises at 20° C. in a solution in benzene containing 86 grams per liter, said sealer containing substantially no shellac and substantially no maleic resin, said sealer containing zinc stearate in the amount of not more than 10 percent of the solids content thereof, and said sealer drying sufficiently rapidly to permit sanding within one hour after spraying without drag or gumming of the sandpaper.

2,469,320
COATING COMPOSITIONS EMBODYING POLYVINYL BUTYRAL RESINS AND METHODS OF MAKING SAME
Donald R. Swan, Berea, Ohio, assignor, by mesne assignments, to Pittsburgh Plate Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application February 15, 1946, Serial No. 648,013
1 Claim. (Cl. 260—29.1)

The method of producing coating compositions of sprayable consistency which includes the steps of adding to polyvinyl alcohol in a suspension in an organic solvent a mixture of butyraldehyde and acetaldehyde having mole ratios of from 1 to 2 of butyraldehyde and from 2 to 1 of acetaldehyde in the presence of a mineral acid catalyst promoting interaction of the various reagents and production of a solution of mixed polyvinyl acetal resins, neutralizing the solution of resins, filtering the solution, and, without in the meanwhile precipitating the resins, diluting the solution with an organic solvent to a viscosity suitable for spraying purposes, the polyvinyl alcohol used in producing the resins being one having a viscosity of substantially 5 centipoises in a 4 percent solution in water at 20° C.

2,469,321
POWER-OPERATED TAIL GATE MECHANISM FOR VEHICLES
Louis S. Wood, Burlingame, Calif.
Application May 12, 1947, Serial No. 747,564
10 Claims. (Cl. 214—77)

1. A power operated tail gate for a vehicle body, comprising a platform, a first shaft and a second shaft concentrically arranged and carried for rotation by said body, at least one lifting arm having a fixed connection with said first shaft and a pivotal connection with said platform adapted to raise said platform upon the rotation of said first shaft, means comprising an interconnection between the second shaft and the platform adapted in one phase of operation to serve as a reaction member to maintain substantial parallelism between said platform and the ground during rotation of said first shaft and in another phase of operation to translate rotational movement of said second shaft to a rotational movement of said platform about its axis of pivot with the lifting arm, and power means carried by the body to separately rotate said shafts.



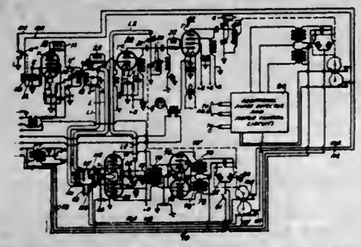
2,469,322
OXIDATION OF SULFURIC ACID HEAVY ALKYLATE
Eldon Lester Armstrong, Jackson Heights, and Warren Andrew Beman, Douglaston, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application August 22, 1945, Serial No. 612,144
6 Claims. (Cl. 260—451)

1. The method for producing a mixture of oxidation products of unsaturated and saturated nature, which comprises: heating sulfuric acid heavy alkylate produced by the alkylation of isoparaffins with olefins and having an iodine number of about 75, in the presence of a peroxide to elevated temperatures whilst passing air through said heavy alkylate, until the reaction mixture contains oxidation products.

2,469,323
RAILWAY TRUCK
Donald S. Barrows, Rochester, N. Y., assignor to The Symington-Gould Corporation, Depew, N. Y., a corporation of Maryland
Application September 11, 1944, Serial No. 553,623
20 Claims. (Cl. 188—190)

1. In a railway truck having a resiliently mounted side frame carried by a journal box

and a wheel of a wheel and axle assembly, the combination of, a bracket carried by the side frame, a brake hanger jaw pivoted directly to and movable with respect to said bracket, said brake hanger jaw being in alignment with said



wheel for supporting a brake beam and actuating means for pivoting said brake hanger jaw in one direction when the side frame moves relative to the journal box in the opposite direction for maintaining a constant relationship between said brake beam and wheel.

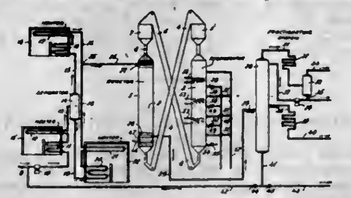
2,469,324

CIRCUIT TUNER

Joseph G. Beard, Haddonfield, N. J., and Robert F. Dressler, Philadelphia, Pa., assignors to Radio Corporation of America, a corporation of Delaware

Application February 9, 1945, Serial No. 577,042
21 Claims. (Cl. 250—36)

1. In a signalling system comprising a source of oscillations the frequency of which is stabilized by a reactance and at least one tuned circuit coupled with said source to be excited by the oscillations therein, in combination, automatic apparatus including an oscillatory energy phase comparer and tuning apparatus in said one circuit controlled by said phase comparer for maintaining said one circuit tuned substantially to resonance at the frequency of said source, and apparatus including part of said first named apparatus conditioned by changing the stabilizing reactance of said source for automatically tuning said one circuit to its lowest resonant frequency.



2,469,325

CONVERSION OF HYDROCARBONS

Otis L. Branson, Beaumont, Tex., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York

Application May 4, 1946, Serial No. 667,299
3 Claims. (Cl. 196—52)

1. The method of maintaining a substantially uniform optimum cracking temperature in a moving bed catalytic cracking reactor during the catalytic conversion of a long boiling range mixture of hydrocarbons into high quality gasoline which comprises heating solid catalytic contact mass material in an enclosed regenerating zone to a catalytic cracking temperature, heating a charge oil containing a substantial fraction boiling above about 800° F. to about 900° F. to a temperature of about 800° F. to about 900° F., separating said heated oil into a portion vaporous at a temperature of about 800° F. to about 900° F. and a portion liquid at a temperature of about 800° F. to about 900° F., separately reheating said vaporous portion and said liquid portion of the charge oil to about 950° F. to about 1000° F., whereby superheated vapors and superheated liquid are obtained without substantial cracking, free from any substantial amount of coke, and free from substantial amounts of the products of thermal cracking, introducing said heated contact mass material at about the temperature of catalytic cracking as a compact column into a conversion zone, introducing said superheated vapors and superheated liquid into said compact

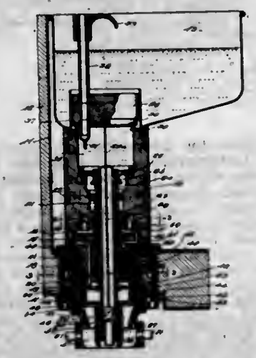
column at a point in the column near that at which said contact mass material enters said conversion zone, the amount and temperature of said contact mass material and the amount and temperature of said superheated vapors and said superheated liquid being proportioned to maintain the desired catalytic cracking temperature substantially uniform throughout said compact column in said conversion zone whereby the rates of flow of both catalytic contact mass material and said superheated vapors and liquid may be varied over the full operating range of the equipment without materially affecting the average cracking temperature, flowing said superheated vapors and superheated liquid concurrently with said contact mass material, removing vaporous products of conversion from said column at a point near that at which said contact mass material leaves the conversion zone, and fractionating said conversion products, whereby high quality gasoline is produced from long boiling range charge oil without the production of substantial amounts of the products of thermal cracking.

2,469,326

INTERPOLYMERIZATION OF THIOPHENE AND BUTADIENE

Philip D. Caesar, Wenonah, and Alexander N. Sachanen, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application November 15, 1944, Serial No. 563,628
8 Claims. (Cl. 260—93)



4. The product obtained by contacting a thiophene reactant selected from the group consisting of thiophene, and monoalkyl thiophenes and dialkyl thiophenes wherein the alkyl substituent is a low molecular weight alkyl group, with butadiene-1,3 in a molecular proportion of thiophene reactant to butadiene-1,3 of 1–3:3–1, in the presence of sulfuric acid in amounts to produce a concentration of sulfuric acid in the system varying between about 5 per cent and about 100 per cent based on the total weight of the thiophene reactant and butadiene-1,3 in the charge, and for a period of time sufficient to effect resinification.

2,469,327

BEVERAGE DISPENSING DEVICE

Bruce G. Copping, Fulton County, Ga., assignor to The Coca-Cola Company, Wilmington, Del., a corporation of Delaware

Application December 9, 1943, Serial No. 513,577
6 Claims. (Cl. 222—145)

1. In a device of the character described, a syrup tank, a syrup measuring chamber positioned therein, filtering means between the tank and chamber, a valve regulating the entrance of syrup into the chamber, a check-valve in said chamber, a syrup tube communicating with the chamber, a syrup nozzle on the end of said tube, a flow regulating valve in said tube, spring means normally retaining said valve in a closed position concurrently with the valve between the chamber and tank being in an open position, a carbonated water inlet, a valve governing said inlet, spring means normally holding said valve in a closed position, means forming V-shaped apertures of such length, size and hydraulic radius as to use up substantially all of the pressure energy of the fluid, in friction, and at the same time maintain streamline flow in the fluid, disposed adjacent said carbonated water inlet, fluid velocity reducing means adjacent the discharge ends of said apertures, a nozzle adjacent said restricting means having an inwardly-turned surface and, vanes in said nozzle, whereby a stream of carbonated water is given a whirling motion and directed towards syrup issuing from the syrup nozzle.

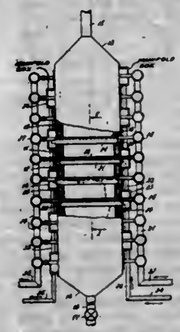
2,469,328

DRY-AIR PUMP

Claude Russell Cox, Chicago, Ill., assignor to Andrew Corporation, Chicago, Ill., a corporation of Illinois

Application July 20, 1944, Serial No. 545,874
2 Claims. (Cl. 183—4)

2. A dry air pump having an inlet and an outlet, two vertical concentric cylinders, said inner cylinder being connected to said inlet, base and top supporting structures for said cylinders, said inner cylinder being secured rigidly to both said supporting structures, means within said inner cylinder for compressing air, air passage means including a valve interconnecting said inner and outer cylinders, a resilient gasket extending from the outer cylinder to the inner cylinder, a collar surrounding the upper portion of said gasket adjacent said inner cylinder, and extending to the exterior of said outer cylinder, said collar having an air outlet and an annular pas-



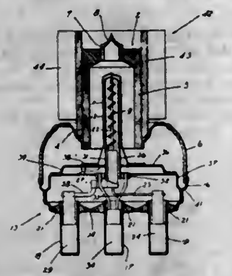
sage, said gasket having apertures communicating with said annular passage and said outer cylinder, a mesh member supported by said gasket and interposed between said apertures and said outer cylinder, dehydrating means substantially filling the space between said inner and outer cylinders said dehydrating means comprising a non-deliquescent adsorption material, heat insulation means arranged about the lower portion of said cylinder, and resilient means interconnecting said outer cylinder with said base supporting structure.

2,469,329

APPARATUS FOR CONDUCTING REACTIONS IN THE PRESENCE OF A SOLID MATERIAL

John A. Crowley, Jr., Scarsdale, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

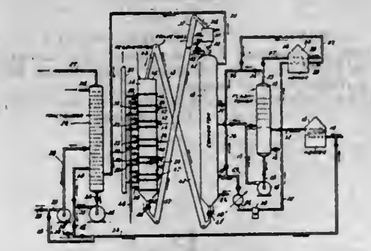
Application October 14, 1944, Serial No. 558,695
4 Claims. (Cl. 23—288)



1. An apparatus for conducting thermochemical reactions comprising an elongated substan-

tially vertical vessel; means to introduce particle form solid material to the upper end of said vessel, means to withdraw solid material from the lower end thereof, throttling means associated with said withdrawal means to permit control of the solid material flow so as to maintain a substantially compact column thereof within said vessel, a plurality of tubes extending horizontally across said vessel, fins attached along the length of each of said tubes so as to depend downwardly therefrom thereby providing substantially solid material free gas spaces below said tubes, means to introduce reactant gas into said gas spaces, a plurality of means to withdraw gas from said vessel spaced apart from said gas spaces, and means to pass a heat exchange medium through said tubes.

2,469,330
METHOD FOR PREVENTING ARSENICAL INJURY TO PLANTS
John H. Davidson, United States Navy, South Haven, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application December 3, 1943, Serial No. 512,845
4 Claims. (Cl. 47—58)

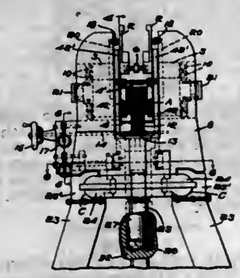


3. A method for preventing plant injury attributable to contact with acid lead arsenate which comprises the step of supplementing the conventional arsenical spray program by treatment of the plant surfaces during the summer growing season with a composition including a 2,4-dinitrophenol as an active ingredient.

2,469,331
ELECTRON TUBE
William W. Eitel, Woodside, and Jack A. McCullough, Millbrae, Calif., assignors to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application October 29, 1945, Serial No. 625,200
2 Claims. (Cl. 250—27.5)

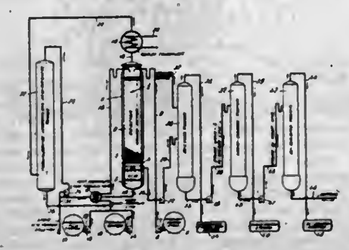
1. An electron tube comprising an envelope having an external anode at one end and a control grid terminal coaxial with the anode at the opposite end, an annular screen grid terminal coaxial with the control grid terminal and interposed in the envelope wall between the anode and said control grid terminal, a cathode in the envelope projecting into the anode, a control grid in the envelope surrounding the cathode and connected to the control grid terminal, a screen grid in the envelope surrounding the control grid and connected to the screen grid terminal, and a shield connecting the screen grid and screen grid terminal, said terminal and shield serving to screen the control grid terminal from the anode.

2,469,332
METHOD FOR CONVERSION OF HYDROCARBONS
Louis P. Evans, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application June 12, 1946, Serial No. 676,223
12 Claims. (Cl. 196—52)



1. A method for conversion of high boiling petroleum hydrocarbon charge to low boiling hydrocarbons within the gasoline boiling range which method comprises: heating said hydrocarbon charge to effect partial vaporization thereof, flashing said heated charge in a suitable confined flash zone to effect separation of the vaporized hydrocarbons from the liquid and passing the liquid hydrocarbons through a confined conversion zone in contact with concurrently flowing, partially spent particle-form contact material charged to said zone at an elevated conversion supporting temperature to effect conversion of said liquid hydrocarbons to lower boiling hydrocarbons, withdrawing lower boiling conversion products from said zone in the gaseous phase and passing said lower boiling products through a second zone in contact with freshly regenerated contact material charged to said zone at a suitable conversion temperature, passing said separated vaporized hydrocarbon charge through said second zone along with said lower boiling products from said first zone to effect conversion thereof, withdrawing gaseous conversion products from said second zone and passing the hot partially spent contact material from said second zone to said first zone as the contact material charge thereto.

2,469,333
MACHINE GUN MOUNT
Sydney T. Farrell and Frederick L. Farrell, Belmont, Mass.
Application August 12, 1943, Serial No. 498,300
3 Claims. (Cl. 89—37)

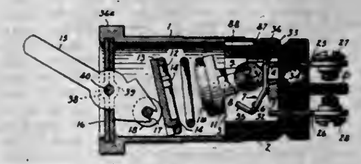


1. In a gun mount, the combination of a gun holder, supporting means for said holder including a base, spaced-apart upright side pieces located on the base, two sleeves slidably received in the side pieces, a core member extending between the two sleeve members, and presenting a scalloped peripheral surface lying in close proximity to a complementary scalloped surface formed on the inner periphery of the sleeve members, scalloped cushion members interposed between the said core member and adjacent complementary sleeve surfaces, said core being formed with reduced extremities which project into the side pieces, cushion elements for resiliently supporting said extremities in the side pieces, gear mechanism operatively connected to the core

for adjusting the position of the gun mount, a pair of supporting arms arranged at the under sides of the sleeve members, said arms having secured at their lower sides a plate member, a shaft located centrally of the base member, the

said shaft presenting at its upper extremity a cushion member extending into contact with the said plate and cooperating with the arms and plate to provide a shock-absorbing means which supplements the shock-absorbing action of the first two noted cushion elements.

2,469,334
HALOALKYLATION OF AROMATIC HYDROCARBONS
Howard D. Hartough, Pitman, and Paul K. Chung, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application March 31, 1945, Serial No. 586,000
5 Claims. (Cl. 260—651)



1. The continuous method for forming a haloalkylated aromatic compound, which comprises: intimately contacting an aromatic compound, with an aldehyde in aqueous solution and with a hydrogen halide in aqueous solution, in the presence of a contact material consisting of a solid, highly porous adsorptive material presenting a relatively large surface area of contact to the reactants in proportion to the volume, to form a reaction mixture containing said haloalkylated aromatic compound; separating said haloalkylated aromatic compound from said reaction mixture; and recycling the remainder of said reaction mixture in intimate contact with said adsorptive material.

2,469,335
CATALYTIC ALKYLATION
George C. Johnson, Woodbury, and Barton W. Rope, Mullica Hill, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application March 29, 1946, Serial No. 655,226
13 Claims. (Cl. 260—671)

1. In the process for alkylating alkylatable hydrocarbons, which includes contacting an alkylatable hydrocarbon with an alkylating agent, under alkylating conditions; the improvement which comprises contacting said alkylatable hydrocarbon with an alkylating agent, in the presence of the product obtained by reacting a fluophosphoric acid selected from the group consisting of monofluophosphoric acid and difluophosphoric acid, with boron trifluoride, as the catalyst.

2,469,336
SWITCH OR LIKE APPARATUS
Everard F. Kohl, Lakewood, Ohio
Application November 6, 1944, Serial No. 562,496
16 Claims. (Cl. 200—68)

1. An electrical switch comprising a stationary contact, a contact movable into and from engagement with the stationary contact, means engaging the movable contact to hold it in engagement with the stationary contact and being movable relative to the movable contact to disengage the movable contact from the stationary contact, resilient means associated with said engaging means, means including an actuator for biasing said resilient means to a position in which a component of the force of said resilient means is directed toward maintaining said engaging means in a position to hold the movable contact in engagement with the stationary contact, and said actuator being movable to compress a portion of said resilient means to a greater extent than other portions to incline said resilient means to a second position in which one component of its force moves said engaging means over the movable contact to disengage the movable contact from the stationary contact and the other component of its force acts through said engaging means to hold the movable contact in engagement with the stationary contact until the movable contact is disengaged from the stationary contact, and the inclination of said resilient means in its second position relative to the stationary contact being such that the component of the force of the resilient means which acts through said engaging means to hold the movable contact in engagement with the stationary contact is not less than the component of the force of said resilient means originally directed for a like purpose until said engaging means is in motion relative to said movable contact.

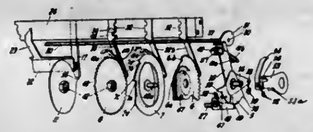
2,469,337
CONTROL APPARATUS FOR SWITCHES AND THE LIKE
Everard F. Kohl, Lakewood, Ohio
Application May 7, 1945, Serial No. 592,492
18 Claims. (Cl. 200—68)

1. Apparatus of the class described comprising a stationary contact and a movable contact, means for maintaining the movable contact in engagement with the stationary contact including a movable abutment provided with first and second grooves arranged adjacent opposite edges thereof, an actuator, means associated with said actuator including first and second inwardly extending prongs, resilient means for maintaining said actuator in a released position and the first prong in alignment with the first groove in said abutment when said abutment is in one position and said first prong being receivable in the first groove of said abutment to apply pressure to the abutment adjacent thereto to change its angular position when the actuator is moved inwardly, means responsive to the movement of said abutment for disengaging the stationary contact from the movable contact, and said resilient means being effective in returning said prongs to their normal position and for maintaining the second prong in alignment with the second groove in said abutment when the abutment is in the second position.

2,469,338
PREPARATION OF GUANIDINE PHOSPHATES
Johnstone S. Mackay, Old Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application December 24, 1946, Serial No. 718,274
7 Claims. (Cl. 260—564)

1. The process of preparing a guanidine phosphate comprising reacting urea with phosphorous pentoxide at a temperature within the range of substantially 190°–300° C. at atmospheric pressure.

2,469,339
REMOVABLE DENTURE
Robert J. Maniola, deceased, late of Chicago, Ill., by James J. Maniola, administrator, Chicago, Ill., assignor to James J. Maniola, Chicago, Ill.
Application September 16, 1947, Serial No. 774,335
14 Claims. (Cl. 32—6)

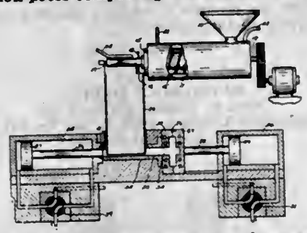


1. A denture for use in an edentulous space defined by undercut walls of two abutment teeth comprising a pair of denture sections adapted to be positioned consecutively in said space and each provided with remote end walls reciprocally shaped with respect to and adapted to contact the undercut surfaces of the respective teeth, said sections being provided with interfitting adjacent end walls reciprocally shaped to urge the sections in opposite directions as the second of said sections is pressed into interfitting relation with the first section within said space for thereby urging said remote end walls into contact with the said surfaces of the respective teeth for restraining vertical movement of the denture from said space, and a keying member comprising an artificial tooth mounted on said denture effective to maintain said sections in position in said edentulous space.

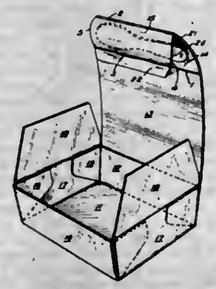
2,469,340
INSECTICIDAL USE OF FLUOROACETAMIDE
Nellie M. C. Payne, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 24, 1944, Serial No. 537,185
1 Claim. (Cl. 167—22)

A method of combatting insects, which comprises contacting them with a toxic amount of fluoroacetamide.

2,469,341
CYCLE TIMER
Frank Arthur Pearson, Moline, Ill., assignor to Eagle Signal Corporation, Moline, Ill., a corporation of Massachusetts
Application June 9, 1944, Serial No. 539,580
8 Claims. (Cl. 161—1)



1. In a timer for a plurality of operating electrical circuits, a movable switch element for each of said circuits, an operating cam for each of said switch elements, a shaft on which said cams are carried and by which they are rotated in contact with the switch elements, intermittently operating means for rotating said shaft, including pawl and ratchet mechanisms, and means adjustable at will for varying the time interval controlled by one of said switch elements, one of said ratchet mechanisms having a tooth omitted whereby to cause temporary discontinuance of the functioning of that mechanism.

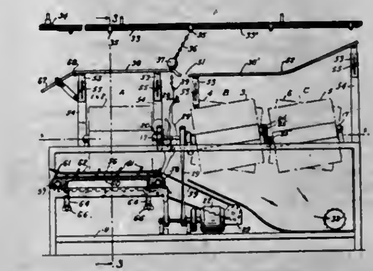


2,469,342
METHOD AND APPARATUS FOR MOLDING PLASTICS
Henry M. Richardson, Springfield, Mass., assignor, by direct and mesne assignments, of one-half to The Grotelite Company, Inc., Bellevue, Ky., a corporation of Kentucky, and one-half to Lima-Hamilton Corporation, Hamilton, Ohio, a corporation of Virginia
Application August 24, 1945, Serial No. 612,405
5 Claims. (Cl. 18—30)

1. The method of molding material which can be rendered plastic by heat, which comprises heating the material to a plastic condition, extruding the heated material in a column, severing from the column a length containing sufficient material for a mold charge, transferring the charge to a position with one end presented to a mold inlet while maintaining the columnar form and plastic condition in which it was extruded, and forcing the material into the mold by pressure against the other end of the column while confining the column against spreading outside of the mold.

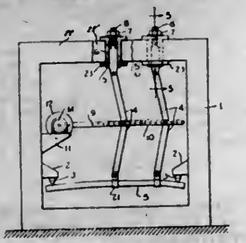
5. In combination a mixing and extruding device having a circular discharge nozzle, means to sever a predetermined length from the end of a column of material extruded from said nozzle, an injection press comprising means providing a cylindrical opening slightly larger in cross-section than the opening in said nozzle and as long as said predetermined length, a mold with circular inlet opening of the same diameter as said cylindrical opening, means to present the mold inlet in line with and against one end of the cylindrical opening, means providing a surface over which a severed charge can roll after severance to a position in line with said cylindrical opening, a plunger, and means to move the plunger to drive an alined charge into said cylindrical opening and through said opening and mold inlet into the mold, whereby a stiffly plastic column of extruded material may be severed in a mold charge and conveyed to and into a mold without deformation except inside of the mold.

2,469,343
SPOON PACKAGE
Edwin C. Siewert, Wausau, Wis., assignor to Marathon Corporation, Rothschild, Wis., a corporation of Wisconsin
Application March 7, 1946, Serial No. 652,604
1 Claim. (Cl. 229—1.5)



A carton comprising a tray portion and a hinged cover portion, said trap portion comprising front, rear, and end walls for retaining a product to be consumed, a cover portion hinged to the rear wall of said tray portion of suitable dimension for closing the open end of said tray portion, an extension panel hinged to said cover portion forming a tuck flap, a second extension panel hingedly connected to said first extension panel having the same width as said first extension panel and cut away at one end thereof so as to be shorter in length than said first extension panel, a glue panel hingedly connected to said second extension panel along a line parallel to said last named hinge connection and adhered to the inner face of said cover portion adjacent said first named hinge connection to bring said first and last named hinge connections into coinciding relation to provide a pocket portion for slidably receiving and retaining an implement for dispensing food packaged within said tray portion.

2,469,344
HOMOGENEOUS GASEOUS PHASE CATALYTIC ALKYLATION OF ISOBUTANE WITH CYCLOPROPANE
William A. Stover, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application December 20, 1946, Serial No. 717,609
10 Claims. (Cl. 260—683.4)



1. The process for producing high yields of triptane, which comprises contacting isobutane with cyclopropane, in gaseous phase and in a reaction zone under alkylating conditions including temperatures varying between about 700° F. and about 940° F. and pressures of at least about 500 pounds per square inch, in the presence of a halogen derivative of a hydrocarbon, and maintaining said isobutane in excess over said cyclopropane in said reaction zone, so that alkylation is the principal reaction.

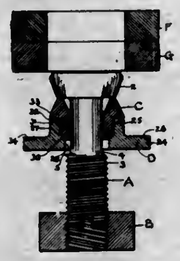
2,469,345
AUTOMATIC FOWL PICKER
Andrew J. Toti and Peter Princevalle, Modesto, Calif.
Application April 30, 1945, Serial No. 590,992
16 Claims. (Cl. 17—11.1)

3. Fowl picking apparatus comprising a set of flexible picker fingers movable in one general direction longitudinally of and against the body of a fowl placed within their path, a second set of flexible picker fingers movable generally in the opposite direction, means for so moving the two sets of picker fingers, and mechanical conveyor means for moving said body successively through the paths of both sets of flexible picker fingers, and means for revolving said body while subjected to the action of some of said fingers.

2,469,346
FATIGUE-TESTING MACHINE
Michael Watter, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 14, 1945, Serial No. 599,437
11 Claims. (Cl. 73—100)

9. In a testing machine, a frame, means on said frame for engaging longitudinally spaced points of a test specimen, a toggle extending transversely to the connecting line between said specimen engaging means and having its one end attached to said frame and its other end provided with a clamp for engaging the test specimen between said test specimen engaging means, said second end of the toggle and said clamp being free of engagement with and guidance by said frame, and means for imparting vibratory back and forth movement to the joint of said toggle.

2,469,347
UNITARY CHALK AND ERASER HOLDER
Pearl Raymond Windhorst, Oakland, Calif., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application December 16, 1948, Serial No. 65,641
3 Claims. (Cl. 35—67)



1. A unitary chalk and eraser holder comprising a vertical base adapted to be secured to a vertical surface, an eraser tray extending horizontally from the lower portion of the base, and a chalk tray extending laterally and upwardly from the base above the innermost portion of the eraser tray.

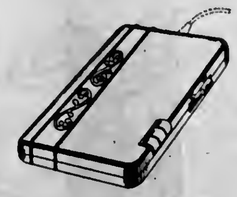
2,469,348
CELLULOSE DERIVATIVE COMPOSITIONS
Arthur E. Young and Elmer K. Stilbert, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application April 7, 1945, Serial No. 587,220
8 Claims. (Cl. 260—16)

1. A coating composition, the non-volatile ingredients of which consist essentially of from 45 to 65 per cent of an alkyd resin product of the reaction between a polyhydric alcohol containing at least 3 hydroxyl groups and a straight chain dicarboxylic aliphatic acid containing at least 4 carbon atoms; from 25 to 40 per cent of a cellulose derivative selected from the class consisting of the cellulose esters and cellulose ethers which are soluble in organic solvents; from 1 to 5 per cent of a resin selected from the class consisting of the thermosetting urea-formaldehyde and thermosetting melamine-formaldehyde resins which are soluble in organic solvents; and, from 5 to 20 per cent of a solvent plasticizer for the cellulose derivative, the said non-volatile ingredients being dissolved in a volatile organic solvent therefor, to provide a solution adapted for use in normal coating methods.

2,469,349
BLIND BOLT DEVICE
Kurt E. Zeidler, Chicago, Ill.
Application March 4, 1946, Serial No. 651,796
7 Claims. (Cl. 85—2.4)

7. A device for securing together two elements having registering apertures therein, said device comprising a bolt having a head and a shank, said shank provided with an annular shoulder spaced from said head, a split spring washer surrounding said shank between said head and shoulder, said spring washer having an upper part normally of larger outside diameter than said apertures and of lesser inside diameter than said bolt head, and a lower part normally of substantially the same outside diameter of said apertures, a nut having a screw threaded engagement with said bolt, and a retainer upon said bolt, between said shoulder and said nut, said retainer having a tubular part of substantially the same outside diameter as said apertures and a flange of larger diameter than said apertures, said retainer provided with a recess adapted to receive and hold the lower part of said washer when compressed so that said head and upper part of said washer may be passed through said apertures when said shoulder may force the washer from said retainer allowing said washer to be released and the lower part to engage the walls of said apertures, and when a tightening of said nut will draw the bolt head against said washer causing it to engage one of said elements and the nut will cause the retainer to engage the other of said elements, thereby holding said elements together.

DESIGNS

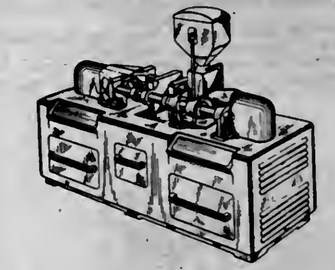


MAY 3, 1949

153,575
DESIGN FOR A CHILD'S SCOOTER
Richard H. Arbib, Huntington Woods, Mich., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application August 16, 1947, Serial No. 140,920
Term of patent 14 years
(Cl. D34—15)

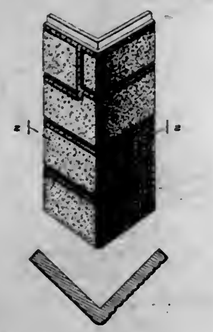
The ornamental design for a child's scooter, as shown.

153,576
DESIGN FOR A CASE FOR A HEARING AID AMPLIFIER UNIT
Reginald B. Bland, Newport News, Va.
Application December 5, 1947, Serial No. 142,963
Term of patent 3½ years
(Cl. D26—14)



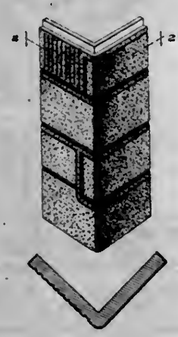
The ornamental design for a case for a hearing aid amplifier unit, as shown and described.

153,577
DESIGN FOR A CASE FOR A HEARING AID AMPLIFIER UNIT
Reginald B. Bland, Newport News, Va.
Application December 5, 1947, Serial No. 142,964
Term of patent 3½ years
(Cl. D26—14)



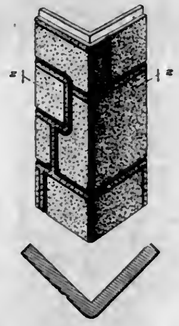
The ornamental design for a case for a hearing aid amplifier unit, as shown and described.

153,578
DESIGN FOR A MOLDING MACHINE OR THE LIKE
George S. Bohannon, Fort Worth, Tex.
Application April 30, 1946, Serial No. 129,132
Term of patent 7 years
(Cl. D55—1)



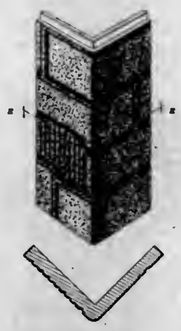
The ornamental design for a molding machine or the like, substantially as shown and described.

153,579
DESIGN FOR AN INSULATING SIDING CORNER UNIT
Robert D. Bordeaux, Chicago, Ill., assignor to Bird & Son, inc., East Walpole, Mass., a corporation of Massachusetts
Application October 8, 1948, Serial No. 149,048
Term of patent 14 years
(Cl. D68—1)



The ornamental design for an insulating siding corner unit, as shown.

153,580
DESIGN FOR AN INSULATING SIDING CORNER UNIT
Robert D. Bordeaux, Chicago, Ill., assignor to Bird & Son, inc., East Walpole, Mass., a corporation of Massachusetts
Application October 8, 1948, Serial No. 149,049
Term of patent 14 years
(Cl. D68—1)

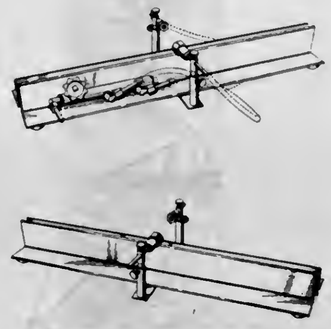


The ornamental design for an insulating siding corner unit, as shown.

153,581
DESIGN FOR AN INSULATING SIDING CORNER UNIT
Robert D. Bordeaux, Chicago, Ill., assignor to Bird & Son, inc., East Walpole, Mass., a corporation of Massachusetts
Application October 8, 1948, Serial No. 149,050
Term of patent 14 years
(Cl. D68—1)

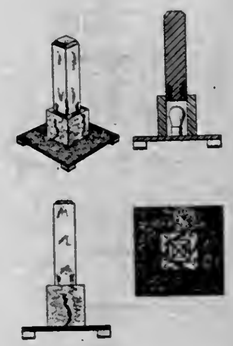
The ornamental design for an insulating siding corner unit, as shown.

153,582
DESIGN FOR AN INSULATING SIDING CORNER UNIT
Robert D. Bordeaux, Chicago, Ill., assignor to Bird & Son, inc., East Walpole, Mass., a corporation of Massachusetts
Application October 8, 1948, Serial No. 149,051
Term of patent 14 years
(Cl. D68—1)



The ornamental design for an insulating siding corner unit, as shown.

153,583
DESIGN FOR A BOTTLE CAP OR SIMILAR ARTICLE
Frederick M. Breen, White Plains, N. Y.
Application May 9, 1947, Serial No. 138,932
Term of patent 14 years
(Cl. D58—26)

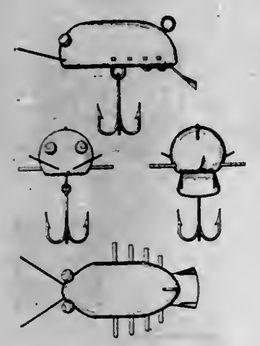


The ornamental design for a bottle cap or similar article, as shown.

153,584
DESIGN FOR AN AMPOULE SEALING DEVICE
John H. Brewer, Baltimore, Md., assignor to Hynson, Westcott & Dunning, Incorporated, Baltimore, Md., a corporation of Maryland
Application December 24, 1946, Serial No. 135,736
Term of patent 14 years
(Cl. D16—1)

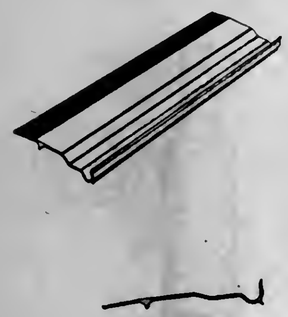
The ornamental design for an ampoule sealing device, substantially as shown and described.

153,585
DESIGN FOR A TRANSPARENT PRISM VANITY LAMP
Edward L. Culwell, Alameda, Calif.
Application June 14, 1948, Serial No. 146,962
Term of patent 14 years
(Cl. D48—20)



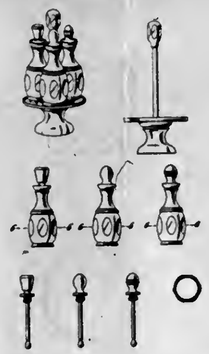
The ornamental design for a transparent prism vanity lamp, as shown.

153,586
DESIGN FOR A BOTTLE OR SIMILAR ARTICLE
Thomas D'Addario, New York, N. Y., assignor to The Johnnie Ryan Co., Niagara Falls, N. Y., a firm composed of John J. Janik and Stephen Janik
Application November 26, 1946, Serial No. 135,103
Term of patent 14 years
(Cl. D58—8)



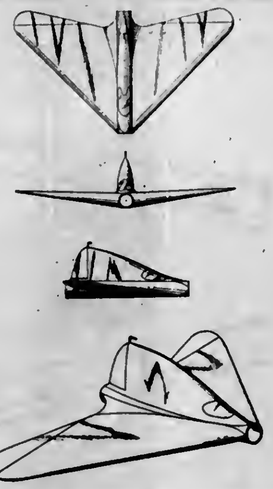
The ornamental design for a bottle or similar article, substantially as shown.

153,587
DESIGN FOR A FISH LURE
Andy Dolak, Flint, Mich.
Application October 10, 1947, Serial No. 141,862
Term of patent 3½ years
(Cl. D31—4)



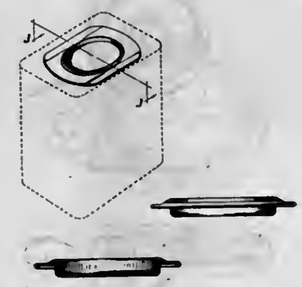
The ornamental design for a fish lure, as shown.

153,588
DESIGN FOR AN OVERHEAD TRIM FOR A WINDOW OR THE LIKE
Lewis Drnevich, East McKeesport, Pa.
Application October 19, 1946, Serial No. 134,105
Term of patent 7 years
(Cl. D54—2)



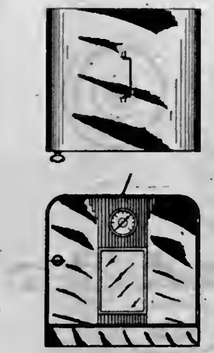
The ornamental design for an overhead trim for a window or the like, substantially as shown.

153,589
DESIGN FOR A COMBINATION CASTER AND PERFUME HOLDERS
Julius Duberstein, New York, N. Y.
Application November 13, 1947, Serial No. 142,503
Term of patent 3½ years
(Cl. D86—10)



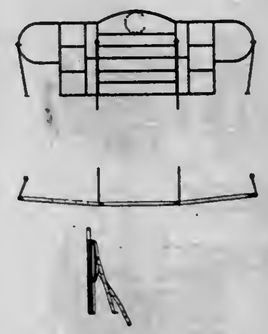
The ornamental design for a combination caster and perfume holders, substantially as shown and described.

153,590
DESIGN FOR AN AIRPLANE
Ellis V. Eichman, Brownsville, Tex.
Application December 5, 1947, Serial No. 142,962
Term of patent 14 years
(Cl. D71—1)



The ornamental design for an airplane, as shown.

153,591
DESIGN FOR A CAN OR SIMILAR ARTICLE
George C. Erb, Forest Hills West, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application February 18, 1946, Serial No. 126,678
Term of patent 14 years
(Cl. D58—17)

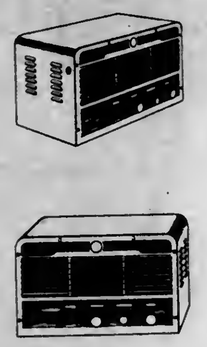


The ornamental design for a can or similar article, as shown and described.

153,592
DESIGN FOR AN OVEN
William Fader, Newark, N. J.
Application April 3, 1947, Serial No. 138,127
Term of patent 14 years
(Cl. D81—26)

The ornamental design for an oven, as shown and described.

153,593
DESIGN FOR AN AUTOMOBILE GRILLE GUARD
Frank J. Faulhaber, New York, N. Y.
Application August 23, 1947, Serial No. 141,020
Term of patent 3½ years
(Cl. D14—6)

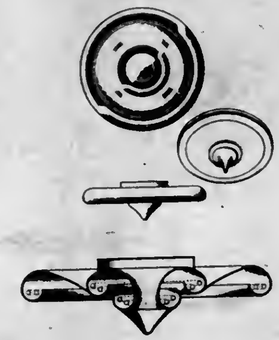


The ornamental design for an automobile grille guard, as shown and described.

153,594
DESIGN FOR A HANDBAG FRAME
Angelo J. Fieres, Hollis, Long Island, N. Y.
Application June 14, 1948, Serial No. 146,963
Term of patent 7 years
(Cl. D87—2)

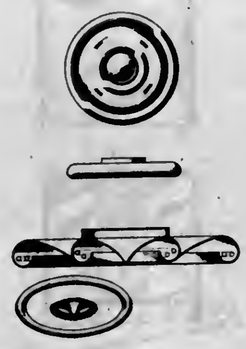
The ornamental design for a handbag frame, substantially as shown.

153,595
DESIGN FOR A MARINE RADIO TELEPHONE
Gordon W. Florian, Trumbull, Conn., assignor to Hudson American Corporation, New York, N. Y.
Application July 31, 1947, Serial No. 140,644
Term of patent 7 years
(Cl. D26—5)



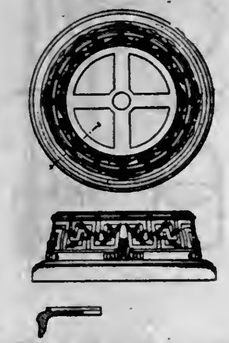
The ornamental design for a marine radio telephone, substantially as shown.

153,596
DESIGN FOR A COMBINED CALENDAR AND DESK PAD UNIT
Ernest Franki, New York, N. Y., assignor to Stickless Corporation, Bronx, N. Y., a corporation of New York
Application July 16, 1947, Serial No. 140,324
Term of patent 3½ years
(Cl. D74—5)



The ornamental design for a combined calendar and desk pad unit, as shown and described.

153,597
DESIGN FOR A LIGHTING FIXTURE
Irol G. Gangbin, Fresno, Calif.
Application January 26, 1948, Serial No. 144,918
Term of patent 14 years
(Cl. D48—23)

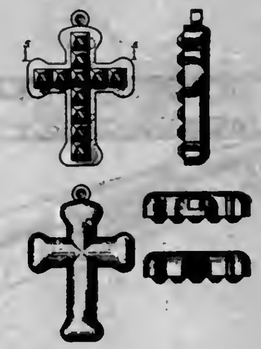


The ornamental design for a lighting fixture, as shown and described.

153,598
DESIGN FOR A DOUBLE COVE LIGHTING FIXTURE
Irol G. Gangbin, Fresno, Calif.
Application March 26, 1948, Serial No. 145,388
Term of patent 14 years
(Cl. D48—23)

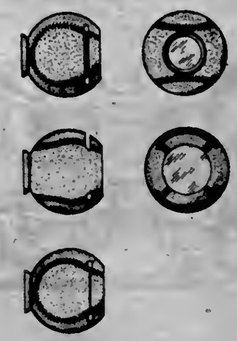
The ornamental design for a double cove lighting fixture, as shown and described.

153,599
DESIGN FOR A FLOOR LAMP BASE
Irving L. Gotliffe, New York, N. Y., assignor to Remsen Lamp Manufacturing Co., Brooklyn, N. Y., a partnership composed of Joseph Zweig and Benjamin Zweig
Application November 10, 1947, Serial No. 142,442
Term of patent 3½ years
(Cl. D48—20)



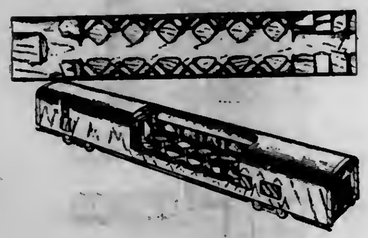
The ornamental design for a floor lamp base, as shown and described.

153,600
DESIGN FOR A BOTTLE
Elizabeth N. Graham, New York, N. Y.
Application March 16, 1948, Serial No. 145,109
Term of patent 14 years
(Cl. D58—6)



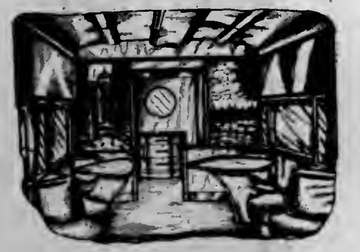
The ornamental design for a bottle, substantially as shown and described.

153,601
DESIGN FOR A CROSS
John J. Gresh, Evergreen Park, Ill.
Application March 5, 1947, Serial No. 137,356.
Term of patent 14 years
(Cl. D45—15)



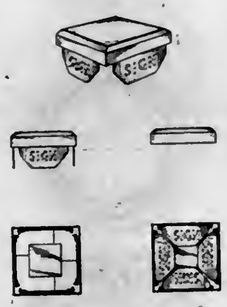
The ornamental design for a cross, substantially as shown.

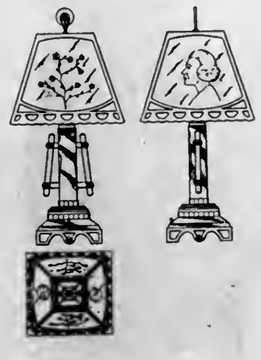
153,602
DESIGN FOR A SLIDE VIEWER
Percy H. Halbriter, Los Angeles, Calif.
Application June 7, 1948, Serial No. 146,815
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a slide viewer, substantially as shown.

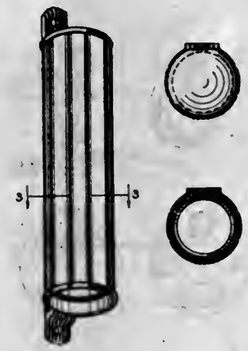
153,603
DESIGN FOR A RAILWAY DINING CAR BODY
Ralph W. Haman, Flossmoor, Ill., assignor to Pullman-Standard Car Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application September 20, 1947, Serial No. 141,499
Term of patent 14 years
(Cl. D66—1)





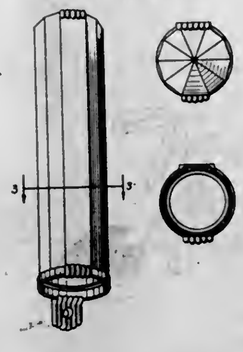
The ornamental design for a railway dining car body, substantially as shown and described.

153,604
DESIGN FOR A RETRACTABLE SIGN
John J. Hammer, Detroit, Mich.
Application April 12, 1946, Serial No. 128,551
Term of patent 7 years
(Cl. D1—12)



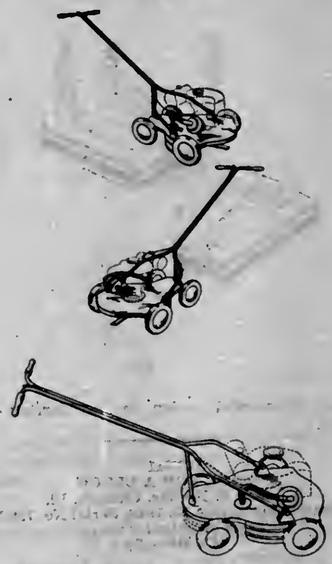
The ornamental design for a retractable sign, substantially as shown and described.

153,605
DESIGN FOR AN ELECTRIC TABLE LAMP
David Hewitt, New York, N. Y.
Application January 14, 1948, Serial No. 143,745
Term of patent 14 years
(Cl. D48—20)



The ornamental design for an electric table lamp, as shown.

153,606
DESIGN FOR A BILL CONTAINER
William E. Hilby, Indianapolis, Ind.
Application July 26, 1947, Serial No. 140,538
Term of patent 14 years
(Cl. D74—2)



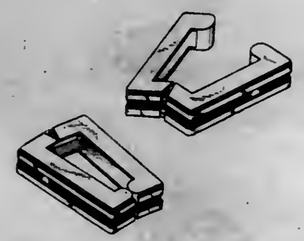
The ornamental design for a bill container, as shown and described.

153,607
DESIGN FOR A BILL CONTAINER
William E. Hilby, Indianapolis, Ind.
Application July 26, 1947, Serial No. 140,539
Term of patent 14 years
(Cl. D74—2)

The ornamental design for a bill container, as shown and described.

153,608
DESIGN FOR A MOWING MACHINE
Kell E. Hileman, Overland Park, Kans., assignor to National Metal Products Company, Kansas City, Mo.
Application June 24, 1946, Serial No. 130,966
Term of patent 14 years
(Cl. D40—1)

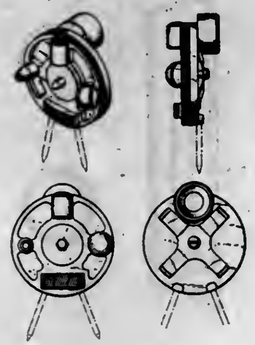
The ornamental design for a mowing machine, as shown and described.



153,609
DESIGN FOR A COMBINATION DENTAL FLOSS HOLDER AND CONTAINER OR SIMILAR ARTICLE
Peter Keane, Los Angeles, Calif.
Application October 4, 1947, Serial No. 141,755
Term of patent 7 years
(Cl. D24—1)

The ornamental design for a combination dental floss holder and container or similar article, substantially as shown.

153,610
DESIGN FOR AN EARRING
Leopold D. Kline, Kew Gardens, N. Y.
Application February 19, 1948, Serial No. 144,593
Term of patent 14 years
(Cl. D45—9)

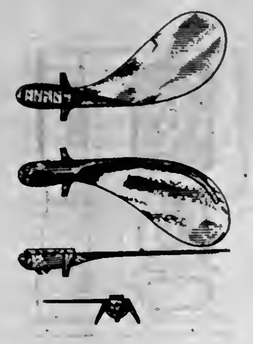


The ornamental design for an earring, as shown.

153,611
DESIGN FOR A CLOCK
Solomon E. Koplar, Chicago, Ill.
Application December 13, 1948, Serial No. 150,121
Term of patent 7 years
(Cl. D42—7)

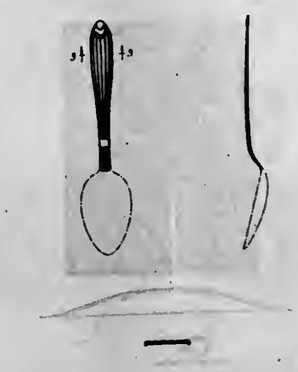
The ornamental design for a clock, substantially as shown.

153,612
DESIGN FOR A LAWN SPRINKLER
Otto A. Langes, Chicago, Ill.
Application September 25, 1947, Serial No. 141,579
Term of patent 14 years
(Cl. D91—1)



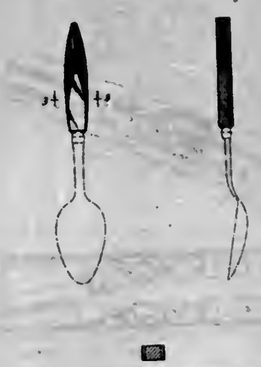
The ornamental design for a lawn sprinkler, substantially as shown and described.

153,613
DESIGN FOR A SHOE
Saul Litvack, New York, N. Y., assignor to Dronoff Shoe Products Inc., Carlisle, Pa.
Application February 5, 1949, Serial No. 704
Term of patent 3½ years
(Cl. D7—7)



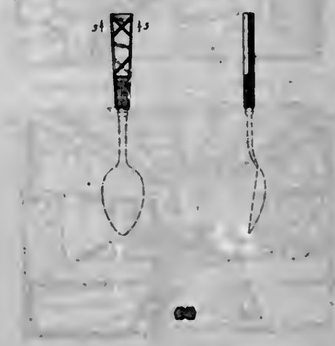
The ornamental design for a shoe, substantially as shown and described.

153,614
DESIGN FOR A SPINNING AERIAL CARGO TOY
David W. Main, Denver, Colo.
Application June 18, 1947, Serial No. 139,789
Term of patent 14 years
(Cl. D34—15)



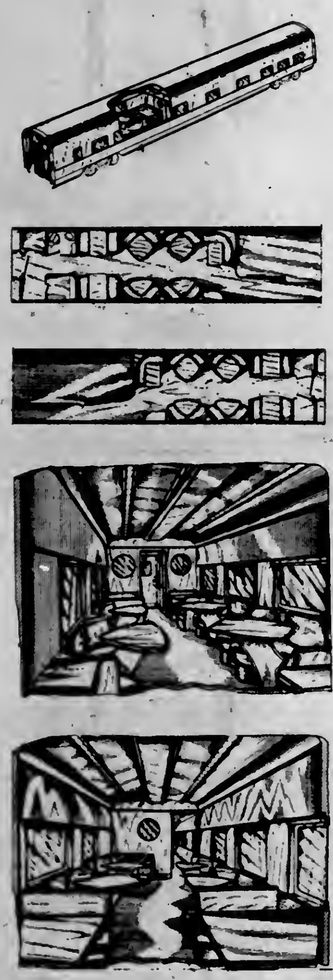
The ornamental design for a spinning aerial cargo toy, as shown.

153,615
DESIGN FOR A SPOON OR SIMILAR ARTICLE OF TABLEWARE
Norman J. Mercer, Brooklyn, N. Y.
Application October 21, 1946, Serial No. 134,118
Term of patent 14 years
(Cl. D54—12)



The ornamental design for a spoon or similar article of tableware, substantially as shown and described.

153,616
DESIGN FOR A SPOON OR SIMILAR ARTICLE OF TABLEWARE
Norman J. Mercer, Brooklyn, N. Y.
Application October 21, 1946, Serial No. 134,119
Term of patent 14 years
(Cl. D54—12)



The ornamental design for a spoon or similar article of tableware, substantially as shown and described.

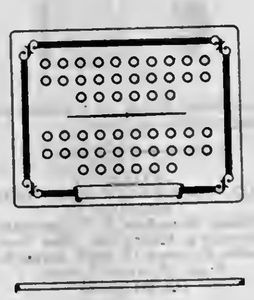
153,617
DESIGN FOR A SPOON OR SIMILAR ARTICLE OF TABLEWARE
Norman J. Mercer, Brooklyn, N. Y.
Application October 21, 1946, Serial No. 134,120
Term of patent 14 years
(Cl. D54—12)

The ornamental design for a spoon or similar article of tableware, substantially as shown and described.

153,618
DESIGN FOR A RAILWAY DINING CAR BODY
Frank L. Murphy, Chicago, and Ralph W. Haman, Flossmoor, Ill., assignors to Pullman-Standard Car Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application September 20, 1947, Serial No. 141,500
Term of patent 14 years
(Cl. D66—1)

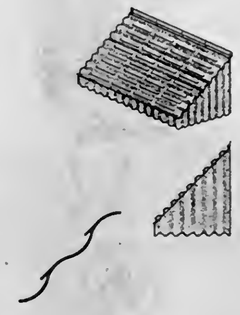
The ornamental design for a railway dining car body, substantially as shown and described.

153,619
DESIGN FOR A CLOCK
Adolph J. Nelson, Oak Park, Ill., assignor to Boyco, Inc., Chicago, Ill., a corporation of Illinois
Application October 8, 1948, Serial No. 149,041
Term of patent 3½ years
(Cl. D42—7)



The ornamental design for a clock, as shown.

153,620
DESIGN FOR A PLEATED FABRIC
Robert J. Nelson, New York, N. Y.
Application August 25, 1947, Serial No. 141,066
Term of patent 14 years
(Cl. D92—1)



The ornamental design for a pleated fabric, as shown.

153,621
DESIGN FOR AN EDUCATIONAL GAME BOARD
Sarah Anne Patterson, Edgewater, Colo.
Application April 7, 1947, Serial No. 138,204
Term of patent 14 years
(Cl. D25—1)

The ornamental design for an educational game board, as shown.

153,622
DESIGN FOR A LOUVERED CORRUGATED METAL AWNING
Simeon Kenneth Peeples, Wichita, Kans., assignor of fifty per cent to Air Products, Inc., Pittsburg, Kans., a corporation of Kansas
Application January 12, 1948, Serial No. 143,662
Term of patent 14 years
(Cl. D21—6)

The ornamental design for a louvered corrugated metal awning, substantially as shown and described.

153,623
DESIGN FOR A RAIN HOOD OR SIMILAR ARTICLE
William J. Peters, New York, N. Y.
Application June 10, 1947, Serial No. 139,559
Term of patent 3½ years
(Cl. D3—13)

The ornamental design for a rain hood or similar article, as shown.

153,624
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 4, 1949, Serial No. 43
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

153,625
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 4, 1949, Serial No. 44
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

153,626
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 4, 1949, Serial No. 45
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

153,627
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 4, 1949, Serial No. 48
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

153,628
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 8, 1949, Serial No. 145
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

153,629
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 15, 1949, Serial No. 255
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

153,630
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 15, 1949, Serial No. 256
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

153,631
DESIGN FOR A TABLE LIGHTER
Alfred F. Reilly, North Attleboro, Mass., assignor to Evans Case Co., a corporation of Massachusetts
Application July 26, 1948, Serial No. 147,781
Term of patent 14 years
(Cl. D48—27)

The ornamental design for a table lighter, substantially as shown and described.

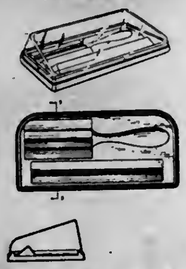
153,632
DESIGN FOR A TABLE LIGHTER
Alfred F. Reilly, North Attleboro, Mass., assignor to Evans Case Co., a corporation of Massachusetts
Application July 26, 1948, Serial No. 147,782
Term of patent 14 years
(Cl. D48—27)

The ornamental design for a table lighter, substantially as shown and described.

153,633
DESIGN FOR A TABLE LIGHTER
Alfred F. Reilly, North Attleboro, Mass., assignor to Evans Case Co., a corporation of Massachusetts
Application July 26, 1948, Serial No. 147,783
Term of patent 14 years
(Cl. D48—27)

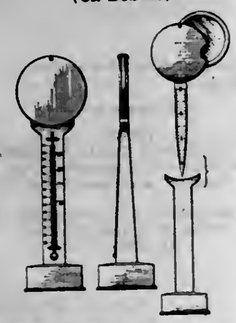
The ornamental design for a table lighter, substantially as shown.

153,634
DESIGN FOR A TABLE LIGHTER
Alfred F. Reilly, North Attleboro, Mass., assignor to Evans Case Co., a corporation of Massachusetts
Application July 26, 1948, Serial No. 147,784
Term of patent 14 years
(Cl. D48—27)



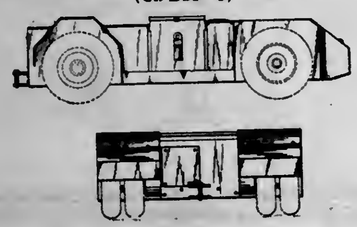
The ornamental design for a table lighter, substantially as shown.

153,635
DESIGN FOR A TABLE LIGHTER
Alfred F. Reilly, North Attleboro, Mass., assignor to Evans Case Co., a corporation of Massachusetts
Application July 29, 1948, Serial No. 147,821
Term of patent 14 years
(Cl. D48—27)



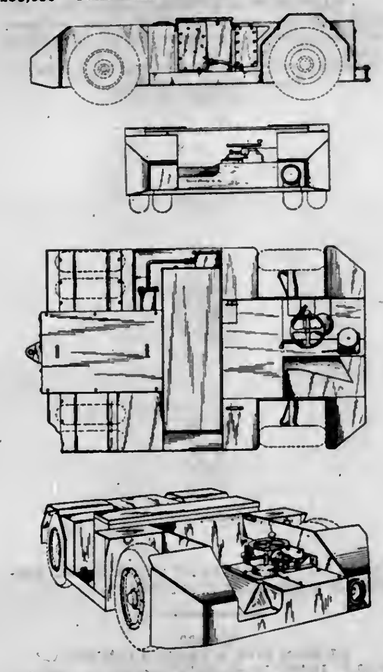
The ornamental design for a table lighter, substantially as shown and described.

153,636
DESIGN FOR A DISPLAY CONTAINER
Jean O. Reinecke, Oak Park, Ill., assignor to Lactona Incorporated, St. Paul, Minn.
Application June 20, 1947, Serial No. 139,838
Term of patent 3½ years
(Cl. D60—5)



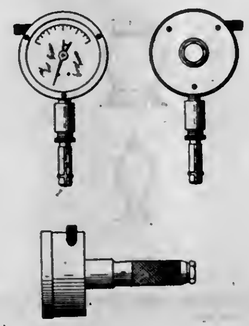
The ornamental design for a display container, as shown.

153,637
DESIGN FOR A COMBINATION DESK UNIT
Ernest H. Reiss, Floral Park, N. Y.
Application June 26, 1947, Serial No. 139,945
Term of patent 14 years
(Cl. D52—7)

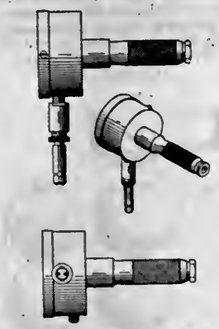


The ornamental design for a combination desk unit, substantially as shown.

153,638
DESIGN FOR A POWER DRIVEN TRACTOR
Edward H. Remde, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a corporation of Ohio
Application July 31, 1947, Serial No. 140,643
Term of patent 14 years
(Cl. D14—3)

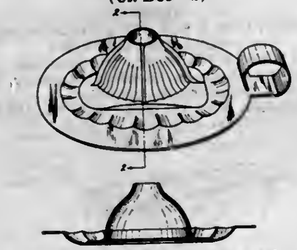


153,638—Continued

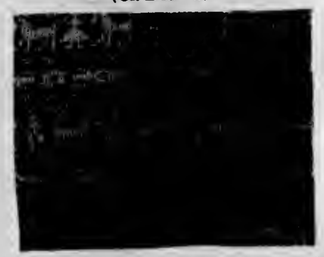


The ornamental design for a power driven tractor, as shown and described.

153,639
DESIGN FOR A PORTABLE PNEUMATIC GAUGE
Frederick L. Rupley, Cincinnati, Ohio, assignor to Merz Engineering Company, Indianapolis, Ind., a corporation of Indiana
Application July 22, 1948, Serial No. 131,791
Term of patent 7 years
(Cl. D52—1)



153,639—Continued

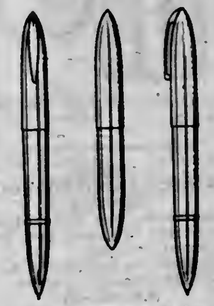


The ornamental design for a portable pneumatic gauge, substantially as shown.

153,640
DESIGN FOR AN ASH TRAY
Adolph Schertz, Youngstown, Ohio
Application July 27, 1948, Serial No. 147,800
Term of patent 3½ years
(Cl. D85—2)

The ornamental design for an ash tray, as shown and described.

153,641
DESIGN FOR A KNITTED FABRIC
May Sidore, Manchester, N. H., assignor to Pandora Knitwear, Inc., New York, N. Y., a corporation of New York
Application October 7, 1947, Serial No. 141,777
Term of patent 7 years
(Cl. D45—2)

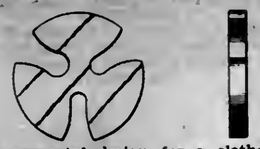


The ornamental design for a knitted fabric, substantially as shown.

153,642
DESIGN FOR A CHRISTMAS TREE ORNAMENT
Richard J. Silverman, Brooklyn, N. Y.
Application March 15, 1948, Serial No. 145,095
Term of patent 3½ years
(Cl. D29—1)

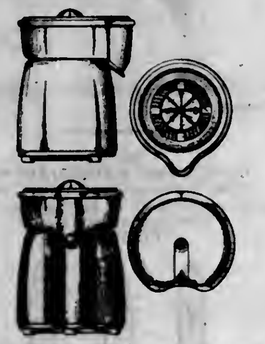
The ornamental design for a Christmas tree ornament, as shown.

153,643
DESIGN FOR A FOUNTAIN PEN
John A. Snodgrass, Prescott, Ark.
Application September 21, 1946, Serial No. 133,487
Term of patent 14 years
(Cl. D74—17)



The ornamental design for a fountain pen, as shown and described.

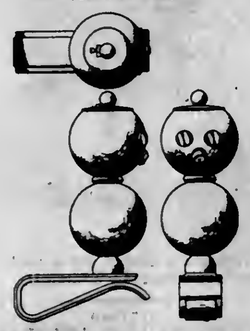
153,644
DESIGN FOR A CLOTHESPIN
James Stanley, Sr., and James Stanley, Jr., New York, N. Y.
Application July 10, 1947, Serial No. 140,206
Term of patent 14 years
(Cl. D17—6)



153,644—Continued

The ornamental design for a clothespin, as shown and described.

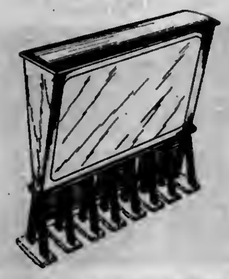
153,645
DESIGN FOR AN ELECTRIC FRUIT JUICER
Harry L. Stiles, Chicago, Ill., assignor to Chicago Electric Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application October 10, 1947, Serial No. 141,855
Term of patent 14 years
(Cl. D32—1)



The ornamental design for an electric fruit juicer, as shown.

153,646
DESIGN FOR A RADIO PHONOGRAPH CABINET
Leland George Stone, Fort Wayne, Ind., assignor to The Magnavox Company, Fort Wayne, Ind., a corporation of Delaware
Application April 24, 1947, Serial No. 138,595
Term of patent 7 years
(Cl. D56—4)

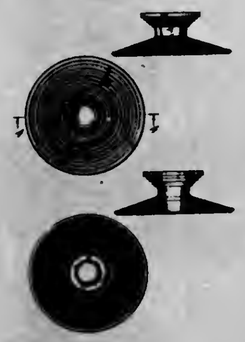
The ornamental design for a radio phonograph cabinet, substantially as shown.



153,647
DESIGN FOR A CRIB TOY OR THE LIKE
Elmer Szantay, Chicago, Ill., assignor to Sandee Manufacturing Company
Application March 26, 1948, Serial No. 145,382
Term of patent 14 years
(Cl. D34—15)

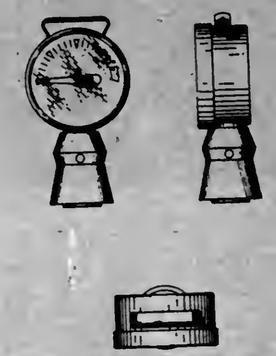
The ornamental design for a crib toy or the like, as shown.

153,648
DESIGN FOR A SCREEN BUILDING FOR AN OUTDOOR THEATRE
Samuel Herbert Taylor, Jr., Merchantville, N. J., assignor to Park-In Theatres Company, Camden, N. J., a limited partnership
Application April 21, 1947, Serial No. 138,527
Term of patent 14 years
(Cl. D13—1.2)



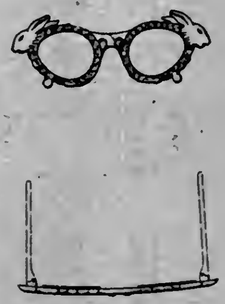
The ornamental design for a screen building for an outdoor theatre, as shown and described.

153,649
DESIGN FOR A DRESS
Robert Trigère, New York, N. Y.
Application September 4, 1948, Serial No. 148,479
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

153,650
DESIGN FOR A CANDLESTICK OR THE LIKE
Bernard Ulvad, Leominster, Mass., assignor, by mesne assignments, to Foster Grant Co., Inc., Leominster, Mass., a corporation of Massachusetts
Application August 20, 1948, Serial No. 148,203
Term of patent 14 years
(Cl. D48—2)

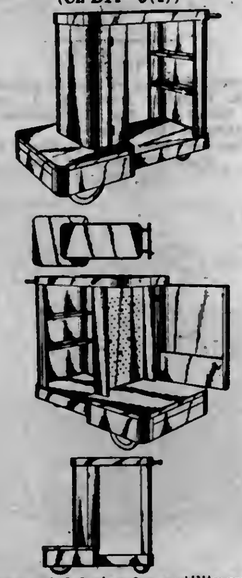


The ornamental design for a candlestick or the like, substantially as shown.

153,651
DESIGN FOR A COMBINED PRESSURE GAUGE AND RELIEF VALVE OR SIMILAR ARTICLE
Ralph D. Waite, Sellersville, Pa., assignor to American Machine and Metals, Inc., New York, N. Y., a corporation of Delaware
Application August 24, 1948, Serial No. 152,840
Term of patent 7 years
(Cl. D52—1)

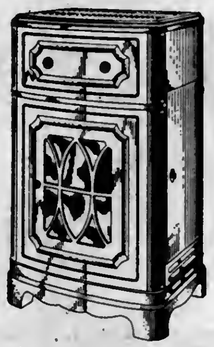
The ornamental design for a combined pressure gauge and relief valve or similar article, as shown.

153,652
DESIGN FOR A SUNGLASS FRAME
Joseph R. Watkins, Dover, N. J., assignor to Foster Grant Co., Inc., Leominster, Mass., a corporation of Massachusetts
Application December 14, 1948, Serial No. 150,155
Term of patent 14 years
(Cl. D57—1)



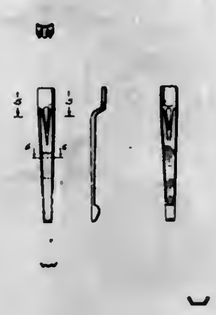
The ornamental design for a sunglass frame, substantially as shown and described.

153,653
DESIGN FOR A TEXTILE FABRIC
Sol Weinberg, New York, N. Y.
Application May 1, 1948, Serial No. 146,119
Term of patent 3½ years
(Cl. D92—1)



The ornamental design for a textile fabric, substantially as shown.

153,654
DESIGN FOR A UTILITY WAGON
Adolph H. Wende, St. Louis, Mo., assignor to Henry Kleinkauf, Omaha, Nebr., Emil Haas and Henry Gould, both of Kansas City, Mo., Alfred Natkin, Houston, Tex., Bertram M. Natkin, Clayton, Mo., and Samuel J. Shure, St. Louis, Mo., doing business as Natkin & Company, Brentwood, Mo.
Application April 24, 1948, Serial No. 145,940
Term of patent 14 years
(Cl. D14—3(4))



The ornamental design for a utility wagon, substantially as shown.

153,655
DESIGN FOR A CABINET FOR A HEATER OR THE LIKE
Lawrence H. Wilson, Detroit, Mich., assignor to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application February 17, 1948, Serial No. 144,555
Term of patent 7 years
(Cl. D81—19)

The ornamental design for a cabinet for a heater or the like, substantially as shown and described.

153,656
DESIGN FOR A PENCIL CLIP OR SIMILAR ARTICLE
Frank Winter, Lincolnwood, Ill., assignor to Autopoint Company, Chicago, Ill., a corporation of Illinois
Application January 4, 1947, Serial No. 135,944
Term of patent 14 years
(Cl. D74—2)

The ornamental design for a pencil clip or similar article, substantially as shown and described.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Abbott Laboratories, North Chicago, Ill. Antispasmodic, sedative, and expectorant. Serial No. 548,211, May 3. Class 6.

Abraham & Straus, Inc., Brooklyn, N. Y. Electric clocks. Serial No. 562,432, May 3. Class 27.

Ackerman, Mary D., Mechanicsburg, Ohio. Children's overalls, pajamas, snowsuits, etc. Serial No. 540,358, May 3. Class 39.

CLASSIFIED LIST OF TRADE-MARKS REGISTERED

CLASS 1

Carbon black. Thermatomic Carbon Company. 256,985, renewed May 28, 1949. O. G. May 3.

Cellinlid. Société Chimique des Usines du Rhone Anciennement Gilliard, P. Monnet et Cartier. 123,286, Oct. 22, 1918. Republished May 3.

Coal. Bell & Zoller Coal Company. 356,483, Apr. 26, 1938. Republished May 3.

Coal. Bell & Zoller Coal Company. 357,114–15, May 24, 1938. Republished May 3.

Coal. Bell & Zoller Coal Company. 358,799, July 26, 1938. Republished May 3.

Coal. Bell & Zoller Coal Company. 359,190, Aug. 9, 1938. Republished May 3.

Coal. Bell & Zoller Coal Company. 359,203, Aug. 9, 1938. Republished May 3.

Coal. Bell & Zoller Coal Company. 360,015, Sept. 6, 1938. Republished May 3.

Coal. Bell & Zoller Coal Company. 401,132, Apr. 27, 1943. Republished May 3.

Grains, Seed. Terminal Grain Company. 509,250, May 3; Serial No. 527,023, published Jan. 11, 1949.

Leather. The Griess-Pfleger Tanning Co. 203,728, Sept. 22, 1925. Republished May 3.

Leather. The Griess Pfleger Tanning Co. 221,903, Dec. 14, 1926. Republished May 3.

Leather. The Griess Pfleger Tanning Co. 230,371, July 19, 1927. Republished May 3.

Leathers, Uncut. Pfister and Vogel Leather Company. 69,576–7, June 23, 1908. Republished May 3.

Seed corn. J. I. and C. V. Simpson. 437,546, Mar. 30, 1948. Republished May 3.

Seed, Grass. Katz Drug Company. 347,145, June 15, 1937. Republished May 3.

CLASS 2

Accessories, Closet. Hervey Associates. 442,594, May 3; Serial No. 500,082, published Jan. 18, 1949.

Bags and envelopes, Heat sealable metal foil merchandise. Traver Corporation. 509,479, May 3; Serial No. 516,157.

Bags, Paper. Union Bag & Paper Corporation. 252,651, renewed Feb. 12, 1949. O. G. May 3.

Bottles and cans. Bol, Ltd. 442,587, May 3; Serial No. 489,644, published Jan. 18, 1949.

Boxes. Chicago Carton Company. 509,253, May 3; Serial No. 528,012, published Jan. 18, 1949.

Boxes and cartons, Shipping, shipping bags, etc. The Kalart Company Inc. 442,624, May 3; Serial No. 519,957, published Jan. 25, 1949.

Crates. Cummer Mfg. Co. 74,125, re-renewed June 22, 1949. O. G. May 3.

Envelopes, Merchandise. United States Envelope Company. 442,636, May 3; Serial No. 524,638, published Jan. 18, 1949.

Holders and dispensers, receptacles, Metal. The Menasha Products Company. 293,387, Apr. 19, 1932. Republished May 3.

Linings, Impervious corrosion-resistant plastic. The B. F. Goodrich Company. 442,608, May 3; Serial No. 512,232, published Jan. 11, 1949.

Rings, Finger, necklaces, bracelets, etc. Cohn & Rosenberger, Inc. 268,553, Mar. 18, 1930. Republished May 3.

Training devices composed of a tray and compartmented food dish. Stout-Lindsay, Inc. 442,596, May 3; Serial No. 500,635, published Jan. 11, 1949.

CLASS 3

Handbags, Ladies'. Empress Hand Bag Co., Inc. 509,533, May 3; Serial No. 558,290.

Purses and handbags, Children's. The Newtons. 509,521, May 3; Serial No. 549,651.

Rings, Finger, necklaces, bracelets, etc. Cohn & Rosenberger, Inc. 268,553, Mar. 18, 1930. Republished May 3.

Trunks, suitcases, and traveling bags. Shwayder Bros., Inc. 366,822, May 2, 1939. Republished May 3.

CLASS 4

Cleaner. The Tedlock Company. 509,468, May 3; Serial No. 509,478.

Cleaner both caustic and abrasive, oil soaps, metal polish, nickel paste. Red Spot Paint & Varnish Co. 268,355, Mar. 11, 1930. Republished May 3.

Cleaner, cleanser, and detergent, Sudsing. The Procter & Gamble Company. 438,322–3, Apr. 13, 1948. Republished May 3.

Cleaner, cleanser, and detergent, Sudsing. The Procter & Gamble Company. 438,330, Apr. 13, 1948. Republished May 3.

Cleaner, cleanser, and detergent, Sudsing. The Procter & Gamble Company. 438,342, Apr. 13, 1948. Republished May 3.

Cleaner, cleanser, and detergent, Sudsing. The Procter & Gamble Company. 438,357, Apr. 13, 1948. Republished May 3.

Cleanser. Henry Mitchell. 509,463, May 3; Serial No. 505,848.

Cloths, Chemically-treated. E. C. Walker. 243,695, June 26, 1928. Republished May 3.

Compounds, Cleaning. The Grasselli Chemical Company. 257,094, renewed May 28, 1949. O. G. May 3.

Oils and greases used in stuffing and finishing leather. Sterling Oil Company. 64,179, July 30, 1907. Republished May 3.

Shaving cream and brushless shaving cream. Dasco Products Co., Inc. 331,266, Dec. 31, 1935. Republished May 3.

Soap, perfumery, and toilet preparations. M. Beetham & Son. 32,938, re-renewed May 23, 1949. O. G. May 3.

Washing fluid. California Bleaching Water Co., Inc. 254,269, renewed Mar. 19, 1949. O. G. May 3.

CLASS 5

Adhesive, Liquid. Robeson Process Company. 75,487, Oct. 5, 1909. Republished May 3.

Adhesive, Liquid. Robeson Process Company. 255,202, Apr. 16, 1929. Republished May 3.

Adhesive with rubber or resin base, Liquid. United States Rubber Company. 509,462, May 3; Serial No. 501,098.

Gum, Manufactured. American Gum Products Co., 92,500, July 15, 1913. Republished May 3.

Tape, Friction, rubber tape, glue, etc. The George Worthington Company. 349,696, Aug. 31, 1937. Republished May 3.

CLASS 6

Antacid. G. P. Stine. 509,522, May 3; Serial No. 549,079.

Astringents, astringent cerates, bleach creams, etc. The Boyd Manufacturing Company. 240,185, Mar. 20, 1928. Republished May 3.

Bicarbonate, Sodium, epsom salt, boric acid, cough syrup, etc. Purepac Corporation. 509,502, May 3; Serial No. 537,021.

Chemicals, Organic odoriferous and flavor-imparting, etc. Givaudan-Delawanna, Inc. 509,413, May 3; Serial No. 544,816, published Jan. 11, 1949.
Cleanser, Scalp, and haledressing. Tom's Scalpade, Inc. 509,212, May 3; Serial No. 508,353, published Jan. 18, 1949.
Cosmetics and toilet preparations. Puritan Drug Company. 438,645, May 11, 1948. Republished May 3.
Deodorant. Hillyard Chemical Company. 245,894, Aug. 28, 1928. Republished May 3.
Dyes, Aniline. Orleans Company, Inc. 442,631, May 3; Serial No. 523,798, published Jan. 11, 1949.
Dyes, dyestuffs, and colors. The Newport Company. 252,456, renewed Feb. 5, 1949. O. G. May 3.
Dyestuffs. Geigy Company, Inc. 252,557, renewed Feb. 12, 1949. O. G. May 3.
Extractions, absolutes, concretes, Floral, etc. Fritzsche Brothers, Inc. 434,065, Nov. 4, 1947. Republished May 3.

Varnishes. W. W. Lawrence & Company. 509,360, May 3; Serial No. 538,775, published Dec. 28, 1948.
Wax finish. U. S. Sanitary Specialties Corporation. Serial No. 531,633, published Sept. 28, 1948.
Wax for floors. Franklin Research Company. 509,405, May 3; Serial No. 543,806, published Dec. 28, 1948.

CLASS 17

Cigarettes. Stephano Brothers. 509,433, May 3; Serial No. 549,592, published Dec. 28, 1948.
Cigarettes, cigars, smoking tobacco, and chewing tobacco. W. R. Allen. 67,773, Feb. 18, 1908. Republished May 3.
Cigars. Webster Eisenlohr, Inc. 332,408, Feb. 18, 1936. Republished May 3.
Cigars. Jose Escalante & Co. 509,295, May 3; Serial No. 532,935, published Dec. 28, 1948.
Cigars. H. Fendrich. 72,615, re-renewed Feb. 9, 1949. O. G. May 3.
Cigars. Annie Gradias & Co., Inc. 509,440, May 3; Serial No. 552,310, published Jan. 4, 1949.
Cigars. Frank P. Lewis Cigar Co. 254,928, renewed Apr. 2, 1949. O. G. May 3.
Cigars. P. Lorillard Company. 442,630, May 3; Serial No. 525,631, published Jan. 4, 1949.
Cigars. P. Lorillard Company. 509,358, May 3; Serial No. 538,553, published Jan. 11, 1949.
Cigars and little cigars. Mi Favorita Cigar Co., Inc. 109,022, Mar. 14, 1916. Republished May 3.
Tobacco and tobacco products. Larus & Brother Company, Inc. 509,436, May 3; Serial No. 550,331, published Dec. 28, 1948.
Tobacco, Smoking. The BBB Company, Limited. 341,943, Dec. 29, 1936. Republished May 3.
Tobacco, Smoking. E. A. Kolpin, Jr. 509,432, May 3; Serial No. 540,449, published Dec. 28, 1948.
Tobacco, Smoking. John Sinclair Limited. 158,812, Sept. 12, 1922. Republished May 3.

CLASS 19

Bicycles and bicycle frames, forks, handle bars, grips, etc. The George Worthington Company. 348,582, Aug. 3, 1937. Republished May 3.
Braking mechanisms and parts, Friction, recoil checks, shock-absorbing mechanisms. John Warren Watson Company. 249,591, Nov. 20, 1928. Republished May 3.

CLASS 21

Agitating and paper aligning machines, Electrically operated. M. L. Abrams Company. 442,603, May 3; Serial No. 506,720, published Dec. 21, 1948.
Batteries, Electric storage. Solar Corporation. 509,403, May 3; Serial No. 543,756, published Jan. 4, 1949.
Batteries, Storage. Delco-Remy Corporation. 253,644, renewed Mar. 5, 1949. O. G. May 3.
Blankets, Electrical. M. Shoeld. 509,243, May 3; Serial No. 526,681, published Dec. 21, 1948.
Cells, Dry primary. National Carbon Company, Inc. 509,456, May 3; Serial No. 567,595, published Jan. 11, 1949.
Coating compound, Electrical insulating liquid. R. A. Hood. 509,465, May 3; Serial No. 506,044.
Coil and condenser assemblies. Automatic Manufacturing Corporation. 509,336, May 3; Serial No. 536,482, published Dec. 21, 1948.
Condensers, Electrical. Sprague Specialties Co. 313,293, May 22, 1934. Republished May 3.
Condensers, Electrolytic, electrostatic condensers, electrical filters, etc. Sprague Electric Company. 509,306, May 3; Serial No. 534,482, published Dec. 21, 1948.
Control equipment for use in electrical communication service. The Daven Company. 509,244, May 3; Serial No. 526,829, published Dec. 28, 1948.
Disintegrator and mixer, Electrical, electrical steam irons. Waring Products Corporation. 509,471, May 3; Serial No. 512,139.
Electrical apparatus. The Rajah Company. 509,372, May 3; Serial No. 530,811, published Jan. 18, 1949.
Eliminators, Battery. Briggs & Stratton Corporation. 226,247, renewed Apr. 5, 1947. O. G. May 3.
Fans, Electric. The O. A. Sutton Corporation, Inc. 506,417, May 3; Serial No. 545,558, published Dec. 28, 1948.
Flashlights and batteries. Barney & Berry, Inc. 253,320, renewed Feb. 26, 1940. O. G. May 3.
Flood lights, Electrical. S & M Lamp Co., Incorporated. 509,353, May 3; Serial No. 537,736, published Dec. 21, 1948.
Fuse switches. J. R. Kearney Corporation. 509,305, May 3; Serial No. 534,451, published Jan. 11, 1949.
Fuses and fuse links. James R. Kearney Corporation. 509,352, May 3; Serial No. 537,704, published Jan. 11, 1949.
Generators and spare parts, etc., Motorcycle. Harley-Davidson Motor Company. 509,282, May 3; Serial No. 531,586, published Jan. 11, 1949.
Generators, Internal combustion engine-driven electrical. Radio Corporation of America. 509,421, May 3; Serial No. 546,126, published Dec. 21, 1948.
Glass tubing pre-coated with fluoreacent chemicals. General Luminescent Corporation. 442,598, May 3; Serial No. 503,362, published Dec. 21, 1948.
Heat devices, Electrical. Electric Heat Devices, Inc. 509,474, May 3; Serial No. 515,165.
Heaters, Automatic electric water. R. H. Crane. 509,343, May 3; Serial No. 537,017, published Dec. 21, 1948.
Insulation, Electrical. General Electric Company. 255,500, renewed Apr. 23, 1949. O. G. May 3.
Insulators, Electric. Illinois Electric Porcelain Company. 509,294, May 3; Serial No. 532,934, published Dec. 21, 1948.
Irons, Electric. Proctor Electric Company. 509,293, May 3; Serial No. 532,874, published Dec. 28, 1948.
Lamps, bulbs, Fluoreacent, fluorescent lighting fixtures and parts therefor, etc. Electro Manufacturing Corporation. 509,498, May 3; Serial No. 535,692.
Lamps for electric outlets, Luminous plug. Littelfuse Incorporated. 509,459, May 3; Serial No. 489,520.
Lens, Fog. B. L. Latonsek. 442,638, May 3; Serial No. 525,607, published Jan. 11, 1949.
Lighting fixtures, Electric. Eastern Fixture Company. 509,304, May 3; Serial No. 534,423, published Jan. 11, 1949.

Lighting fixtures, Fluorescent. C. Barton. 509,232, May 3; Serial No. 520,922, published Dec. 21, 1948.
Machines and apparatus, Electrical. Electric Machinery Mfg. Company. 509,410, May 3; Serial No. 544,556, published Dec. 21, 1948.
Machines and apparatus, Electrical. Electric Machinery Mfg. Company. 509,411, May 3; Serial No. 544,557, published Dec. 21, 1948.
Motors, Electric. Barber-Colman Company. 509,292, May 3; Serial No. 532,796, published Dec. 21, 1948.
Motors, Electric. Dynamatic Corporation. 509,248, May 3; Serial No. 527,434, published Jan. 18, 1949.
Motors, Electric, electric welders and parts thereof. Rockwell Manufacturing Company. 509,399, May 3; Serial No. 542,659, published Jan. 4, 1949.
Piezoelectric crystal elements. The Brush Development Company. 509,506, May 3; Serial No. 540,378.
Piezoelectric crystals. The Brush Development Company. 509,247, May 3; Serial No. 537,410, published Dec. 28, 1948.
Racks, Relay, desk panels, cabinet racks, etc. Par-Metal Products Corp. 509,416, May 3; Serial No. 545,388, published Dec. 28, 1948.
Radio apparatus. Motorola, Inc. 509,238, May 3; Serial No. 523,407, published Jan. 11, 1949.
Radio interference filters. Sprague Products Company. 509,200, May 3; Serial No. 485,799, published Jan. 11, 1949.
Radio receivers. Avco Manufacturing Corporation. 509,258, May 3; Serial No. 528,883, published Dec. 21, 1948.
Radio receiving sets. W. M. Winans. 442,635, May 3; Serial No. 524,362, published Jan. 11, 1949.
Radio receiving sets, combination radio receiving sets and phonographs, radio chassis, etc. Midwest Radio Corporation. 509,313, May 3; Serial No. 535,063, published Jan. 18, 1949.
Rectifiers, Electric current. Benwood-Linze Company. 509,428, May 3; Serial No. 547,379, published Jan. 4, 1949.
Resistance devices, Variable. Globe-Union Inc. 509,420, May 3; Serial No. 545,980, published Dec. 28, 1948.
Resistors, Electrical. Sprague Products Company. 365,238, Feb. 28, 1939. Republished May 3.
Signs, Electrical advertising. Charles L. Dwinell Co. 509,516, May 3; Serial No. 545,971.
Sound equipment. Ehrington Mfg. Corp. 509,407–8, May 3; Serial No. 544,339–40, published Jan. 4, 1949.
Spark plugs, and parts therefor, Automotive and gas engine. Stitt Ignition Company. 509,224, May 3; Serial No. 518,170, published Dec. 21, 1948.
Stoves, Electric. Cory Corporation. 509,301, May 3; Serial No. 534,091, published Jan. 4, 1949.
Switchboards, Electrical, convection-type electrical air heaters, electric pumping-plant panel boards, etc. J. L. Mitchell. 257,781, renewed June 18, 1949. O. G. May 3.
Switches, Electric. Westinghouse Electric & Manufacturing Company. 256,236, renewed May 7, 1949. O. G. May 3.
Tools, Portable electric. The Black & Decker Manufacturing Company. 442,581, May 3; Serial No. 484,438, published Jan. 11, 1949.
Tubes, Electron. Radio Corporation of America. 509,402, May 3; Serial No. 543,522, published Jan. 4, 1949.
Tubes, Radio and electronic. Standard Arcturus Corporation. 509,385, May 3; Serial No. 541,217, published Jan. 11, 1949.
Turn-tables, Electric. The Alliance Manufacturing Company. 509,394, May 3; Serial No. 541,904, published Jan. 11, 1949.
Vacuum cleaners, Domestic. The Thompson Manufacturing Co. 509,346, May 3; Serial No. 537,372, published Dec. 21, 1948.
Wire and cable, Electrical. John A. Roebling's Sons Company. 509,423, May 3; Serial No. 546,610, published Dec. 21, 1948.
Wire and cable, Electrical. John A. Roebling's Sons Company. 509,424, May 3; Serial No. 546,612, published Dec. 21, 1948.
Wire and cable, Electrical. John A. Roebling's Sons Company. 509,425, May 3; Serial No. 546,615, published Dec. 21, 1948.

CLASS 22

Fishing lines, Fly casting. Norwich Line Company, Inc. 438,598, May 4, 1948. Republished May 3.
Gloves, Leather, leather, kid, lamb, and cape dress gloves, leather work gloves and baseball mitts. Des Moines Glove & Mfg. Company, Inc. 162,060, Dec. 5, 1922. Republished May 3.
Golf shafts. The Kroydon Company. 258,268, renewed July 2, 1949. O. G. May 3.
Rolling toy. C. Schindler. 136,015, Nov. 2, 1920. Republished May 3.
Toy animals, toy wagons, toy army tanks, etc. Binky Baby Products Company. 406,918, Sept. 5, 1944. Republished May 3.

CLASS 23

Augers, auger bits, machine bits, etc. The W. A. Ives Manufacturing Co. 73,964, re-renewed June 1, 1949. O. G. May 3.
Ax, ads, pick handles, etc. Hartwell Brothers. 176,657, Nov. 27, 1923. Republished May 3.
Ax, ads, pick, sledge, maul, hammer and hatchet handles, etc. Hartwell Brothers. 176,675–8, Nov. 27, 1923. Republished May 3.
Ax, ads, pick, sledge, maul, hammer and hatchet handles, etc. Hartwell Brothers. 179,647, Feb. 12, 1924. Republished May 3.
Ax, ads, pick, sledge, maul, hammer and hatchet handles, etc. Hartwell Brothers. 183,848, May 6, 1924. Republished May 3.
Ax, ads, pick, sledge, maul handles, etc. Hartwell Brothers. 176,653, Nov. 27, 1923. Republished May 3.
Ax, ads, pick, sledge, maul handles, etc. Hartwell Brothers. 176,655, Nov. 27, 1923. Republished May 3.
Ax, ads, pick, sledge, maul, etc. Hartwell Brothers. 176,663, Nov. 27, 1923. Republished May 3.
Axe heads. Hartwell Brothers. 240,278, Mar. 20, 1928. Republished May 3.
Band-strapping and box tying equipment. Harvey Machine Co., Inc. 442,579, May 3; Serial No. 479,126, published Jan. 11, 1949.
Bearings, Ball, and roller bearings. Aetna Ball & Roller Bearing Company. 509,322, May 3; Serial No. 535,670, published Jan. 11, 1949.
Bearings, bushings, tubular spacers. National Formetal Company, Inc. 509,461, May 3; Serial No. 495,683.
Blocking machine, Hat. Victory Hat Block Company. 509,261, May 3; Serial No. 529,116, published Jan. 4, 1949.
Centrifugal fans, propeller fans, blowers, etc. B. F. Sturtevant Company. 257,270, renewed June 4, 1949. O. G.
Centrifuges, Industrial. Merco Centrifugal Co. 509,271–2, May 3; Serial Nos. 530,540–1, published Jan. 11, 1949.
Chutes, Cattle, of the transportable variety. H. C. Whitworth. 442,620, May 3; Serial No. 517,530, published Jan. 4, 1949.
Clubs, Brakemen's, rammer rods, and handles for axes, hatchets, etc. Hartwell Brothers. 240,683, Apr. 3, 1928. Republished May 3.
Clutches, Friction. Dodge Manufacturing Corporation. 509,245, May 3; Serial No. 526,991, published Jan. 4, 1949.
Colloid mills, homogenizers, grinders, etc. Premier Mill Corporation. 442,584, May 3; Serial No. 486,810, published Jan. 4, 1949.
Control mechanism applied to a honing machine, Fluid actuated size. Micromatic Hone Corporation. 509,256, May 3; Serial No. 528,354, published Jan. 11, 1949.
Conveyors of all kinds, Underground mining, etc. La-Del Conveyor & Manufacturing Company. 437,419, Mar. 23, 1948. Republished May 3.
Device for crushing, screening, loading and handling rock and similar materials, etc. Universal Crusher Company. 394,436, Apr. 7, 1942. Republished May 3.
Egg beaters; mixer churns; beverage beaters; etc. United Royalties Corporation. 509,225, May 3; Serial No. 518,443, published Dec. 28, 1948.
Feeders, Can washer solution, and disinfectant sprayers. The Diversey Corporation. 509,284, May 3; Serial No. 531,779, published Dec. 28, 1948.
Grading machines, Potato. Lockwood Grader Corporation. 509,486, May 3; Serial No. 516,426.
Grinding machines, Vertical spindle, surface. The Blanchard Machine Company. 509,274, May 3; Serial No. 530,918, published Jan. 11, 1949.
Handles for cutlery, Plastic. Camillus Cutlery Company. 442,612, May 3; Serial No. 513,925, published Jan. 20, 1948.
Handles for tools. Hartwell Brothers. 309,040–1, Dec. 20, 1933. Republished May 3.
High voltage apparatus, Mobile electrical. The Apco Corporation. 442,625, May 3; Serial No. 520,248, published Dec. 28, 1948.
Hydraulic lift and adjustable platform, Combined. Rotary Lift Company. 509,203, May 3; Serial No. 494,125, published Jan. 11, 1949.
Hydraulic power units. Geo. D. Roper Corporation. 442,597, May 3; Serial No. 501,475, published Jan. 11, 1949.
Icing machines. Basic Foods Sales Corp. 438,478, Apr. 20, 1948. Republished May 3.
Kitchen implement. The Delsam Co. 509,532, May 3; Serial No. 550,077.
Lathes, Metal working. Lehmann Machine Company. 509,511, May 3; Serial No. 542,600.
Lubricant-dispensing apparatus, Stationary. Lincoln Engineering Company. 509,207–8, May 3; Serial Nos. 505,505–6, published Jan. 4, 1949.
Machine for feeding stationery through a business machine. Uarco Incorporated. 509,201, May 3; Serial No. 532,766, published Jan. 11, 1949.
Machines for soil preparation, pulverizing and packing, etc. Brillion Iron Works, Inc. 509,491, May 3; Serial No. 532,210.
Mufflers, Exhaust. Windsor-Lloyd Products, Inc. 509,310, May 3; Serial No. 534,705, published Jan. 11, 1949.
Nut tapping machines. Western Machine Tool Works. 509,230, May 3; Serial No. 520,845, published Dec. 28, 1948.
Pistons, piston pins, piston pin bushings, etc. National Automotive Parts Association. 351,349, Oct. 26, 1937. Republished May 3.

Power operated lift trucks, cargo loaders, roller conveyors, etc. Cargair, Inc. 442,583, May 3; Serial No. 485,192, published Jan. 11, 1949.
Pumps, Centrifugal. American-Marsh Pumps, Inc. 509,280, May 3; Serial No. 531,419, published Jan. 11, 1949.
Pumps, Hydraulic, hydraulic presses, hydraulic kiln car propellers, etc. The Denison Engineering Company 396,777, Aug. 4, 1942. Republished May 3.
Pumps, Reciprocating piston type water well. The Leriv Corporation. 509,276, May 3; Serial No. 530,943, published Jan. 11, 1949.
Razor blades. The Fair. 509,380, May 3; Serial No. 540,532, published Jan. 11, 1949.
Razors. Jean Jordeau, Inc. 248,051, Oct. 16, 1928. Republished May 3.
Razors and razor blades. Katz Drug Company. 328,150, Sept. 17, 1935. Republished May 3.
Shovels, scoops, and spades. Magor Car Corporation. 509,484, May 3; Serial No. 519,881.
Stamps, Special steel, embossing and marking dies, etc. Cadillac Stamp Company, Inc. 242,771, June 5, 1928. Republished May 3.
Textile machinery. McGlynn Hays Industries, Inc. 509,316, May 3; Serial No. 535,417, published Jan. 11, 1949.
Tire inflation and fire extinguishing unit. Power-Pak Products, Inc. 442,621, May 3; Serial No. 517,586, published Jan. 11, 1949.
Tools. American Grinder Manufacturing Co. 212,682, May 11, 1926. Republished May 3.
Tools and parts thereof. Ames Shovel and Tool Company. 258,346–7, renewed July 2, 1949. O. G. May 3.
Tools in the nature of tongs, Food handling and serving. The Dill Manufacturing Company. 509,287, May 3; Serial No. 532,388, published Jan. 11, 1949.
Trucks, Power operated industrial material handling. Clark Equipment Company. 509,255, May 3; Serial No. 528,261, published Jan. 4, 1949.
Wrenches and wrench parts. Efco Manufacturing, Inc. 442,626, May 3; Serial No. 520,689, published Dec. 28, 1948.
Wrenches, Pipe. Walworth Company. 509,206, May 3; Serial No. 505,020, published Nov. 30, 1048.

CLASS 24

Devices, Holding. C. A. May. 442,580, May 3; Serial No. 482,998, published Jan. 4, 1949.
Drying frames. Queen Manufacturing Co., Inc. 509,223, May 3; Serial No. 518,037, published Dec. 28, 1948.
Laundry appliances. Butts Manufacturing Co. 509,326, May 3; Serial No. 536,042, published Jan. 11, 1949.
Laundry machinery and equipment. Devere Company. 509,234, May 3; Serial No. 521,120, published Jan. 4, 1949.
Protector, Button, and/or like pad for use in laundering and dry cleaning and other machines. Manitowoc Cotton Goods Mfg. Co. 509,390, May 3; Serial No. 541,852, published July 23, 1948.
Washing machines, Laundry. The Barton Corporation. 374,109, Jan. 2, 1940. Republished May 3.

CLASS 26

Apparatus for determining the angular relation between the axes of vehicle wheels. A. A. Friestedt. 509,233, May 3; Serial No. 521,010, published Jan. 18, 1949.
Apparatus for the testing and training of vision. Keystone View Company. 442,622, May 3; Serial No. 517,853, published Dec. 28, 1948.
Callpers, Veruier, vernier height gauges, vernier depth gauges, etc. The George Worthington Company. 349,995, Aug. 31, 1937. Republished May 3.
Computing machines, Multiple-key-operated, also combined computing and typewriting machines. Underwood Corporation. 509,354, May 3; Serial No. 537,953, published Jan. 4, 1949.
Device adapted for manual setting and disposed at a point remote from an evaporative comer, etc. A. S. Feinberg. 442,604, May 3; Serial No. 509,083, published Dec. 28, 1948.
Dispensers, Coffee cream. K. Hughes. 509,414, May 3; Serial No. 544,866, published Jan. 11, 1949.
Gages, Drill, multi-use rule and gage, protractors, etc. General Hardware Mfg. Co. Inc. 509,227, May 3; Serial No. 519,015, published Jan. 11, 1949.
Gauges, Indicating. Rochester Manufacturing Co., Inc. 442,609, May 3; Serial No. 512,345, published July 27, 1948.
Indicators, Temperature, temperature recorders, thermostats, etc. Edwin L. Wiegand Company. 509,252, May 3; Serial No. 527,660, published Dec. 28, 1948.
Lenses, Contact. Noel O. Stimson. 509,467, May 3; Serial No. 509,252.
Measuring and dispensing apparatus. Bowser, Inc. 509,199, May 3; Serial No. 479,328, published Jan. 11, 1949.
Meter for measuring and indicating the flow of fluids. Selas Corporation of America. 509,242, May 3; Serial No. 526,649, published Dec. 14, 1948.
Meters, Granberg Equipment, Inc. 442,586, May 3; Serial No. 487,017, published Dec. 28, 1948.
Meters, Oscillating type. Rockwell Manufacturing Company. 509,219, May 3; Serial No. 514,432, published Jan. 11, 1949.
Microscope electric light source. Clay-Adams Company, Inc. 509,237, May 3; Serial No. 523,023, published Jan 11, 1949.
Optical goods. S. Cohen. 509,348, May 3; Serial No. 537,424, published Jan. 11, 1949.
Photographic developing papers. The Haloid Company. 509,254, May 3; Serial No. 528,207, published Dec. 28, 1948.
Projector, Still film strip. C. H. Dunning. 442,500, May 3; Serial No. 504,826, published Jan. 4, 1949.
Recording equipment, 16 mm. sound-on-motion picture film. Berndt-Bach, Incorporated. 509,314, May 3; Serial No. 535,122, published Jan. 11, 1949.
Rules, Measuring. The Stanley Works. 250,616, renewed Aug. 6, 1949. O. G. May 3.

Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 153,624, May 3.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 153,625, May 3.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 153,626, May 3.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 153,627, May 3.
Philippe, Alfred, Scaradale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 153,628, May 3.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 153,629, May 3.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 153,630, May 3.
Pullman-Standard Car Manufacturing Company, assignee: *See*—
Haman, Ralph W.
Murphy, Frank L., and Haman.
Reilly, Alfred F., North Attleboro, Mass., assignor to Evans Case Co. Table lighter. 153,631, May 3.
Reilly, Alfred F., North Attleboro, Mass., assignor to Evans Case Co. Table lighter. 153,632, May 3.
Reilly, Alfred F., North Attleboro, Mass., assignor to Evans Case Co. Table lighter. 153,633, May 3.
Reilly, Alfred F., North Attleboro, Mass., assignor to Evans Case Co. Table lighter. 153,634, May 3.
Reilly, Alfred F., North Attleboro, Mass., assignor to Evans Case Co. Table lighter. 153,635, May 3.
Reinecke, Jean O., Oak Park, Ill., assignor to Lactona Incorporated, St. Paul, Minn. Display container. 153,636, May 3.
Reiss, Ernest H., Floral Park, N. Y. Combination desk unit. 153,637, May 3.
Remde, Edward H., assignor to The Baker-Raulang Company, Cleveland, Ohio. Power driven tractor. 153,638, May 3.
Remsen Lamp Manufacturing Co., assignee: *See*—
Gotliffe, Irving I.
Rupley, Frederick L., Cincinnati, Ohio, assignor to Merz Engineering Company, Indianapolis, Ind. Portable pneumatic gauge. 153,630, May 3.
Ryan, Johnnie, Co., The, assignee: *See*—
D'Addario, Thomas.
Sandee Manufacturing Company, assignee: *See*—
Szantay, Elmer.
Scherts, Adolph, Youngstown, Ohio. Ash tray. 153,640, May 3.
Shure, Samuel J., assignee: *See*—
Wende, Adolph H.
Sidore, May, Manchester, N. H., assignor to Pandora Knitwear, Inc., New York, N. Y. Knitted fabric. 153,641, May 3.
Silverman, Richard J., Brooklyn, N. Y. Christmas tree ornament. 153,642, May 3.
Snodgrass, John A., Prescott, Ark. Fountain pen. 153,643, May 3.
Stanley, James, Jr.: *See*—
Stanley, James R., and Stanley J., Jr.
Stanley, James, Sr., and J. Stanley, Jr., New York, N. Y. Clothespin. 153,644, May 3.
Stickless Corporation, assignee: *See*—
Frankl, Ernest.
Stiles, Harry L., assignor to Chicago Electric Manufacturing Company, Chicago, Ill. Electric fruit juicer. 153,645, May 3.
Stone, Leland G., assignor to The Magnavox Company, Fort Wayne, Ind. Radio phonograph cabinet. 153,646, May 3.
Szantay, Elmer, Chicago, Ill., assignor to Sandee Manufacturing Company. Crib toy or the like. 153,647, May 3.
Taylor, Samuel H., Jr., Merchantville, assignor to Park-In Theatres Company, Camden, N. J. Screen building for an outdoor theatre. 153,648, May 3.
Trifari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.
Trigére, Robert, New York, N. Y. Dress. 153,649, May 3.
Ulvad, Bernard, assignor, by mesne assignments, to Foster Grant Co., Inc., Leominster, Mass. Candlestick or the like. 153,650, May 3.
United States Rubber Company, assignee: *See*—
Arbib, Richard H.
Waltz, Ralph D., Sellersville, Pa., assignor to American Machine and Metals, Inc., New York, N. Y. Combined pressure gauge and relief valve or similar article. 153,651, May 3.
Watkins, Joseph R., Dover, N. J., assignor to Foster Grant Co., Inc., Leominster, Mass. Sunglass frame. 153,652, May 3.
Weinberg, Sol, New York, N. Y. Textile fabric. 153,653, May 3.
Wende, Adolph H., St. Louis, Mo., assignor to H. Kleinkauf, Omaha, Nebr., E. Haas and H. Gould, Kansas City, Mo., A. Natkin, Houston, Tex., B. M. Natkin, Clayton, S. J. Shure, St. Louis, doing business as Natkin & Company, Brentwood, Mo. Utility wagon. 153,654, May 3.
Wilson, Lawrence H., Detroit, assignor to Motor Wheel Corporation, Lansing, Mich. Cabinet for a heater or the like. 153,655, May 3.
Winter, Frank, Lincolnwood, assignor to Autopoint Company, Chicago, Ill. Pencil clip or similar article. 153,656, May 3.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 3D DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrahamse, Henry L., and J. E. Hewitt, assignors to Abrams Instrument Corporation, Lansing, Mich. Automatic timer. 2,468,855, May 3.
Abrams Instrument Corporation, assignee: *See*—
Abrahamse, Henry L., and Hewitt.
Accurate Tool and Engineering Company, assignee: *See*—
Sherman, Wilbur G.
Achey, Norwood, Rossville, Ga. Sectional boiler. 2,469,253, May 3.
Adamson, Arthur P., Ballston Spa, N. Y., assignor to General Electric Company. Angular motion transmitting apparatus. 2,469,100, May 3.
Adelson, David E., and H. F. Gray, Jr., Berkeley, assignors to Shell Development Company, San Francisco, Calif. Acetal resins. 2,469,286, May 3.
Adietta, Joseph G., New York, N. Y. Slide rule accessory. 2,469,221, May 3.
Agriculture, United States of America as represented by the Secretary of, assignee: *See*—
Beckel, Arthur C., and Belter.
Ventre, Emil K.
Aiken, William R., Berkeley, Calif. Communication system. 2,468,911, May 3.
Air Preheater Corporation, The, assignee: *See*—
Karlason, Per H., and Cooper.
Air Reduction Company, Incorporated, assignee: *See*—
Begerow, Walter.
Hughey, Howard G.
Aktiengesellschaft Fuer Technische Studien, assignee: *See*—
Villiger, Eugen.
Albertson, Noel F., East Greenbush, S. Archer, and C. M. Suter, Albany, assignors, by mesne assignments, to Winthrop-Stearns, Inc., New York, N. Y. Alkyl esters of α-acyl, α-acylamino, β(3-indole)-propionic acid. 2,468,912, May 3.
Albrecht, Jacob W., Queens Village, assignor to Dictograph Products Company, Inc., New York, N. Y. Fire alarm switch. 2,469,024, May 3.
Aldham, Thomas E., East Providence, R. I., assignor to Fram Corporation. Filter cartridge package. 2,469,025, May 3.
Alexander, John A., Berkeley, Calif. Combined table and desk for children. 2,468,856, May 3.
Alexander, Robert O., assignor to Thiokol Corporation, Trenton, N. J. Polysulfide polymer and making. 2,469,141, May 3.
Allen, Archie A., assignor to Kirsch Company, Sturgis, Mich. Curtain or drapery fixture. 2,469,098, May 3.
Allen, Frank C., Jr., assignee: *See*—
Barr, George.
Allied Chemical & Dye Corporation, assignee: *See*—
Calfee, John D., and Florio.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Sealey, William C.
Alimänna Svenska Elektriska Aktiebolaget, assignee: *See*—
Persson, Gunnar J.
Aluminum Company of America, assignee: *See*—
McArthur, Bruce E., Bohn, and Wagner.
Thompson, Jason F.
American Blower Corporation, assignee: *See*—
Rosebrough, John D.
American Can Company, assignee: *See*—
Peters, John F.
American Cyanamid Company, assignee: *See*—
Mackay, Johnstone S.
Payne, Nellie M. C.
American Seating Company, assignee: *See*—
Nordmark, Walter E.
Windhorst, Pearl R.
American Steel Foundries, assignee: *See*—
Kline, Edmund P., and Kayler.
American Steel and Wire Company, The, assignee: *See*—
Widerberg, Oscar A., and Wallsten.
American Steel and Wire Company of New Jersey, The, assignee: *See*—
Barnes, Raleigh H., and Elmendorf.
Boak, Willis E.
Brickman, Alan E.
Little, Jess C.
American Viscose Corporation, assignee: *See*—
Davidson, Hobart O.
Kennedy, Edgar S., and Wedler.
Nash, Thomas L.
Amperex Electronic Corp., assignee: *See*—
Seeanke, Alexander.
Anderson, John A., Chicago, and V. Voorhees, Homewood, assignors to Standard Oil Company, Chicago, Ill. Making spheroidal gel particles. 2,468,857, May 3.

Andersson, Sven W. E., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Air conditioning. 2,469,142, May 3.
Andrew Corporation, assignee: *See*—
Cox, Claude R.
Andrews Company, assignee: *See*—
Andrews, Isaac.
Andrews, Isaac, assignor to Andrews Company, Spartanburg, S. C. Weaving reed. 2,468,800, May 3.
Andrus, Orrin E., Altadena, Calif., assignor to A. O. Smith Corporation, Milwaukee, Wis. Electric windings and leads therefor. 2,469,099, May 3.
Andrus, Orrin E., Altadena, Calif., assignor to A. O. Smith Corporation, Milwaukee, Wis. Laminated magnetic core. 2,469,100, May 3.
Archer, Sydney: *See*—
Albertson, Noel F., Archer, and Suter.
Arend, Fritz W.: *See*—
Sealey, William C., and Arend.
Armco Steel Corporation, assignee: *See*—
Hudson, Edwin B.
Armour and Company, assignee: *See*—
Hoerr, Charles W.
Armstrong, Eldon L., Jackson Heights, and W. A. Beman, Douglaston, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated. Oxidation of sulfuric acid heavy alkylate. 2,469,322, May 3.
Ascherl, Michael, Lorain, Ohio. Apparel-hanger cabinet. 2,469,143, May 3.
Aspey, Wayne S.: *See*—
Wallace, James M., Rawlins, Cumming, and Aspey.
Atlantic Refining Company, The, assignee: *See*—
Griesinger, William K.
Attorney General of the United States, assignee: *See*—
Laurent, Pierre A.
Rohn, Wilhelm.
Atwood, John B., and B. Trevor, Riverhead, N. Y., assignors to Radio Corporation of America. Crystal rectifier converter. 2,469,222, May 3.
Auster Limited, assignee: *See*—
Small, Walter W.
Auto Diesel Piston Ring Company, assignee: *See*—
Heinrich, August H.
Avery, Harold T., Oakland, Calif. Airplane and helicopter sustained aircraft. 2,468,913, May 3.
Axe, William N.: *See*—
Wagner, Cary R., and Axe.
Baggott, Edmund W., Brooklyn, assignor to Ideal Novelty & Toy Co., Hollis, N. Y. Toy airplane. 2,469,144, May 3.
Bahnson, Agnew H., Jr., Winston-Salem, N. C. Outlet for humidifying ducts. 2,468,858, May 3.
Bailey Meter Company, assignee: *See*—
Barnes, Frederick A.
Bailiff, Doyle D., East Gary, Ind. Jump measuring device. 2,469,145, May 3.
Banaszak, John J. and W. J., Battle Creek, Mich. Foldable vehicle. 2,468,914, May 3.
Banaszak, Walter J.: *See*—
Banaszak, John J. and W. J.
Bankson, Severin B., San Francisco, Calif. Ear trumpet, including adjustable sections. 2,469,254, May 3.
Barnes, Frederick A., Cleveland Heights, Ohio, assignor to Bailey Meter Company. Pattern controlled grinding wheel dressing mechanism. 2,469,255, May 3.
Barnes, Miriam M., executrix: *See*—
Barnes, Raleigh H., and Elmendorf.
Barnes, Raleigh H., deceased, Cleveland Heights, by M. M. Barnes, executrix, Cleveland Heights, Ohio, and H. J. Elmendorf, Worcester, Mass., assignors to The American Steel and Wire Company of New Jersey. Steel helmet. 2,469,146, May 3.
Barr, George, New York, assignor to F. C. Allen, Jr., Pelham Manor, N. Y. Musical instrument. 2,468,726, May 3.
Barrows, Donald S., Rochester, N. Y., assignor to The Symington-Gould Corporation. Railway truck. 2,469,323, May 3.
Barstad, Sverre A., Stavanger, Norway. Arrangement for salting and hooking of fish (herring). 2,469,026, May 3.
Barter, Bert H., Coral Gables, Fla., assignor to Great Southern Box Company, Inc., New Orleans, La.. Folded box. 2,468,951, May 3.
Barto, Ward, Denver, Colo. Ball target. 2,469,061, May 3.
Bauman, Joseph J., Chicago, Ill., assignor to Kurz-Kasch, Inc., Dayton, Ohio. Sectional radio cabinet. 2,468,727, May 3.
Bayless, George W., assignor to T. Kotzin, Los Angeles, Calif. Patch pocket and making same. 2,468,915, May 3.
Beall, Charles T., Casper, Wyo. Power operated chair. 2,468,801, May 3.

Beard, Joseph G., Haddonfield, and L. W. Born, Collingswood, N. J., assignors to Radio Corporation of America. Frequency modulation. 2,469,200, May 3.
Beard, Joseph G., Haddonfield, N. J., and R. F. Dressler, Philadelphia, Pa., assignors to Radio Corporation of America. Circuit tuner. 2,469,324, May 3.
Beber, Adolph J., Copley, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Preparation of dithiuryl disulfide. 2,468,952, May 3.
Beckel, Arthur C., Peoria, and P. A. Belter, Pekin, Ill., assignors to The United States of America as represented by the Secretary of Agriculture. Recovery of oil and by-products from alcoholic solutions of oleaginous materials. 2,469,147, May 3.
Bedworth, Arthur H., Pomona, Calif, and L. G. Curtis, Winchester, Mass. Bottle capping die. 2,469,191, May 3.
Beebe, Austin H., Jr.: *See*—
Mason, James F., and Beebe.
Begerow, Walter, Wood-Ridge, N. J., assignor to Air Reduction Company, Incorporated. Tracing device. 2,468,802, May 3.
Begtrup, Edward F., Elizabeth, N. J. Apparatus for full fusion welding of rails. 2,469,062, May 3.
Beisser, Harry, Oakland, Calif. Key cutting machine. 2,469,027, May 3.
Beialeff, James F., assignor to two-thirds to Cyril Herence Delaney and Gallay, Limited, London, England. Plate type heat exchanger. 2,469,028, May 3.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Felch, Edwin P., Jr., and Slonczewski.
Peek, Robert L., Jr.
Potter, James A.
Scott, Walter F.
Truckness, David E.
Belter, Paul A.: *See*—
Beckel, Arthur C., and Belter.
Beman, Warren A.: *See*—
Armstrong, Eldon L., and Beman.
Bendix Aviation Corporation, assignee: *See*—
Winkler, Albert H.
Benner, Robert: *See*—
Warnock, Orin B., and Benner.
Bennett, Irving J. Venger, and G. C. Waddell, Beaver Falls, Pa. Plural target eye-testing device. 2,468,953, May 3.
Berger, Emil J., and H. K. West, assignors to The Dexdale Hosiery Mills, Lansdale, Pa. Racking mechanism for knitting machines. 2,468,728, May 3.
Berthies, Charles W., Paris, France. Protecting device for the commutator and brushes of dynamo machines. 2,469,029, May 3.
Beynon, Nathan T., Dayton, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del. Wrinkle flexible material with rubber solution coating. 2,468,724, May 3.
Bide, Austin E., H. J. Nicholls, and P. A. Wilkinson, London, assignors to Glaxo Laboratories Limited, Greenford, England. Preparation of derivatives of cholesterol. 2,468,859, May 3.
Bivens, George H., Johnstown, Pa. Ingot mold cleaner. 2,469,148, May 3.
Black, Eric A., Red Bank, N. J. Anchorage. 2,468,729, May 3.
Blackwelder, Horace L., Salisbury, N. C. Space heater. 2,469,149, May 3.
Blaine, Robert P.: *See*—
Held, Fred J., Jr., and Blaine.
Blake, Edward S., Nitro, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo. Preserving rubber. 2,469,101, May 3.
Bliss, William H., Natchitoches, La. Pan-tilt tripod head. 2,469,063, May 3.
Block, Richard J., Scarsdale, and H. W. Howard, Irvington, assignors to The Borden Company, New York, N. Y. Purifying casein. 2,468,730, May 3.
Blossom Products Corporation, assignee: *See*—
Smicker, Emma A.
Boak, Willis E., Burton, Ohio, assignor to The American Steel and Wire Company of New Jersey. Wire coating compositions. 2,469,150, May 3.
Boehme, Werner R.: *See*—
Huber, Wolfgang, and Boehme.
Bohn, Donald I.: *See*—
McArthur, Bruce E., Bohn, and Wagner.
Bonham, Louis E., Birmingham, Ala. Valve for multicell innertubes. 2,468,954, May 3.
Bonnet, André, Vaulx-en-Velin, and P. Coatet, La Voulte-sur-Rhone, France, assignors to Comptoir des Textiles Artificiels. Purifying sodium sulfate. 2,468,803, May 3.
Booge, James E., and H. C. Gulledge, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Method for producing organic titanium compounds. 2,468,916, May 3.
Boone, Paul D., assignee: *See*—
Turk, Amos.
Booth, James H., Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio. Control system. 2,468,917, May 3.
Borden Company, The, assignee: *See*—
Block, Richard J., and Howard.
Borkland, Gustave W., Marion, Ind. Production of ornamented embossed articles. 2,468,731, May 3.
Born, Leo W.: *See*—
Beard, Joseph G., and Born.
Bouc, Charles A., Chicago, Ill. Tree holder. 2,469,192, May 3.
Boulicault, Marcel, St. Louis, Mo. Teeth cleaning unit. 2,468,732, May 3.
Boulicault, Marcel, St. Louis, Mo. Teeth cleaning unit. 2,468,733, May 3.
Bowers, Carl E., Los Angeles, Calif. Toy riding spur. 2,468,918, May 3.
Brakman, Abram L., Rochester, N. Y. Dusting brush for vacuum cleaners. 2,469,256, May 3.
Branson, Otis L., Beaumont, Tex., assignor to Socony-Vacuum Oil Company, Incorporated. Conversion of hydrocarbons. 2,469,325, May 3.
Brant, David O., Beverly Hills, Calif. Variable delivery rotary pump. 2,468,734, May 3.
Breisch, Edgar W., Edgewood, and J. L. Seits, Wilkinsburg, assignors to The Union Switch and Signal Company, Swissvale, Pa. Train carried transmitting loop for train communication systems. 2,469,102, May 3.
Bremer, Richard, Muskegon, Mich. Automobile door repair bench. 2,469,151, May 3.
Brets, Everett M. and M. V., De Ridder, La. Mower sharpener. 2,468,860, May 3.
Brets, Mary V.: *See*—
Brets, Everett M. and Mary V.
Breymeier, Rudolph T., Niagara Falls, N. Y., assignor to The Linde Air Products Company. Fluid-cooled gas blanketed arc-welding torch. 2,468,804, May 3.
Brickman, Alan E., Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey. Fitting for wire structures. 2,469,257, May 3.
Bridge, Walter, Birkenhead, and J. Matchet, Liverpool, England, assignors to Imperial Chemical Industries, Limited. Production of chloral alcoholate. 2,468,861, May 3.
Briggs, Southwick W., Washington, D. C. Fluid filtering element. 2,468,862, May 3.
Bristol Company, The, assignee: *See*—
Russell, John L.
Brock, Harold L., Detroit, and C. F. Kramer, Birmingham, assignors to Ford Motor Company, Dearborn, Mich. Tractor radiator grille. 2,468,809, May 3.
Brockley, Jacob, Newport. News, Va. Sharpener. 2,469,258, May 3.
Brotman, Hyman D., Detroit, Mich. Washing machine drive. 2,468,919, May 3.
Brown, Arthur R., Old Bridge, and R. T. Hucks, South Itiver, N. J., and C. W. Johnson, Flint, Mich., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Hammered metal finish compositions. 2,468,920, May 3.
Brown, Holwin T., assignor to Troutman Shirt Company, Troutman, N. C. Pocket structure. 2,468,955, May 3.
Brown, Howard P., Meridian, Miss. Trailer dolly. 2,469,152, May 3.
Brown, William A., Bronx, N. Y., assignor, by mesne assignments, to Hartford-Empire Company, Hartford, Conn. Paste-applying mechanism. 2,469,030, May 3.
Brubaker, Jacob Z., Manheim, Pa. Thermostat controlled means for maintaining dual temperature in motors. 2,468,735, May 3.
Bruce, Stanford P., assignor to Wheel Trueing Tool Company, Detroit, Mich. Grinding wheel dressing mechanism. 2,468,921, May 3.
Bruegger, Ernest, Massillon, Ohio, assignor to The Gris-com-Russell Company, New York, N. Y. Apparatus for use in making precoiled helical fins. 2,469,223, May 3.
Brush Development Company, The, assignee: *See*—
Kjellgren, Bengt R. F.
Bryant, Harold W.: *See*—
Cornthwaite, William R., and Bryant.
Budd Company, The, assignee: *See*—
Watter, Michael.
Buffalo Pottery Incorporated, assignee: *See*—
Gould, Robert E.
Bulkley, William L., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Absorption refrigerating system. 2,469,153, May 3.
Bunnell, Raymond H., and D. B. Hatcher, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Preparation of organo-silicon compositions containing rapidly polymerizable olefinic double bonds. 2,469,154, May 3.
Burchett, Ray L., East Orange, assignor to Ronson Art Metal Works, Inc., Newark, N. J. Pyrophoric lighter. 2,468,810, May 3.
Burg, Martin S., Chicago, Ill., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Core oils. 2,468,956, May 3.
Burgess, William E., New Orleans, La. Air conditioner. 2,469,259, May 3.
Burks, George E., Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif. Resilient mounting for tractor track idlers. 2,468,957, May 3.
Burns, Francis A., Townsend, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Shoe and bottom member. 2,468,863, May 3.
Bush Manufacturing Company, The, assignee: *See*—
La Pointe, Raymond E.
Bussey, William H., assignor to M-K Enterprises, Inc., Chicago, Ill. Variable phase shifter. 2,469,155, May 3.

Butler, Benjamin J., West Roxbury, assignor to Raytheon Manufacturing Company, Newton, Mass. Slotted cathode structure. 2,468,736, May 3.
Caesar, Philip D., Wenonah, and A. N. Sachanen, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Interpolymerization of thiophene and butadiene. 2,469,326, May 3.
Caine, William P., Birmingham, Ala. Compressor unloader. 2,469,224, May 3.
Calfee, John D., Manhasset, and P. A. Florio, Brooklyn, N. Y., assignors to Allied Chemical & Dye Corporation. Making tetrachlorodifluoroethane. 2,469,290, May 3.
California Research Corporation, assignee: *See*—
Dimpfl, Ludwig H., and Elwell.
Meier, Richard L., and Elwell.
Campbell, Edmund M., assignor to Mine Safety Appliances Company, Pittsburgh, Pa. Adhesive compress. 2,469,064, May 3.
Campbell, Warren M.: *See*—
Campobasso, John J., and Campbell.
Campbell, Warren M., Winthrop, Mass. Sewage treatment and oil and water separation. 2,468,864, May 3.
Campobasso, John J., Arlington, and W. M. Campbell, Winthrop, Mass. Sewage treatment. 2,468,865, May 3.
Candler, Arthur V. B., assignor to Maloney-Crawford Tank & Manufacturing Co., Tulsa, Okla. Apparatus for treating crude oil vapors. 2,468,958, May 3.
Canfora, Arthur E., Brooklyn, N. Y., assignor to Radio Corporation of America. Electronic counter circuit. 2,469,031, May 3.
Cannon, Frank, Rhinecliff, N. Y. Key case. 2,468,950, May 3.
Carborundum Company, The, assignee: *See*—
Williamson, John A.
Cargill, Louis H., Jenkintown, assignor to Specialty Packaging Company, Prospect Park, Pa. Packaging. 2,469,156, May 3.
Carlson, Lyle A., Oakville, Conn. Yarn bobbin. 2,469,103, May 3.
Carnegie-Illinois Steel Corporation, assignee: *See*—
Greulich, Gerald G.
Markle, Glenn R.
Carrier Corporation, assignee: *See*—
Shepherd, Daniel F.
Carroll, William E., Rockville, Md. Surcingle. 2,468,811, May 3.
Case, John S., Baltimore, Md. Valve device. 2,468,960, May 3.
Cataldo, John B.: *See*—
O'Brien, Joseph F., and Cataldo.
Caterpillar Tractor Co., assignee: *See*—
Burks, George E.
Celanese Corporation of America, assignee: *See*—
Whitehead, William.
Woodman, Thomas C.
Cellulplastic Corporation, assignee: *See*—
Rodman, Isaac P., Jr.
Centre d'Etudes M. B. A. (Mecanique, Ballstique Armement), assignee: *See*—
Gourdon, Robert.
Chalk, Bennett, Far Rockaway, N. Y. Truss. 2,469,260, May 3.
Chaudron, Percy O., Cedartown, Ga. Individual tea and coffee service. 2,469,032, May 3.
Cherney, Michael, North Tarrytown, assignor of one-half to J. B. Danis, New City, N. Y. Digit indicator for slide rules. 2,468,812, May 3.
Chrysler Corporation, assignee: *See*—
Herreshoff, Alexander G., and Lamb.
Ross, Walter G.
Chung, Paul K.: *See*—
Hartough, Howard D., and Chung.
Ciba Pharmaceutical Products, Inc., assignee: *See*—
Miescher, Karl, and Rometsch.
Cisneros, Consuelo G., Hollywood, Calif. Tatting shuttle. 2,469,291, May 3.
Clossen, Andrew J.: *See*—
Yeager, Milburn E., and Clossen.
Coca-Cola Company, The, assignee: *See*—
Copping, Bruce G.
Cohn, Edwin J., Cambridge, Mass., assignor to Research Corporation, New York, N. Y. Protein fractionation. 2,469,193, May 3.
Coleman Company, Inc., The, assignee: *See*—
Pullis, Boyd W.
Collier, William S., Danville, Ill. Oil filter and cooler. 2,468,866, May 3.
Collins, Elvin B., Calvert, Tex. Internal expanding pipe wrench. 2,468,867, May 3.
Comptoir Des Textiles Artificiels, assignee: *See*—
Bonnett, Andre, and Coatet.
Rey, Augustin.
Conrad, Keith, and J. W. Hackett, Toledo, Ohio. Electric motor. 2,469,104, May 3.
Continental Foods, Inc., assignee: *See*—
Galvin, Stephen L.
Cook, Thomas L., San Francisco, Calif. Machine for applying labels to containers. 2,468,922, May 3.
Cooper, Benjamin, New York, N. Y., and A. F. Hohmann, Teaneck, N. J.; said Hohmann assignor to said Cooper. Electric iron having a supporting mechanism. 2,468,813, May 3.
Cooper, Fred B., Moose Jaw, Saskatchewan, Canada. Teeth cleaning assembly. 2,469,261, May 3.
Cooper, Roland S.: *See*—
Karlsson, Per Hilmer, and Cooper.
Copping, Bruce G., Fulton County, Ga., assignor to The Coca-Cola Company, Wilmington, Del. Beverage dispensing device. 2,469,327, May 3.
Cordier, David E., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Thermosetting urea-formaldehyde composition. 2,469,157, May 3.
Corliss, Lester M.: *See*—
Stareck, Jesse E., and Corliss.
Cornell-Dubilier Electric Corporation, assignee: *See*—
Hings, Donald L.
Mas, José A.
Corning Glass Works, assignee: *See*—
Dundt, William H.
Cornthwaite, William R., Wilmington, Del., and H. W. Bryant, Niagara Falls, N. Y.; assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Vinyl acetate polymerization process. 2,468,923, May 3.
Cornwell, Catherine B., Belmont, Calif. Drinking tube holder. 2,469,292, May 3.
Cox, George R., Detroit, Mich., assignor to Eureka Williams Corporation. Seal. 2,469,065, May 3.
Coatet, Pierre: *See*—
Bonnet, Andre, and Coatet.
Courtier, Edward W., assignor to Swenson Evaporator Company, Harvey, Ill. Seal. 2,468,924, May 3.
Costant, André C., and J. Mathot, Paris, France. Exposure lens finder for cameras having adjustable sighting position. 2,468,814, May 3.
Cox, Claude R., assignor to Andrew Corporation, Chicago, Ill. Dry-air pump. 2,469,328, May 3.
Crampton Manufacturing Company, assignee: *See*—
Pleasant, Herman E.
Crawford, Chester C.: *See*—
Legatski, Harold R., and Crawford.
Cressaty, George M., assignee: *See*—
Rosin, Seymour, and Cressaty.
Crompton & Knowles Loom Works, assignee: *See*—
Turner, Richard G.
Crouch, Willie W.: *See*—
Schulze, Walter A., and Crouch.
Crowley, John A., Jr., Scarsdale, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated. Apparatus for conducting reactions in the presence of a solid material. 2,469,329, May 3.
Cumming, James M.: *See*—
Wallace, James M., Rawlins, Cumming, and Aspey.
Curphy, William C., Montour, Iowa. Exhaust pipe attachment. 2,468,961, May 3.
Curtis, Lewis G.: *See*—
Bedworth, Arthur H., and Curtis.
Cutler-Hammer, Inc., assignee: *See*—
Mekelburg, Harold L.
Czak, Edwin E., Elyria, Ohio. Auxiliary table top. 2,468,962, May 3.
Danis, Joseph B., assignee: *See*—
Cherney, Michael.
Danzin, André, and E. Despois, Paris, France, assignors to Societe Francaise Radio-Electrique. Glass of very rapid fusion and high point of transformation. 2,468,868, May 3.
Daudt, William H., assignor to Corning Glass Works, Corning, N. Y. Organosilicon compositions and making them. 2,468,869, May 3.
Davidson, Hobart O., Swarthmore, Pa., assignor to American Viscose Corporation, Wilmington, Del. Filtration. 2,469,293, May 3.
Davidson, John H., United States Navy, South Haven, assignor to The Dow Chemical Company, Midland, Mich. Preventing arsenical injury to plants. 2,469,330, May 3.
Davis, Harold B.: *See*—
Kelley, Eugene B., and Davis.
Davis, Thomas McL., Washington, D. C. Electrical connecting fixture. 2,468,737, May 3.
Dawson, John W., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Induction motor control system. 2,469,294, May 3.
Day, James R., Peconic, N. Y., assignor to Radio Corporation of America. Pulse multiplex receiver. 2,469,066, May 3.
De Angelis, John A.: *See*—
Murdock, Frederick D., and De Angelis.
Dear, Alexander T. C., Hill Top, West Bromwich, assignor to Lewin Road Sweepers Limited, West Bromwich, England. Refuse collector. 2,469,033, May 3.
De Boer, Herman O., Lombard, Ill. Floor roller construction. 2,468,925, May 3.
DeFrees, Joseph H., assignor to Pennsylvania Furnace and Iron Company, Warren, Pa. Spring loading means. 2,469,158, May 3.
De Olers, Clarence A., Forest Hills, assignor to The Liquidometer Corporation, Long Island City, N. Y. Weatherproof transmitter resistor device. 2,469,106, May 3.
De Jur-Amsco Corporation, assignee: *See*—
Moomaw, Lewis H.
Delaney, Cyril T., and Gallay, Limited, assignee: *See*—
Beialeff, James F.
Delvaux, Jean L., Paris, France, assignor to General Electric Company. Reactance tube circuit. 2,469,194, May 3.

Dempsey, Oscar E., assignor to Dempsey Pump Co., Tulsa, Okla. Flowing wells. 2,469,225, May 3.
Dempsey Pump Co., assignee: *See*—
Dempsey, Oscar E.
Despois, Edouard: *See*—
Danain, Andre, and Despois.
Dexdale Hosiery Mills, The, assignee: *See*—
Berger, Emil J., and West.
Dickerman, Fred N., Nichols, assignor to United Aircraft Corporation, East Hartford, Conn. Landing gear for aircrafts. 2,469,106, May 3.
Dictograph Products Company, Inc., assignee: *See*—
Albrecht, Jacob W.
Dilg, Walter C.: *See*—
Munro, George R., and Dilg.
Dimpfl, Ludwig H., and W. E. Elwell, Berkeley, assignors to California Research Corporation, San Francisco, Calif. Chlorinated wax-polystyrene composition. 2,469,107, May 3.
Disio Corporation, assignee: *See*—
Trainor, Foster J.
Dixon, Joseph, Crucible Company, assignee: *See*—
Miller, Kay.
Dombrowiak, Joseph R., Portland, Oreg. Passenger escape for vehicles. 2,469,159, May 3.
Dormeyer Corporation, assignee: *See*—
Kennedy, Verne C.
Douglass, Myrl R., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Light signal. 2,468,815, May 3.
Dow Chemical Company, The, assignee: *See*—
Davidson, John H.
Griess, Gerald A., and Teot.
Morris, Earl D., and Griess.
Young, Arthur E., and Hoogsteen.
Young, Arthur E., and Stilbert.
Doyle, Vaughn H., assignee: *See*—
Peterson, Karl O.
Drake, Francis M., Woodbridge, N. J., assignor to The Linde Air Products Company. Gas blanketed arc welding. 2,468,808, May 3.
Dressler, Robert F.: *See*—
Beard, Joseph G., and Dressler.
Dubeau, Archie L.: *See*—
Vincent, George P., and Dubeau.
Duce, Ralph E., Kokomo, Ind., assignor to Haynes Stellite Company. Making composite welded articles. 2,468,816, May 3.
Duchin, Viva, New York, N. Y. Pocket container for postage stamps. 2,468,817, May 3.
Dudley, Leslie P. C. J., Twickenham, assignor to Stereoptics Limited, London, England. Making stereoscopic X-ray photographs. 2,468,963, May 3.
Dunham, Edward W.: *See*—
Wiegert, Wallace A., and Dunham.
Dunn, Albert, and O. C. Elland, Mount Rainier, Md. Hydraulic transmission. 2,468,964, May 3.
Du Pont, E. I., de Nemours & Company, assignee: *See*—
Booge, James E., and Gulledge.
Brown, Arthur R., Hucks, and Johnson.
Cornthwaite, William R., and Bryant.
Gresham, William F., and Gribbins.
Miller, Charles F.
Dorfee, Walter W., and J. P. Foley, Lorain, Ohio, assignors to National Tube Company. Blowing in blast furnaces. 2,468,738, May 3.
Eagle Signal Corporation, assignee: *See*—
Pearson, Frank A.
Eastman Kodak Company, assignee: *See*—
Hegemeyer, Hugh J., Jr.
Eaton, John L., Trenton, and J. B. Fenn, Riverview, Mich., assignors to Sharples Chemicals Inc., Philadelphia, Pa. Condensation of olefinic compounds with hydrogen sulfide. 2,468,739, May 3.
Eckles, Howard W.: *See*—
Lindberg, Caryl A., and Eckles.
Eggers, Alfred G., assignor to Horix Manufacturing Company, Pittsburgh, Pa. Lathe with variable speed carriage feed. 2,469,262, May 3.
Elland, Odus C.: *See*—
Dunn, Albert, and Elland.
Eitel-McCullough, Inc., assignee: *See*—
Eitel, William W., and McCullough.
Eitel, William W., Woodside, and J. A. McCullough, Millbrae, assignors to Eitel-McCullough Inc., San Bruno, Calif. Electron tube. 2,469,331, May 3.
Ekstrom, Earl A., Saugus, assignor to Fort Hill Engraving Company, Boston, Mass. Electrically heated gilding tool. 2,468,965, May 3.
Electric & Musical Industries Limited, assignee: *See*—
Pearce, Albert F.
Electric Storage Battery Company, The, assignee: *See*—
Murphy, Harold P.
Electrolux Corporation, assignee: *See*—
Wahlberg, Eric C.
Elmendorf, Harold J.: *See*—
Barnes, Raleigh H., and Elmendorf.
Else, Walter J., Everett, Wash. Smoke actuated fire alarm. 2,468,740, May 3.
Elwell, William E.: *See*—
Dimpfl, Ludwig H., and Elwell.
Meier, Richard L., and Elwell.
Emerson Electric Manufacturing Company, The, assignee: *See*—
Lindberg, Caryl A., and Eckles.
Emerson, John H., Cambridge, Mass. Breathing apparatus. 2,468,741, May 3.
Emsio Braid Corporation, assignee: *See*—
Loader, Hector.
Enterprise Railway Equipment Company, assignee: *See*—
Zimmer, Albert E.
Eshbaugh, Jesse E., Flint, assignor to General Motors Corporation, Detroit, Mich. Coolant relief valve. 2,469,195, May 3.
Eskow, Seymour, Taunton, Mass. Manufacture of rug braids. 2,468,870, May 3.
Eureka Williams Corporation, assignee: *See*—
Coes, George E.
Evans, Leigh R., assignor to Hardinge Brothers, Inc., Elmira, N. Y. Work stop for use with collets. 2,469,160, May 3.
Evans, Louis P., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Conversion of hydrocarbons. 2,469,832, May 3.
Excel Movie Products, Inc., assignee: *See*—
Lloyd, Whitten P.
Fairchild Engine and Airplane Corporation, assignee: *See*—
Hammer, Charles E.
Farmer, Earl W., Deephaven, Minn. Toy gear. 2,468,966, May 3.
Farrell, Frederick L.: *See*—
Farrell, Sydney T., and Farrell.
Farrell, Sydney T., and F. L. Farrell, Belmont, Mass. Belt driving mechanism. 2,469,296, May 3.
Farrell, Sydney T., and F. L. Farrell, Belmont, Mass. Pulley. 2,469,297, May 3.
Farrell, Sydney T., and F. L. Farrell, Belmont, Mass. Machine gun mount. 2,469,333, May 3.
Faulhaber, Roland W., Monroeville, Ohio, assignor, by meane assignments, to C. W. Norton, Jr., Chicago, Ill. Baby bather. 2,468,742, May 3.
Feich, Edwin P., Jr., Chatham, N. J., and T. Slonczewski, Glenwood Landing, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Magnetic field strength indicator. 2,468,968, May 3.
Fenn, John B.: *See*—
Eaton, John L., and Fenn.
Fischer, Henry J., Warren Township, Macomb County, Mich. Galloping hobbyhorse. 2,469,263, May 3.
Fisher, George R. L. S., Pendock, Staunton, England. Permutation lock. 2,468,967, May 3.
Fitch, Herbert F., Norwalk, Conn. Auxiliary feeder for hat formers. 2,469,161, May 3.
Florio, Patrick A.: *See*—
Caltee, John D., and Florio.
Florsheim Shoe Company, The, assignee: *See*—
Pick, Oswald M., and Goodman.
Foley, John P.: *See*—
Durfee, Walter W., and Foley.
Follin, Cornelius M., La Mesa, Calif. Ice cube tray. 2,469,067, May 3.
Food Machinery and Chemical Corporation, assignee: *See*—
Low, Frank S.
Wilbur, Paul C.
Ford Motor Company, assignee: *See*—
Brock, Harold L., and Kramer.
Rivard, Lawrence B., and McCarthy.
Rowland, George D., and Morris.
Ford, Shelley W., assignor of one-half to J. F. Gagel, Dayton, Ohio. Automobile body construction. 2,469,068, May 3.
Forni, George P., Emeryville, Calif. Rotary drier. 2,468,871, May 3.
Forse, Harry D., Anderson, Ind. Collar clamping apparatus. 2,469,226, May 3.
Fort Hill Engraving Company, assignee: *See*—
Ekstrom, Earl A.
Fort Howard Paper Company, assignee: *See*—
Sobota, John.
Fox, Leonard, Buffalo, and R. Remick, New York, N. Y. Electrically heated dental spatula. 2,468,818, May 3.
Fram Corporation, assignee: *See*—
Aldham, Thomas E.
Fraser, Robert M., Baldwin, N. Y., assignor to Radio Corporation of America. Electronic wave generating method and means. 2,469,227, May 3.
Fries, Karl W., assignor to Rhinelander Paper Company, Rhinelander, Wis. Wax-polyamide-pinene resin coating composition. 2,469,108, May 3.
Frost, George E., Schenectady, N. Y. Protective system. 2,468,743, May 3.
Fry, Benjamin W., Ladue, assignor to National Vendors, Inc., St. Louis, Mo. Article dispensing apparatus. 2,468,819, May 3.
Furnas Electric Company, assignee: *See*—
Koertge, Nobel H.
Gagel, J. Frederic, assignee: *See*—
Ford, Shelley W.
Galey, James O., Nashville, Tenn. Magnetic doorstop. 2,468,969, May 3.
Galvin, Stephen L., North Bergen, assignor to Continental Foods, Inc., Hoboken, N. J. Packaged food composition. 2,468,744, May 3.

Garand, John C., Springfield, Mass. Broaching cutter. 2,468,745, May 3.
Garrett, Emil, Quantico, Va. Flash hider for machine guns. 2,468,926, May 3.
Garris, Marian A., Seattle, Wash. Combined condiment container. 2,469,034, May 3.
Garvait, Henry, assignor, by means assignments, to Van Horne Kaestner Leather Co., Milwaukee, Wis. Manufacturing shoe counters. 2,468,927, May 3.
Gehman, John B., Haddonfield, and A. H. Turner, Collingswood, N. J., assignors to Radio Corporation of America. Radio-frequency distribution transformer. 2,469,162, May 3.
General Electric Company, assignee: *See*—
Adamson, Arthur P.
Delvaux, Jean L.
Palme, Arthur, and McCarty.
Powers, James H.
Rich, Theodore A.
Scheldorf, Marvel W.
Shea, Richard F.
Shuler, Sanford A., Jr.
Smith, Sidney B., Jr.
Sway, Henry C.
Thomas, Henry P.
General Engineering and Dry Dock Corporation, assignee: *See*—
Tydeman, Clarence W.
General Motors Corporation, assignee: *See*—
Eshbaugh, Jesse E.
Roedding, Gordon E.
Rossman, Edwin F.
Schwartzwalder, Karl, and Schaefer.
Smith, Rolf M.
Spunt, Leo, and Gould.
General Tire & Rubber Company, The, assignee: *See*—
Thiry, Leon F.
Genesee Research Corporation, assignee: *See*—
White, Chester M.
Gertler, Samuel I., Washington, D. C., dedicated to the free use of the People in the Territory of the United States. Insect repellent. 2,469,228, May 3.
Gilbert & Barker Manufacturing Company, assignee: *See*—
Logan, Joseph A.
Gilbertson, Clarence R., Spokane, Wash. Gear or wheel puller. 2,468,970, May 3.
Gilmore, Chace D., West Chester, Pa. Candleholder. 2,469,163, May 3.
Gilmore, Edward M., Jr., assignor to Imagineering Corporation, Chicago, Ill. Rack structure. 2,469,298, May 3.
Glaxo Laboratories Limited, assignee: *See*—
Bide, Austin E., Nicholls, and Wilkinson.
Goddard, Ester C., executrix: *See*—
Goddard, Robert H.
Goddard, Robert H., deceased, late of Annapolis, Md., by E. C. Goddard, executrix, Worcester, Mass., assignor of one-half to The Daniel and Florence Guggheim Foundation, New York, N. Y. Cooling projected devices. 2,468,820, May 3.
Goecke, Rudolph F., Elyria, Ohio, assignor to The Pfaudler Co., Rochester, N. Y. Noncorrodible valve. 2,469,109, May 3.
Goldberg, Edwin A., Princeton, N. J., assignor to Radio Corporation of America. Generation and modulation of alternating current signals. 2,469,264, May 3.
Goldberg, Harry, assignor by mesne assignments, to Pioneer Gen-E-Motor Corporation, Chicago, Ill. Magneto magnet. 2,469,196, May 3.
Goldsberry, Albert W., Northbrook, and H. S. Martin, Glenview, assignors to The Pure Oil Company, Chicago, Ill. Distilling head. 2,468,872, May 3.
Goodman, Bennett E.: *See*—
Pick, Oswald M., and Goodman.
Goodrich, B. F., Company, The, assignee: *See*—
Beber, Adolph J.
Heid, Fred J., Jr., and Blaine.
Hollis, Arthur L.
Jansen, Jacob E.
Krots, Alvin S.
Sundet, Sherman A.
Goodstein, Charles B., Newton Highlands, Mass. Brad. 2,468,821, May 3.
Gould, Bruce A.: *See*—
Spunt, Leo, and Gould.
Gould, Robert E., Hamburg, assignor to Buffalo Pottery Incorporated, Buffalo, N. Y. Apparatus for preparing bungs of ceramic ware for firing. 2,469,229, May 3.
Gourdon, Robert, assignor to Centre d'Etudes M. B. A. (Mecanique, Balistique, Armement), Paris, France. Electromechanical device for governing predetermined changes of positions. 2,469,035, May 3.
Gray, Harold F., Jr.: *See*—
Adelson, David E., and Gray, Jr.
Grazier, Don C., Dixon, Mont. Trolley suspended playground device. 2,469,069, May 3.
Great Southern Box Company, Inc., assignee: *See*—
Barter, Bert H.
Greensfelder, Bernard S., Oakland, and R. J. Moore, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Production of improved Diesel engine fuels by the catalytic isomerization of high boiling paraffins. 2,468,746, May 3.
Greer, Edward M.: *See*—
Mercier, Jean, and Greer.
Greer Hydraulics, Inc., assignee: *See*—
Mercier, Jean, and Greer.
Gregg, Lester M., Newport, Wash. Post driver. 2,468,971, May 3.
Gresham, William F., and M. F. Gribbins, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of long-chain esters of beta-thiodipropionic acid. 2,468,725, May 3.
Greulich, Gerald G., Mount Lebanon, Pa., assignor to Carnegie-Illinois Steel Corporation. Open floor grating and making same. 2,469,070, May 3.
Gribbins, Myers F.: *See*—
Gresham, William F., and Gribbins.
Griesinger, William K., Drexel Hill, assignor to the Atlantic Refining Company, Philadelphia, Pa. Production of hydrocarbon resins. 2,468,822, May 3.
Griess, Gerald A.: *See*—
Morris, Earl D., and Griess.
Griess, Gerald A., and A. S. Teot, assignors to The Dow Chemical Company, Midland, Mich. Interpolymers of drying oils, mono-alkenyl-aromatic hydrocarbons, and divinyl-benzene. 2,468,747, May 3.
Griess, Gerald A., and A. S. Teot, assignors to The Dow Chemical Company, Midland, Mich. Drying oil-styrene interpolymers. 2,468,748, May 3.
Griscom-Russell Company, The, assignee: *See*—
Bruegger, Ernest.
Groh, Bernard C., Orange, N. J., assignor to The United States of America as represented by the Secretary of War. Telephone switchboard system. 2,468,749, May 3.
Grotelite Company, Inc., The, assignee: *See*—
Richardson, Henry M.
Gudenrath, George L., assignor to Hudson Engineering Corporation, Houston, Tex. Separating hydrocarbons. 2,468,750, May 3.
Guggenheim, Daniel and Florence, Foundation, The, assignee: *See*—
Goddard, Robert H.
Gulf Research & Development Company, assignee: *See*—
Rocchini, Albert G.
Gulledge, Hugh C.: *See*—
Booge, James E., and Gulledge.
Gump, Richard A., assignee: *See*—
James, Frazier N.
Hackett, James W.: *See*—
Conrad, Keith, and Hackett.
Hagerty, Robert J., San Gabriel, Calif. Moisture measuring and calibrating apparatus for tree culture. 2,468,972, May 3.
Hambrock, Ida, Toledo, Ohio. Multisectioned folder. 2,468,973, May 3.
Hammer, Charles E., Hagerstown, Md., assignor to Fairchild Engine and Airplane Corporation. Rotary switch. 2,468,974, May 3.
Hansen, William W., Garden City, and R. H. Varian, Bellmore, N. Y., assignors to The Sperry Corporation. Object detecting and locating system. 2,468,751, May 3.
Hansen, William W., and S. F. Varian, Garden City, and R. H. Varian, Wantagh, N. Y., assignors to The Board of Trustees of the Leland Stanford Junior University, Stanford University, Calif. Electronic oscillator-detector. 2,468,028, May 3.
Harding, Hiram R., Baltimore, assignor of fifty per cent to H. E. Karr, Baltimore County, Md., and twenty-five per cent to L. C. Harding, Hopewell, Va. Locked couplings. 2,469,111, May 3.
Harding, Logan C., assignee: *See*—
Harding, Hiram R.
Hardinge Brothers, Inc., assignee: *See*—
Evans, Leigh R.
Harper, Elmer E., deceased, Monrovia, Calif.; E. P. Harper, executrix. Automatic apparatus for feeding liquid or gaseous materials. 2,469,230, May 3.
Harper, Esther P., executrix: *See*—
Harper, Elmer E.
Hart, John M., Fort Worth, Tex. Sheet metal shears. 2,469,036, May 3.
Hartford-Empire Company, assignee: *See*—
Brown, William A.
Hartford National Bank and Trust Company, assignee: *See*—
Oosterkamp, Wilbe J., and Vingerhoets.
Hartough, Howard D.: *See*—
Kosak, Alvin I., and Hartough.
Hartough, Howard D., Pitman, and P. K. Chung, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Haloalkylation of aromatic hydrocarbons. 2,469,334, May 3.
Harvey, James W., Lakeville, Conn. Fisherman's barrel knot tier. 2,469,037, May 3.
Harvey, Sidney M., Detroit, Mich. Welding electrode holder switch. 2,468,873, May 3.
Hatcher, David B.: *See*—
Hunnell, Raymond H., and Hatcher.
Hatfield, John E., Leitchworth, England, assignor, by mesne assignments to Irving Air Chute Co. Inc., Buffalo, N. Y. Cutting and/or marking apparatus. 2,469,299, May 3.
Hathaway, Claude M., Denver, Colo. Oscillograph. 2,469,265, May 3.

Hawkes, Lawrence H., Cannelton, W. Va. Mine trap door. 2,469,164, May 3.

Hawkins, Karl G. E., Park Ridge, Ill. Torsion driven tool. 2,468,874, May 3.

Haynes Stellite Company, assignee: *See*—
Duce, Ralph E.

Haseltine Research, Inc., assignee: *See*—
Loughlin, Bernard D.
Okrent, Jasper J.

Hegemeyer, Hugh J., Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Preparing β-lactones. 2,469,110, May 3.

Heinrich, August H., Euclid, assignor to Auto Diesel Piston Ring Company, Cleveland, Ohio. Piston rod packing. 2,468,752, May 3.

Held, Fred J., Jr., and R. P. Blaine, Cleveland, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Plastic composition comprising vinyl resin and dicarbouate ester. 2,468,975, May 3.

Heller, Herman S., assignee: *See*—
Ross, Donsid E., and Stofer.

Helwig, Wilbur R., Baltimore, Md. Circle cutting blow-pipe machine. 2,469,112, May 3.

Henderson, Lloyd F., Reading, and L. H. Libby, Boston, assignors to Lever Brothers Company, Cambridge, Mass. Bleaching oils and fats. 2,468,753, May 3.

Henrikson, Karl E., Indianapolis, Ind. Radial clearance gauge. 2,468,875, May 3.

Herbst, Harry T., Roselle, N. J., assignor to The Linde Air Products Company. Fluid cooled gas blanketed arc-welding torch. 2,468,805, May 3.

Herbst, Harry T., Roselle, N. J., assignor to The Linde Air Products Company. Water-cooled gas blanketed arc-welding torch. 2,468,807, May 3.

Hermann, Clarence C., Grosse Pointe Park, Mich., assignor to C. B. Schnaible. Separating apparatus. 2,469,197, May 3.

Hermanson, William A., Boston, Mass. Sanitary pad. 2,468,876, May 3.

Herrenhoff, Alexander G., Orosne Pointe, and W. Lamb, Detroit, assignors to Chrysler Corporation, Highland Park, Mich. Inverted V-type engine. 2,468,976, May 3.

Hewitt, John E.: *See*—
Abrahamiae, Henry L., and Hewitt.

Heyneman, William J., Portsmouth, Va. Tire. 2,469,300, May 3.

Hillier, James, Cranbury, N. J., assignor to Radio Corporation of America. Correction device for electron lenses. 2,469,165, May 3.

Hings, Donald L., Ottawa, Ontario, Canada, assignor, by mesne assignments, to Cornell-Dubilier Electric Corporation, South Plainfield, N. J. Discharge wave generator. 2,468,754, May 3.

Hobbs, George L., Glendale, Calif. Pedal extension and footrest attachment for pianos. 2,468,977, May 3.

Hoerr, Charles W., assignor to Armour and Company, Chicago, Ill. Fatty acid amine ealt composition. 2,468,755, May 3.

Hohmann, Albert F.: *See*—
Cooper, Benjamin, and Hohmann.

Holley, Earl, assignee: *See*—
Orr, A. William, Jr.

Holley, George M., assignee: *See*—
Orr, A. William, Jr.

Hollis, Arthur L., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Composition of matter comprising carbon black and alkyl thiazyl disulfides. 2,468,978, May 3.

Holst, Knute A., Astoria, Long Island, assignor to Pitometer Log Corporation, New York, N. Y. Shaft seal. 2,469,114, May 3.

Holt, William E. and W. R., Oakland, Calif. Drive unit for floor treating machines. 2,468,929, May 3.

Holt, William R.: *See*—
Holt, William E. and W. R.

Hoogsteen, Harold M.: *See*—
Young, Arthur E., and Hoogsteen.

Hooker, Howard W., assignor to Philco Corporation, Philadelphia, Pa. Latch mechaniam. 2,469,113, May 3.

Hopping, Charles O., Long Beach, Calif. Puncture sealing Composition. 2,469,039, May 3.

Horix Manufacturing Company, assignee: *See*—
Eggers, Alfred G.

Horton, William P., Newburyport, Mass. Fish bait. 2,468,877, May 3.

Houdaille-Hershey Corporation, assignee: *See*—
McLauchlan, John.

Housepian, Edgar M., New York, N. Y. Clamp. 2,468,823, May 3.

Howard, Charles W., Long Beach, Calif. Wheel type target member. 2,468,979, May 3.

Howard, Hartley W.: *See*—
Block, Richard J., and Howard.

Howell, Hugh A., Valparaiso, Ind., assignor to The Indiana Steel Products Company, Chicago, Ill. Magnetic transducer having an irregular nonmagnetic gap. 2,469,266, May 3.

Huber, Matthew W., Watertown, N. Y., assignor to The New York Air Brake Company. Piston sealing structure. 2,468,980, May 3.

Huber, Wolfgang, Kings County, N. Y., and W. R. Boehme, Prince Georges County, Md., assignors to Winthrop-Stearns Inc., New York, N. Y. Thiamine 2-ethylhexyl sulfate. 2,468,930, May 3.

Hucks, Robert T.: *See*—
Brown, Arthur R., Hucks, and Johnson.

Hudson, Edwin B., Middletown, Ohio, assignor to Armco Steel Corporation. Car wheel construction for resisting the transmission of vibrations. 2,468,931, May 3.

Hudson Engineering Corporation, assignee: *See*—
Gudenrath, George L.

Huffman, James O., Los Angeles, Calif. Troweling machine. 2,468,981, May 3.

Huge, Henry M., assignor, by mesne assignments, to Lorain Products Corporation, Lorain, Ohio. Frequency reducer. 2,468,878, May 3.

Hughey, Howard G., Fanwood, N. J., assignor to Air Reduction Company, Incorporated. Multipiece cutting tip. 2,468,824, May 3.

Hutt, Stanley, Washington, D. C., and R. H. Symonds, Arlington, Va. Vanity case and atomiser. 2,469,267, May 3.

Hvam, Hjalmar, Portland, Oreg. Ski binding. 2,468,879, May 3.

Ideal Novelty & Toy Co., assignee: *See*—
Baggott, Edmund W.

Illinois Tool Works, assignee: *See*—
Poupitch, Ouglesa J.

Imagineering Corporation, assignee: *See*—
Gilmore, Edward M., Jr.

Imperial Chemical Industries Limited, assignee: *See*—
Bridge, Walter, and Matchet.
Johnson, Alan W.

Indiana Steel Products Company, The, assignee: *See*—
Howell, Hugh A.

Interchemical Corporation, assignee: *See*—
Reitz, Charles A., and Lecture.

International Staple and Machine Company, assignee: *See*—
Schafroth, Werner.

Irving Air Chute Co., Inc., assignee: *See*—
Hatfield, John E.

Iverson, John O., assignor to Universal Oil Products Company, Chicago, Ill. Hydrogen fluoride recovery process. 2,468,736, May 3.

Jack & Heinz Precision Industries, Inc., assignee: *See*—
Scott, Lloyd H.

Jaffa, Mose, Brooklyn, N. Y., assignor to Optimue Equipment Company, Matawan, N. J. Degreasing device. 2,469,040, May 3.

Jagersberger, Adolf, St. Gilgen, Austria. Pyrometer lamp for optical temperature measurements. 2,469,115, May 3.

James, Frasier N., Dallas, Tex., assignor, by mesne assignments, of thirty-three and one-third per cent to The Master Corporation, thirty-three and one-third per cent to F. N. James, and thirty-three and one-third per cent to R. A. Gump. Refrigerating cabinet having an air-pump circuit. 2,468,932, May 3.

Jamieson, William G.: *See*—
Walker, Ronald W., and Jamieson.

Jansen, Jacob E., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Preparation of bisphenols. 2,468,982, May 3.

Jernstedt, George W., Belleville, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Plating. 2,468,825, May 3.

Jerome, Chester W., Detroit, Mich. Bowling ball insert. 2,469,268, May 3.

Johnson, Allan W., Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. Manufacture of 3-tetrahydrofuranone. 2,468,881, May 3.

Johnson, Charles E., North Muskegon, assignor to Johnson Products, Inc., Muskegon Heights, Mich. Tappet holding wrench. 2,468,983, May 3.

Johnson, Charles W.: *See*—
Brown, Arthur R., Hucks, and Johnson.

Johnson, George C., Woodbury, and B. W. Rope, Mullica Hill, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Catalytic alkylation. 2,469,335, May 3.

Johnson, Nellie S., and A. F. Sargent, Detroit, Mich.; said Sargent assignor to said Johnson. Warp tensioning device. 2,468,880, May 3.

Johnson Products, Inc., assignee: *See*—
Johnson, Charles E.

Johnson, Robert, Verona, assignor to Koppers Company, Inc., Pittsburgh, Pa. Chemical process. 2,468,759, May 3.

Johnson, William B., United States Army, Easley, S. C. Closure cap turning means. 2,468,757, May 3.

Johnson, William B., United States Army, Easley, S. C. Retaining means for closure caps. 2,468,758, May 3.

Johnson, William T.: *See*—
Kreig, Kenneth L., and Johnson.

Johnston, Frank L., Portland, Oreg. Golf practice device. 2,469,301, May 3.

Jones, Ellsworth J., Willoughby, Ohio. Convertible velocipede. 2,468,933, May 3.

Jones, Norman L., Brighton, Victoria, Australia, assignor, by mesne assignments, to Standard-Vacuum Oil Company. Preparing aluminum soaps and certain classes of useful compositions containing aluminum soaps. 2,469,041, May 3.

Jorgensen, Bernhardt, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Lasting machine. 2,468,882, May 3.

Kalamazoo Stove & Furnace Co., assignee: *See*—
Lang, Robert C.

Karlsson, Per H., Wellsville, N. Y., and R. S. Cooper, River Forest, Ill., assignors to The Air Preheater Corporation, New York, N. Y. Moisture control to heat recovery apparatus. 2,468,826, May 3.

Karr, Harry E., assignee: *See*—
Harding, Hiram R.

Kayler, Frank H.: *See*—
Kinne, Edmund P., and Kayler.

Kelleher, Lynden M., San Francisco, Calif. Transitory garment. 2,469,302, May 3.

Kelley, Eugene B., Little Rock, and H. B. Davis, North Little Rock, Ark. Dolly for railway cars, vehicles, and other objects. 2,469,042, May 3.

Kelsey-Hayes Wheel Company, assignee: *See*—
Sinclair, Charles W.

Kempthorn, David C., Akron, assignor to The Sun Rubber Company, Barberton, Ohio. Apparatus for producing hollow rubber articles. 2,468,760, May 23.

Kennedy, Benjamin H., Pittsford, N. Y. Utility stand. 2,469,232, May 3.

Kennedy, Edgar S., Wayne, and E. C. Wedler, Media, Pa., assignors to American Viscose Corporation, Wilmington, Del. Electrostatic control of fibres. 2,468,827, May 3.

Kennedy, Verne C., Evanston, assignor to Dormeyer Corporation, Chicago, Ill. Centrifugal governor for motors. 2,469,043, May 3.

Kiekhaefer, Elmer C., Cedarburg, Wis. Propeller mounting. 2,469,116, May 3.

Kiekhaefer, Elmer C., Cedarburg, Wis. Fuel supply for opposed cylinder engines. 2,469,117, May 3.

Killingsworth, Robert B., Douglaston, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated. Insect repellent comprising benzyl ethers of ethylene glycol. 2,469,303, May 3.

Kinne, Edmund P., and F. H. Kayler, Alliance, Ohio, assignors to American Steel Foundries, Chicago, Ill. Centering means for railway draft devices. 2,469,118, May 3.

Kirsch Company, assignee: *See*—
Allen, Archie A.

Kjeligren, Bengt R. F., University Heights, assignor to The Brush Development Company, Cleveland, Ohio. Growing p-type seed crystals. 2,468,761, May 3.

Klemperer, Hans, Belmont, assignor to Raytheon Manufacturing Company, Newton, Mass. Electrical precipitator. 2,469,231, May 3.

Kleyn, Teunis P., Muskegon, Mich. Pneumatic cleaning device. 2,468,934, May 3.

Knapp-Monarch Company, assignee: *See*—
Snyder, Leland H.

Koertge, Nobel H., Glen Ellyn, assignor to Furnas Electric Company, Batavia, Ill. Toggle actuated switch. 2,469,119, May 3.

Kohl, Everard F., Lakewood, Ohio. Control apparatus for switches and the like. 2,469,337, May 3.

Kohl, Everard F., Lakewood, Ohio. Switch or like apparatus. 2,469,336, May 3.

Kopp, Herman A., Bronx, N. Y. Hydraulic drive for motor vehicles. 2,468,828, May 3.

Koppers Company, Inc., assignee: *See*—
Johnson, Robert.

Kosak, Alvin I., Columbus, Ohio, and H. D. Hartough, Pitman, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Acylation of aromatic alkoxy compounds. 2,468,762, May 3.

Kotsin, Tobias, assignee: *See*—
Bayless, George W.

Kosachuk, Eustace, Toronto, Ontario, Canada. Automatic tack dispenser. 2,469,233, May 3.

Kramer, Clarence F.: *See*—
Brock, Harold L., and Kramer.

Krasinski, Leo C., assignee: *See*—
Stoye, Kurt.

Krieg, Kenneth L., and W. T. Johnson, Valley Center, Kans., said Johnson assignor to said Krieg. Machine for sandblast cleaning of tubular goods. 2,468,984, May 3.

Kropp Forge Company, assignee: *See*—
Kropp, Roy A.

Kropp, Roy A., River Forest, assignor to Kropp Forge Company, Cicero, Ill. Brake lever operated switch. 2,469,120, May 3.

Krotz, Alvin S., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Resilient connection and making same. 2,468,985, May 3.

Kura-Kasch, Inc., assignee: *See*—
Bauman, Joseph J.

Kydd, James, Ozone Park, assignor to Metropolitan Device Corporation, Brooklyn, N. Y. Ladder construction. 2,469,071, May 3.

Laher Spring & Tire Corp., assignee: *See*—
Nordquist, Harry E.

Lamb, Wade: *See*—
Herreshoff, Alexander G., and Lamb.

Landry, Amaury J., San Francisco, Calif. Bicycle stand. 2,468,763, May 3.

Lane, Henry G., Bainbridge, Ga. Adjustable plow sweep. 2,469,044, May 3.

Lang, Robert C., assignor to Kalamazoo Stove & Furnace Co., Kalamazoo, Mich. Range draft control. 2,469,121, May 3.

Langdon, Samuel W., assignor to Marful Specialties, Incorporated, Rochester, N. Y. Photographic apparatus for reproduction by direct or reflected light beams. 2,468,935, May 3.

La Pointe, Raymond E., assignor to The Bush Manufacturing Company, Hartford, Conn. Air chuck. 2,469,198, May 3.

La Pointe, Roland A., Bangor, Maine. Airplane wing. 2,468,883, May 3.

La Porta, Philip, Brooklyn, N. Y. Alarm and protector. 2,468,829, May 3.

Latham, Allen, Jr., Jamaica Plain, assignor to A. D. Little, Inc., Cambridge, Mass. Vapor compression type still. 2,469,122, May 3.

Lanrent, Pierre A., Paris, France; vested in the Attorney General of the United States. Dehydrating amyl alcohols. 2,468,764, May 3.

La Vietes, Joseph R., Brooklyn, N. Y. Bubble composition. 2,469,045, May 3.

Laws, Orpha M., administratrix and assignee: *See*—
Laws, Robert E.

Laws, Robert E.; O. M. Laws, administratrix of said R. E. Laws, deceased, assignor to said O. M. Laws, Kanab, Utah. Bitless bridle. 2,469,046, May 3.

Lear, Incorporated, assignee; *See*—
Lear, William P.

Lear, William P., Piqua, Ohio, assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich. Unitary mechanical actuator device. 2,469,200, May 3.

Lecture, Raymond F.: *See*—
Reitz, Charles A., and Lecture.

Legatski, Harold H., and C. C. Crawford, Bartlesville, Okla., assignors to Phillips Petroleum Company. Preparation of odorless fractions of highly branched paraffins. 2,468,986, May 3.

Leland Stanford Junior University, Board of Trustees, of The, assignee: *See*—
Hansen, William W., Varian, and R. H. Varian.

Le Moyne, Guy P., Fort Myers, Fla. Device for compounding mixed drinks. 2,468,987, May 3.

Lerman, Joseph, Brooklyn, N. Y. Corner wall lamp. 2,469,072, May 3.

L'Esperance, Louis, and H. A. Schneider, Madison, Wis. Propeller dolly. 2,468,884, May 3.

Lever Brothers Company, assignee: *See*—
Henderson, Lloyd F., and Libby.
Zicis, Norbert W., and Schmidt.

Lewin Road Sweepers Limited, assignee: *See*—
Dear, Alexander T. C.

Lewis, George F., Streator, Ill. Lifting apparatus. 2,469,199, May 3.

Libbey-Owens-Ford Glass Company, assignee: *See*—
Bunnell, Raymond H., and Hatcher.
Cordier, David E.

Libby, Louis H.: *See*—
Henderson, Lloyd F., and Libby.

Li Castri, Harry, New York, N. Y. Binding means for loose leaves. 2,469,166, May 3.

Liebel, Robert A., Allentown, Pa. Apparatus for setting finishing compositions. 2,469,270, May 3.

Lima-Hamilton Corporation, assignee: *See*—
Richardson, Henry M.

Lindberg, Caryl A., Glendale, and H. W. Eckles, assignors to The Emerson Electric Manufacturing Company, St. Louis, Mo. Fan type heater. 2,469,234, May 3.

Lindie Air Products Company, The, assignee: *See*—
Breymeier, Rudolph T.
Herbst, Harry T.
Pilla, Frank J.

Lindenthaler, Charles J., Chappaqua, assignor to Minute Skid Chain Corporation, Long Island City, N. Y. Traction device. 2,469,235, May 3.

Liquidometer Corporation, The, assignee: *See*—
De Giers, Clarence A.

Little, Arthur D., Inc., assignee: *See*—
Latham, Allen, Jr.

Little, Jess C., Cleveland, Ohio, assignor to The American Steel and Wire Company of New Jersey. Vibration damper. 2,469,167, May 3.

Lloyd, Whitten P., assignor to Excel Movie Products, Inc., Chicago, Ill. Film reel construction. 2,468,767, May 3.

Loader, Hector, New Bedford, Mass., assignor to Emsio Braid Corporation. Braiding machine. 2,469,047, May 3.

Lobdell, Garrett B., North Tonawanda, N. Y. Fish lure. 2,468,988, May 3.

Logan, Joseph A., Hadley, assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass. Oil burner. 2,469,271, May 3.

Logan, Joseph A., Hadley, assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass. Pressure atomizing oil burner. 2,469,272, May 3.

Long, Sidney L., Minneapolis, Minn. Miniature bowling apparatus. 2,469,236, May 3.

Loralee Products Corporation, assignee: *See*—
Huge, Henry M.

Lorenz, Anton, Buffalo, N. Y. Adjustable bed frame. 2,468,765, May 3.

Loughlin, Bernard D., Lynbrook, N. Y., assignor to Haseltine Research, Inc., Chicago, Ill. Loop-antenna tuning system. 2,469,168, May 3.

Low, Frank S., Bronxville, assignor to Food Machinery and Chemical Corporation, New York, N. Y. Recovery of chlorine from hydrogen chloride. 2,468,766, May 3.

Luaces, Enrique L., Dayton, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del. Uncooked wrinkle composition containing synthetic rubber and conjugated double bonded oil. 2,468,989, May 3.

Lubbock, John, London, England. Pipe joint. 2,468,885, May 3.
Lukeman, Richard J., Montreal, Quebec, Canada. Spark plug. 2,469,304, May 3.
Lundstrom, Carl B., Little Falls, N. Y. Guiding and supporting structure for drawers. 2,468,990, May 3.
Lundvall, John S., Park Ridge, assignor to Union Asbestos & Rubber Co., Chicago, Ill. Latch mechanism for car doors. 2,468,936, May 3.
Lutey, William J., Seattle, Wash. Shoe sole. 2,468,886, May 3.
M-K Enterprises, Inc., assignee: *See*—
Werner, George R.
Bussey, William H.
Mackay, Johnstone S., Old Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y. Preparation of guanidine phosphates. 2,469,338, May 3.
Magnavox Company, The, assignee: *See*—
Olson, Ray G.
Malick, Emil A., United States Navy. Means to indicate the presence of vapor in fluid conduit systems. 2,468,768, May 3.
Maloney-Crawford Tank & Manufacturing Co., assignee: *See*—
Candler, Arthur V. B.
Malouf, Edward F., San Jose, Calif. Metatarsal and outer longitudinal arch support. 2,468,887, May 3.
Maltese, Joseph S., Hempstead, N. Y., assignor to Rensbed-Mason Company, Detroit, Mich. Device for proportioning liquid mixtures. 2,469,305, May 3.
Maniola, James J., administrator and assignee: *See*—
Maniola, Robert J.
Maniola, Robert J., deceased, late of Chicago, Ill., by J. J. Maniola, administrator, assignor to J. J. Maniola, Chicago, Ill. Removable denture. 2,469,339, May 3.
Manke, Raymond F., assignor to Walker Manufacturing Company of Wisconsin, Racine, Wis. Lifting mechanism. 2,469,048, May 3.
Marathon Corporation, assignee: *See*—
Siewet, Edwin C.
Marful Specialties, Incorporated, assignee: *See*—
Lagdon, Samuel W.
Markham, Charels E., St. Louis County, Mo., assignor, by mesne assignments, to Missouri Automatic Control Corporation. Heat distribution control. 2,468,830, May 3.
Markle, Glenn R., Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation. Strip guide. 2,469,169, May 3.
Martin, Howard S.: *See*—
Goldsbarry, Albert W., and Martin.
Martin, James: *See*—
Pelphrey, Harry, and Martin.
Martin, Wesley G., assignor to A. O. Smith Corporation, Milwaukee, Wis. Apparatus for progressively enameling continuous metal sheeting. 2,469,123, May 3.
Mas, José A., Indianapolis, Ind., assignor, by mesne assignments, to Cornell-Dubilier Electric Corporation, South Plainfield, N. J. Vibrating device. 2,468,991, May 3.
Mason, James F., Glen Cove, N. Y., and A. H. Beebe, Jr., Ann Arbor, Mich., assignors to Reynolds Metals Company, Inc., Richmond, Va. Electrolytic sealing of anodized aluminum surfaces. 2,469,237, May 3.
Master Corporation, The, assignee: *See*—
James, Frazier N.
Mastney, Edward J., Berwyn, and J. H. Williams, assignors to Oak Mfg. Co., Chicago, Ill. Control apparatus for tuners. 2,469,170, May 3.
Matchet, James: *See*—
Bridge, Walter, and Matchet.
Mathieson Chemical Corporation, assignee: *See*—
Vincent, George P., and Dubeau.
Mathot, Jacques: *See*—
Contant, Andre, Clement and, Matbot.
Matweeff, Paul, Uncasville, Conn. Harness motion for looms. 2,469,200, May 3.
McArthur, Bruce E., Medina, Ohio, and D. I. Bohn and R. N. Wagner, assignors to Aluminum Company of America, Pittsburgh, Pa. Electrical bus. 2,469,073, May 3.
McCabe, Ira E., Chicago, Ill. Pressure operated switch. 2,468,924, May 3.
McCaffrey, Evelyn, Jamaica, N. Y. Head apparel. 2,468,937, May 3.
McCarthy, Russell J.: *See*—
Rivard, Lawrence B., and McCarthy.
McCarty, Orin P.: *See*—
Palme, Arthur, and McCarty.
McCullough, Jack A.: *See*—
Eitel, William W., and McCullough.
McKeehan, Eugene H., St. Louis, Mo. Garment sleeve block. 2,469,306, May 3.
McLauchlan, John, Royal Oak, assignor to Houdaille-Hershey Corporation, Detroit, Mich. Torch controlling fixture for flame cutting machines. 2,468,938, May 3.
Mechling, Frederick E., Akron, assignor to Selberling Rubber Company, Barberton, Ohio. Self-sealing inner tube demonstration tool. 2,469,307, May 3.
Meier, Richard L., and W. E. Elwell, Berkeley, assignor to California Research Corporation, San Francisco, Calif. Synthetic resins and producing same. 2,469,295, May 3.
Meisser, Christian, Davos-Dorf, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland. Centrifugal compressor for high stage pressures. 2,469,126, May 3.
Mekelburg, Harold L., assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Metal-backed nonwelding contact. 2,468,888, May 3.
Mercier, Jean, New York, N. Y. Mounting for hydraulic shock absorbers. 2,468,939, May 3.
Mercier, Jean, New York, and E. M. Greer, West Hempstead, said Greer assignor to Greer Hydraulics, Inc., Brooklyn, N. Y. Accumulator shell sealing plug. 2,469,171, May 3.
Metropolitan Device Corporation, assignee: *See*—
Kydd, James.
Michigan Tool Company, assignee: *See*—
Pelphrey, Harry, and Martin.
Miescher, Karl, Riehen, and R. Rometsch, Basel, Switzerland, assignors to Ciba Pharmaceutical Products, Inc., Summit, N. J. Process of separating dolsynolic acids and intermediates therefor. 2,469,173, May 3.
Mikkelsen, Andera P., Pleasantville, N. Y. Door latch. 2,469,201, May 3.
Miller, Charles F., Delaware County, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Printing cellulose ester material with acid and direct dyes. 2,468,940, May 3.
Miller, Gordon H., Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Reduction of corrosive action of Friedel-Crafts type catalysts. 2,468,831, May 3.
Miller, Kay, New Brunswick, assignor to Joseph Dixon Crucible Company, Jersey City, N. J. Pencil with body of convolutely wound paper. 2,469,049, May 3.
Miller, William J., Inglewood, Calif. Hanger bracket device. 2,468,992, May 3.
Mine Saefty Appliances Company, assignee: *See*—
Campbell, Edmund M.
Minute Skid Chain Corporation, assignee: *See*—
Lindenthaler, Charles J.
Missouri Automatic Control Corporation, assignee: *See*—
Markham, Charles E.
Monsanto Chemical Company, assignee: *See*—
Blake, Edward S.
Montalbano, Anthony, Baton Rouge, La. Portable propelling apparatus for small fishing craft. 2,468,889, May 3.
Montgomery, Luke H., Nashville, Tenn. Signaling system. 2,468,832, May 3.
Montonna, Ralph E., and L. H. Reyerson, St. Paul, and E. Amdur, assignors to Regents of the University of Minnesota, Minneapolis, Minn. Preparing fibers and yarns. 2,468,771, May 3.
Montoya, Victor M., Caracas, Venezuela. Vertical piano action. 2,469,308, May 3.
Moomaw, Lewis H., Great Neck, assignor to De Jur-Amaco Corporation, Long Island City, N. Y. Motion-picture projector. 2,468,993, May 3.
Moore, Robert J.: *See*—
Greenfelder, Bernard S., and Moore.
Moore, Rockord W., Wichita, Kans. Propeller guard and deflector for outboard motors. 2,468,890, May 3.
Moreau, Jean, Noyelles-sur-Escaut, France. Automatically corrected means for removing beetroot tops. 2,468,994, May 3.
Morris, Earl D., and G. A. Griess, assignors to The Dow Chemical Company, Midland, Mich. Rosin-styrene interpolymers. 2,468,770, May 3.
Morris, Harold J.: *See*—
Rowland, George D., and Morris.
Morris, Rupert C., and J. L. Van Winkle, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Adducts of unsaturated acids with cyclic polymers of hexadienes and their production and utilization. 2,468,769, May 3.
Morris, Rupert C., Berkeley, and E. C. Shokal, Oakland, assignors to Shell Development Company, San Francisco, Calif. Preventing ice formation on surfaces. 2,469,309, May 3.
Morrison, Harry, Pittsburgh, Pa. Height gauge. 2,468,995, May 3.
Mueller, Ervin H., Grosse Pointe, Mich. Hood for gas valves. 2,469,074, May 3.
Mungall, William, Dayton, Ohio. Multiple limit switch device. 2,468,772, May 3.
Munro, George R., Massapequa, and W. C. Dilg, Hewlett, assignors to Waugh Equipment Company, New York, N. Y. Shock absorbing structure for railway draft gears. 2,469,126, May 3.
Murdock, Frederick D., Barrington, and J. A. De Angelis, Cumberland, assignors to H. D. Peck, Providence, R. I. Loom attachment for weaving ladder webbing. 2,469,202, May 3.
Murphy, Harold P., Ridley Park, Pa., assignor to The Electric Storage Battery Company. Container liquid level indicator. 2,468,833, May 3.
Musinski, Joseph J., Burbank, Calif. Illuminating device. 2,468,773, May 3.
Mygaa, Nicholas, West Orange, N. J. Articulate handle for paint brushes and the like. 2,469,050, May 3.
Nash, Thomas L., Parkersburg, W. Va., assignor to American Viscose Corporation, Wilmington, Del. Tow folding device for shipping cartons. 2,468,834, May 3.

National Tube Company, assignee: *See*—
Durfee, Walter W., and Foley.
National Vendors, Inc., assignee: *See*—
Fry, Benjamin W.
Neiser, Joseph B., Oakland, Calif. Clothes drier. 2,468,891, May 3.
Newton, John S., Havertown, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Gas turbine apparatus. 2,469,238, May 3.
New Wrinkle, Inc., assignee: *See*—
Beynon, Nathan T.
Lances, Enrique L.
New York Air Brake Company, The, assignee: *See*—
Hiner, Matthew W.
Nicholls, Ralph J.: *See*—
Bide, Austin E., Nicholls, and Wilkinson.
Nordmark, Walter E., assignor to American Seating Company, Grand Rapids, Mich. Desk structure. 2,469,230, May 3.
Nordquist, Harry E., Seattle, Wash., assignor to Laher Spring & Tire Corp., Oakland, Calif. Vehicle spring construction. 2,468,835, May 3.
Norton, C. W., Jr., assignee: *See*—
Faulhaber, Roland W.
Oak Mfg. Co., assignee: *See*—
Mastney, Edward J., and Williams.
Williams, John H.
O'Brien, Joseph F., Lebanon, and J. B. Cataldo, Annandale, N. J., assignors to John B. Pierce Foundation, New York, N. Y. Electrical circuit breaker. 2,468,774, May 3.
Oetzel, John G., Beloit, Wis., assignor to Warner Electric Brake Manufacturing Company, South Beloit, Ill. Friction element for brakes. 2,469,127, May 3.
Ohio Crankshaft Company, The, assignee: *See*—
Strickland, Harold A., Jr.
Wood, Alden O., and Vaughan.
O'Keeffe, George W., Elkins Park, assignor to Proctor & Schwartz, Inc., Philadelphia, Pa. Supporting girt. 2,468,892, May 3.
Okrent, Jasper J., Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Pulse-modulated wave-signal generator. 2,469,174, May 3.
Olin Industries, Inc., assignee: *See*—
Roemer, William C.
Olson, Ray G., Glenview, Ill., assignor to The Magnavox Company, Fort Wayne, Ind. Compensated thermal motor. 2,468,906, May 3.
Oosterkamp, Wijbe J., and A. W. Vingerhoets, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, as trustee, Hartford, Conn. X-ray tube cooling apparatus. 2,468,942, May 3.
Optimos Equipment Company, assignee: *See*—
Jaffa, Mose.
Orance, Albert, Chicago, Ill. Airplane amusement device. 2,468,893, May 3.
Orr, A. William, Jr., Detroit, Mich., assignor to G. M. and E. Halley. Enrichening device. 2,468,941, May 3.
Osgood, Mildred M., Terre Haute, Ind. Manufacture of marionettes. 2,468,997, May 3.
Ovrebo, Paul J., Dayton, Ohio. Impedance matched thermocouple for coaxial conductors. 2,468,775, May 3.
Palme, Arthur, and O. P. McCarty, Pittsfield, Mass., assignors to General Electric Company. Electric switch. 2,469,203, May 3.
Paransky, Louis, Pittsburgh, Pa., assignor to The Star Bedding Co. Mattress. 2,469,175, May 3.
Parker, Charles M., Kelford, N. C. Welding mask attachment. 2,469,273, May 3.
Parsons, John B., Toledo, Ohio. Pressure fluid servomotor. 2,468,943, May 3.
Parsons, John H., Pontiac, Mich. Retainer-stripper unit for punch presses. 2,468,998, May 3.
Patterson, Louis L., Los Angeles, Calif. Cutter assembly for rotary plows. 2,468,776, May 3.
Paun, Louis R., Granton, Wis. Vibration eliminating support for steering columns. 2,469,075, May 3.
Pavelle Color Incorporated, assignee: *See*—
Rabinowitz, Jacob.
Payne, Nellie M. C., Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. Insecticidal use of fluoroacetamide. 2,469,340, May 3.
Pearce, Albert F., Hampton Hill, assignor to Electric & Musical Industries Limited, Middlesex, England. Holow resonator discharge device. 2,469,240, May 3.
Pearson, Frank A., assignor to Eagle Signal Corporation, Moline, Ill. Cycle timer. 2,469,341, May 3.
Peck, Harry D., assignee: *See*—
Murdock, Frederick D., and De Angelis.
Pecott, Bertha A., administratrix: *See*—
Pecott, Jeremiah A.
Pecott, Jeremiah A., deceased, by B. A. Pecott, administratrix, Lawrence, Mass. Hand loom. 2,469,126, May 3.
Peek, Robert L., Jr., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Magnetostrictive transducer. 2,468,837, May 3.
Peek, Willard R., San Antonio, Tex. Bicycle trailer coupling. 2,468,894, May 3.
Pelphrey, Harry, Detroit, and J. Martin, Ferndale, assignors to Michigan Tool Company, Detroit, Mich. Machine for forming gears. 2,469,310, May 3.
Pennsylvania Furnace and Iron Company, assignee: *See*—
DeFrees, Joseph H.
Pennsylvania Railroad Company, The, assignee: *See*—
Smith, Spencer V.
People in the Territory of the United States, dedicated to the free use of the, assignee: *See*—
Gertler, Samuel I.
Pepperell Manufacturing Company, assignee: *See*—
Russell, Frank H.
Persson, Gunnar J., Ludvika, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Anode tube for ionic valves for high-voltage static current converters. 2,468,836, May 3.
Peters, Helen M., assignee: *See*—
Peters, Leo.
Peters, John F., Leonia, N. J., assignor to American Can Company, New York, N. Y. Can body making machine. 2,468,777, May 3.
Peters, Leo, assignor, by meane assignments, of two-thirds to L. Peters and one-third to H. M. Peters, Evanston, Ill. Package wrapper. 2,469,204, May 3.
Peterson, Karl O., Kansas City, Mo., assignor of one-half to V. H. Doyle, Leonardville, Kans. Adjustable cutter and feeder assembly for harvesters. 2,469,241, May 3.
Pettier, Eugene H., Beaver, Pa. Lifting device. 2,468,999, May 3.
Pfaudler Co., The, assignee: *See*—
Goecke, Rudolph F.
Philco Corporation, assignee: *See*—
Hooker, Howard W.
Sunstein, David E.
Phillips Petroleum Company, assignee: *See*—
Legatski, Harold R., and Crawford.
Schulze, Walter A., and Crouch.
Wagner, Cary R.
Wagner, Cary R., and Axe.
Phillipps, Goddie F.: *See*—
Wilson, Robert M., and Phillipps.
Photoswitch, Incorporated, assignee: *See*—
Thomson, E. Craig.
Pick, Oswald M., Chicago, and B. E. Goodman, Highland Park, assignors to The Florsheim Shoe Company, Chicago, Ill. Shoe construction. 2,468,944, May 3.
Pierce, John B., Foundation, assignee: *See*—
O'Brien, Joseph F., and Cataldo.
Pilla, Frank J., Riverside, N. J., assignor to The Linde Air Products Company. Water-cooled gas blanketed arc-welding torch. 2,468,806, May 3.
Pioneer Gen-E-Motor Corporation, assignee: *See*—
Goldberg, Harry.
Pitometer Log Corporation, assignee: *See*—
Holst, Knute A.
Pittsburgh Plate Glass Company, assignee: *See*—
Swan, Donald R.
Plaistowe, Donald L., and R. P. Shipway, Chelmsford, England, assignors to Radio Corporation of America. Cathode-ray tube deflecting system. 2,469,051, May 3.
Pleasant, Herman E., assignor to Crampton Manufacturing Company, Holland, Mich. Valve-actuating lever. 2,469,000, May 3.
Pohl, Elsa, New York, N. Y. Collapsible luggage carrier. 2,469,242, May 3.
Poltras, Edward J., Holliston, Mass. Abnormal temperature and ground detector alarm system. 2,469,001, May 3.
Potter, James A., Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Current supply apparatus. 2,469,176, May 3.
Poupitch, Ougljesa J., assignor to Illinois Tool Works, Chicago, Ill. Screw locking device. 2,469,311, May 3.
Poupitch, Ougljesa J., assignor to Illinois Tool Works, Chicago, Ill. Screw locking device. 2,469,312, May 3.
Powers, James H., Westport, Conn., assignor to General Electric Company. Waste disposal apparatus. 2,469,205, May 3.
Pratt, John W., Leicester, England, assignor to United Shoe Machinery Corporation, Flemington, N. J. Last support for last inserting machines. 2,468,895, May 3.
Princevalle, Peter: *See*—
Toti, Andrew J., and Princevalle.
Proctor & Schwartz, Inc., assignee: *See*—
O'Keeffe, George W.
Pure Oil Company, The, assignee: *See*—
Goldsbarry, Albert W., and Martin.
Thacker, Carlisle M.
Quattrin, Sante, San Francisco, Calif. Golf practice device. 2,469,002, May 3.
R-B-M Manufacturing Company, assignee: *See*—
Webb, George L.
Rabinowitz, Jacob, Brooklyn, assignor, by mesne assignments, to Pavelle Color Incorporated, New York, N. Y. Photographic printing exposure control method and apparatus. 2,469,076, May 3.
Radio Corporation of America, assignee: *See*—
Atwood, John B., and Trevor.
Beard, Joseph G., and Born.
Beard, Joseph G., and Dressler.
Canfora, Arthur E.
Day, James R.
Fraser, Robert M.
Gehman, John B., and Turner.
Goldberg, Edwin A.
Hillier, James.
Plaistowe, Donald L., and Shipway.
Stafford, Richard H.
Rahe, Samuel E., Springfield Gardens, N. Y. Device for dispensing matches. 2,469,052, May 3.

Rasmussen, Carl C. H., Silver Spring, Md. Cooking equipment. 2,468,778, May 3.

Rawlins, Herbert L.: *See*—
Wallace, James M., Rawlins, Cumming, and Aspey.

Raytheon Manufacturing Company, assignee: *See*—
Butler, Benjamin J.
Dawson, John W.
Klemperer, Hans.
Smith, Charles G.

Regents of the University of Minnesota, assignee: *See*—
Montonna, Ralph E., and Reyerson.

Reitmann, Genevieve B., Baltimore, Md. Spectrophotometric curve reading apparatus. 2,469,120, May 3.

Rein, Charles, Scarsdale, N. Y. Electrical switch. 2,469,274, May 3.

Reits, Charles A., Park Ridge, and R. F. Lecture, Chicago, Ill., assignors to Interchemical Corporation, New York, N. Y. Printing inks. 2,468,779, May 3.

Rensbed-Mason Company, assignee: *See*—
Maltese, Joseph S.

Research Corporation, assignee: *See*—
Cohn, Edwin J.

Resnick, Raymond: *See*—
Fox, Leonard, and Resnick.

Rey, Augustin, assignor to Comptoir des Textiles Artificiels, Paris, France. Filtering apparatus. 2,468,838, May 3.

Reyerson, Lloyd H.: *See*—
Montonna, Ralph E., and Reyerson.

Reynolds Metals Company, Inc., assignee: *See*—
Mason, James F., and Beebe, Jr.

Rhinelander Paper Company, assignee: *See*—
Fries, Karl W.

Rich, Theodore A., Schenectady, N. Y., assignor to General Electric Company. X-ray absorption photometer. 2,469,200, May 3.

Richardson, Henry M., Springfield, Mass., assignor of one-half to The Grotelite Company, Inc., Bellevue, Ky., and one-half to Lima-Hamilton Corporation, Hamilton, Ohio. Method and apparatus for molding plastics. 2,469,342, May 3.

Rickenmann, Alfred, Kusnacht near Zurich, Switzerland. Machine tool with automatic feed derive. 2,469,077, May 3.

Rifen, John, Brainerd, Minn. Bottle attachment. 2,468,780, May 3.

Rivard, Lawrence B., Dearborn, and R. J. McCarthy, Detroit, assignors to Ford Motor Company, Dearborn, Mich. Adjustable automobile seat. 2,469,243, May 3.

Robison, Sidney J., Chicago, Ill., assignor to Universal Atlas Cement Company. Seal for rotary kilns. 2,469,078, May 3.

Rocchini, Albert G., Springdale, assignor to Gulf Research & Development Company, Pittsburgh, Pa. Lubricating oil compositions. 2,469,003, May 3.

Rodeeci, Nicholas, Minneapolis, Minn. Power lawn mower. 2,468,839, May 3.

Rodman, Isaac P., Jr., West Orange, assignor to Celluplastic Corporation, Newark, N. J. Method of and apparatus for molding. 2,469,130, May 3.

Roedding, Gordon E., Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich. Spring mounted two-position prismoidal rear-view mirror. 2,469,207, May 3.

Roemer, William C., assignor to Olin Industries, Inc., New Haven, Conn. Automatic gear for automatic and semi-automatic firearms. 2,469,053, May 3.

Rogantl, Henry P., Dayton, Ohio. Camera control for bombardment aircraft. 2,468,781, May 3.

Rohn, Wilhelm, Hanau on Main, Germany; vested in the Attorney General of the United States. Instrument for measuring and indicating the intensity of gas currents. 2,468,896, May 3.

Rometsch, Rudolf: *See*—
Miescher, Karl, and Rometsch.

Ronson Art Metal Works, Inc., assignee: *See*—
Burchett, Ray L.

Rope, Barton W.: *See*—
Johnson, George C., and Rope.

Rosebrough, John D., assignor to American Blower Corporation, Detroit, Mich. Back tension drive. 2,469,004, May 3.

Rosenbloom, Harry, Detroit, Mich. Machine tool support. 2,469,079, May 3.

Rosin, Seymour, and G. M. Cressaty, New York, N. Y.; said Rosin assignor to said Cressaty. Unitary lens unit. 2,469,080, May 3.

Ross, Donald E., Eagle Rock, and W. E. Stofer, North Hollywood, assignors to H. S. Heller, Los Angeles, Calif. Interchangeable magnetic tranaducer and switching system. 2,468,782, May 3.

Ross, Walter G., Berkley, assignor to Chrysler Corporation, Highland Park, Mich. Inflatable door sealing system. 2,469,131, May 3.

Rossman, Edwin F., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Hydraulic buffer. 2,469,275, May 3.

Rossman, Edwin F., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Sediment trap for hydraulic shock absorbers. 2,469,276, May 3.

Rothe, Walter F., Washington, D. C., Mailbag. 2,468,897, May 3.

Rothrock, James G., Everett, Wash. Clothes-drying rack. 2,469,208, May 3.

Rowland, George D., Dearborn, and H. J. Morris, Wayne, assignors to Ford Motor Company, Dearborn, Mich. Independent front wheel suspension. 2,469,244, May 3.

Ruedi, Arthur F., Hammond, Ind., assignor to Universal Atlas Cement Company. Refractory concrete, mix therefor, and making. 2,469,081, May 3.

Ruffner, Paul E., Columbus, Ohio. Foldable leaf memoranda calendar having a pocketed backing member. 2,469,177, May 3.

Russell, Frank H., Needham, assignor to Pepperell Manufacturing Company, Boston, Mass. Treating fabrics and resulting product. 2,469,245, May 3.

Russell, John L., assignor to The Bristol Company, Waterbury, Conn. Magnetostrictive condition-responsive apparatus. 2,469,005, May 3.

Ityland, Lloyd B., El Cerrito, and Miroslav Tamele, Oakland, assignors to Shell Development Company, San Francisco, Calif. Catalyst for cracking hydrocarbons. 2,469,314, May 3.

Izepela, Stanley, Philadelphia, Pa. Eccentric drive gear mechanism. 2,469,313, May 3.

Sachanen, Alexander N.: *See*—
Caesar, Philip D., and Sachanen.

Salvans, Jacinto F., Barcelona, Spain. Square section cable for power transmission. 2,469,178, May 3.

Sargent, Albert F.: *See*—
Johnson, Nellie S., and Sargent.

Sasser, John D., assignor to The Steel Products Engineering Company, Springfield, Ohio. Altitude responsive control and signal device. 2,468,945, May 3.

Scanlon, Frank B., Beachwood, N. J. Door operated safety device for oil burning furnaces. 2,469,082, May 3.

Schaefer, Carl F.: *See*—
Schwartzwalder, Karl.

Schaefer, Frederic, Pittsburgh, Pa. Brake beam. 2,469,083, May 3.

Schafroth, Werner, Brookline, assignor to International Staple and Machine Company, Clifton Heights, Pa. Stapling machine. 2,469,054, May 3.

Schafroth, Werner, Brookline, assignor to International Staple and Machine Company, Clifton Heights, Pa. Stapling machine. 2,469,055, May 3.

Scheidort, Marvel W., Syracuse, N. Y., assignor to General Electric Company. Single-ended antenna system. 2,469,209, May 3.

Schenker, Abraham W., New York, N. Y. Body resting appliance. 2,469,084, May 3.

Schmidt, Benjamin F., Los Angeles, Calif. Power conversion attachment. 2,469,277, May 3.

Schmidt, Werner H.: *See*—
Ziela, Norbert W., and Schmidt.

Schneider, Hubert A.: *See*—
L'Esperance, Louis, and Schneider.

Schnieble, Claude B., assignee: *See*—
Hermann, Clarence C.

Schock, Gusmer & Co. Inc., assignee: *See*—
Schock, Robert C.

Schock, Robert C., New Rochelle, N. Y., assignor to Schock, Gusmer & Co. Inc., Hoboken, N. J. Heater for wort kettles. 2,468,840, May 3.

Schultze, Albert, Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Refrigeration. 2,469,179, May 3.

Schulze, Walter A., and W. W. Crouch, Bartlesville, Okla., assignors to Phillips Petroleum Company. Manufacture of sulfur compounds. 2469,132, May 3.

Schwab, Edward L., Chicago, Ill. Card support and display. 2,469,210, May 3.

Schwartz, Herman C., New Milford, N. J. Connecting coaxial cables. 2,468,783, May 3.

Schwartzwalder, Karl, Holly, and C. F. Schaefer, Flint, assignors to General Motors Corporation, Detroit, Mich. Sealing means and method for spark plugs. 2,469,211, May 3.

Scott, Lloyd H., Garden City, N. Y., assignor, by mesne assignments, to Jack & Heints Precision Industries, Inc., Cleveland, Ohio. Magneto electric machine. 2,469,133, May 3.

Scott, Walter F., Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Voltage regulator tube circuit. 2,469,280, May 3.

Scripture, George, Oakland, Calif. Electromagnetic valve-keeper remover and retriever. 2,469,056, May 3.

Seagraves, Hal E., Wilton, Conn. Autoloading pistol. 2,468,784, May 3.

Sealey, William C., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Screwed sleeve electrical connector. 2,468,785, May 3.

Sealey, William C., Wauwatosa, and F. W. Arend, West Allis, assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Electromagnetic core assembly and method. 2,468,786, May 3.

Sears, Ralph A., Bexley, Ohio. Telephone alarm system. 2,469,278, May 3.

Selberling Rubber Company, assignee: *See*—
Mechling, Frederick E.

Seller, Fritz, Auvernier, assignor to Textile Researchea Limited, Basel, Switzerland. Manufacture of knitted wear true to shape. 2,469,134, May 3.

Selts, John L.: *See*—
Breisch, Edgar W., and Selts.

Senauke, Alexander, assignor to Amperex Electronic Corp., Brooklyn, N. Y. Self-contained high-frequency oscillator. 2,469,180, May 3.

Servel, Inc., assignee: *See*—
Andersson, Sven W. E.
Bulkley, William L.
Schultze, Albert.

Seyferth, Carl O., assignor to West Michigan Steel Foundry Company, Muskegon, Mich. Coupling for tractors and semitrailers. 2,469,279, May 3.

Sharpe, Catherine D., executrix: *See*—
Sharpe, John S.

Sharpe, John S., Haverford, Pa.; C. D. Sharpe, executrix of said J. S. Sharpe, deceased. Aerodynamic impelling device. 2,468,787, May 3.

Sharples Chemicals Inc., assignee: *See*—
Eaton, John L., and Fenn.

Shaw, Joe C., assignor to Young Radiator Company, Racine, Wis. Temperature-regulating valve mechanism for heat-exchange devices. 2,469,212, May 3.

Shaw, Joe C., assignor to Young Radiator Company, Racine, Wis. Heat exchanger. 2,469,315, May 3.

Shaw, Joe C., assignor to Young Radiator Company, Racine, Wis. Heat-exchange unit. 2,469,316, May 3.

Shea, Richard F., Bridgeport, Conn., assignor to General Electric Company, Recording system. 2,469,213, May 3.

Shelby, Eugene F., Long Beach, Calif. Apparatus for high evacuation. 2,469,006, May 3.

Shell Development Company, assignee: *See*—
Adelson, David E., and Gray, Jr.
Greenafelder, Bernard S., and Moore.
Morris, Rupert C., and Shokal.
Morris, Rupert C., and Van Winkle.
Ryland, Lloyd B., and Tamele.
Shokal, Edward C., and Whitehill.

Shepherd, Daniel F., assignor to Carrier Corporation, Syracuse, N. Y. Reciprocating compressor having means for separating gaseous refrigerant from foam. 2,469,086, May 3.

Sheppard, Richard H., Hanover, Pa. Hydraulic power transmission. 2,469,085, May 3.

Sherman, Wilbur G., assignor to Accurate Tool and Engineering Company, San Diego, Calif. Chuck. 2,468,946, May 3.

Shingle, Lester H., Philadelphia, Pa. Transmission belt. 2,468,898, May 3.

Shipway, Roger P.: *See*—
Plaistowe, Donald L., and Shipway.

Shokal, Edward C.: *See*—
Morris, Rupert C., and Shokal.

Shokal, Edward C., Oakland, and L. N. Whitehill, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Insecticidal and fungicidal composition. 2,469,317, May 3.

Shuler, Sanford A., Jr., Schenectady, N. Y., assignor to General Electric Company. Centrifugal compressor. 2,469,214, May 3.

Siebring, Owen C., George, Iowa. Manure loader. 2,469,007, May 3.

Siegel, Sigmund, Brooklyn, N. Y. Chest protector. 2,468,841, May 3.

Siewert, Edwin C., Wausau, assignor to Marathon Corporation, Rothschild, Wis. Spoon package. 2,469,343, May 3.

Simmon, Alfred, Jackson Heights, assignor to Simmon Brothers Inc., Long Island City, N. Y. Manual fine focusing means for auto-focus enlargers. 2,469,009, May 3.

Simmon, Alfred, Jackson Heights, and L. L. Weisglass, New York, assignors to Simmon Brothers, Inc., Long Island City, N. Y. Roll film camera with detachable magazine. 2,469,008, May 3.

Simmon Brothers Inc., assignee: *See*—
Simmon, Alfred.
Simmon, Alfred, and Weisglass.

Sinclair, Charles W., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich. Rim. 2,468,947, May 3.

Slater, Peter J., East Hartford, assignor to The South Windsor Manufacturing Company, South Windsor, Conn. Power attachment for tractors. 2,469,181, May 3.

Slater, Peter J., East Hartford, assignor to The South Windsor Manufacturing Company, South Windsor, Conn. Pneumatic clipper. 2,469,182, May 3.

Slonczewski, Thaddeus: *See*—
Felch, Edwin P., Jr., and Slonczewski.

Small, Walter W., assignor to Auster Limited, Birmingham, England. Panel mounting. 2,469,183, May 3.

Smicker, Emma A., assignor to Blossom Products Corporation, Allentown, Pa. Infant's shirt. 2,469,246, May 3.

Smith, A. O., Corporation, assignee: *See*—
Andrus, Orrin E.
Martin, Wesley G.

Smith, Charles G., Medford, assignor to Raytheon Manufacturing Company, Newton, Mass. Arc discharge device. 2,468,788, May 3.

Smith, Richard H., Newton, Mass. Razor. 2,469,010, May 3.

Smith, Rolf M., assignor to General Motors Corporation, Dayton, Ohio. Sealed motor-compressor unit. 2,468,946, May 3.

Smith, Sidney R., Jr., Pittsfield, Mass., assignor to General Electric Company. Protective device. 2,469,215, May 3.

Smith, Spencer V., Wayne, assignor to The Pennsylvania Railroad Company, Philadelphia, Pa. Train performance calculator and recorder. 2,469,011, May 3.

Smith, Wheeler B., Detroit, Mich. Tape holder. 2,469,247, May 3.

Smith, Will K., Arcadia, Calif. Hoe attachment for rakes. 2,469,012, May 3.

Snyder, Leland H., Chicago, Ill., assignor, by mesne assignments, to Knapp-Monarch Company, St. Louis, Mo. Massage vibrator. 2,468,949, May 3.

Sobota, John, assignor to Fort Howard Paper Company, Green Bay, Wis. Evaluating paper toweling or the like. 2,469,013, May 3.

Societe Francaise Radio-Electrique, assignee: *See*—
Dansin, Andre, and Despois.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Armstrong, Eldon L., and Beman.
Branson, Otis L.
Burg, Martin S.
Caesar, Philip D., and Sachanen.
Crowley, John A., Jr.
Evans, Louis P.
Hartongh, Howard D., and Chung.
Johnson, George C., and Rope.
Killingsworth, Robert B.
Kosak, Alvin L., and Hartough.
Stover, William A.

South Windsor Manufacturing Company, The, assignee: *See*—
Slater, Peter J.

Specialty Packaging Company, assignee: *See*—
Cargill, Louis H.

Spence Engineering Company, Inc., assignee: *See*—
Spence, Paulsen.

Spence, Paulsen, Hot Springs, Ark., assignor to Spence Engineering Company, Inc., Walden, N. Y. Safety device for temperature regulators. 2,469,057, May 3.

Sperry Corporation, The, assignee: *See*—
Hansen, William W., and Varian.
Webber, Hugh E.

Sporleder, Robert C., Mill Valley, Calif. Bottom feed device for paper sheets. 2,468,842, May 3.

Spunt, Leo, Detroit, and B. A. Gould, Highland Park, assignors to General Motors Corporation, Detroit, Mich. Suspension spring seat. 2,469,216, May 3.

Stafford, Richard H., Lamoni, Iowa, assignor to Radio Corporation of America. Plural function circuit. 2,469,261, May 3.

Stålhandske, David, Bofors, Sweden. Chuck. 2,469,014, May 3.

Standard Oil Company, assignee: *See*—
Anderson, John A., and Voorhees.

Standard-Vacuum Oil Company, assignee: *See*—
Jones, Norman L.

Stanmyre, Rudolph W., Syracuse, N. Y. Device for indicating the sum of the intensity and duration of sound. 2,469,782, May 3.

Star Bedding Co., The, assignee: *See*—
Paransky, Louis.

Stareck, Jesse E., and L. M. Corilas, Detroit, Mich., assignors to United Chromium, Incorporated, New York, N. Y. Method and compositions for prodncing surface conversion coatings on zinc. 2,469,015, May 3.

Steel Products Engineering Company, The, assignee: *See*—
Sasser, John D.

Steele, Homer M., Ashland, Ky. Fender door lock. 2,469,283, May 3.

Stereoptics Limited, assignee: *See*—
Dudley, Leslie P. C. J.

Stilbert, Elmer K.: *See*—
Young, Arthur E., and Stilbert.

Stofer, Willard E.: *See*—
Ross, Donald E., and Stofer.

Stone, John T., Baltimore, Md. Tray type fuel oil burner. 2,469,135, May 3.

Stone, John T., Baltimore, Md. Gun type burner. 2,469,136, May 3.

Stopper, George M., Glendale, Calif. Gravity fed disk magazine. 2,469,016, May 3.

Stover, William A., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Homogeneous gaseous phase catalytic alkylation of isobutane with cyclopropane. 2,469,344, May 3.

Stoye, Kurt, assignor, by mesne assignments, to L. C. Krazinski, New York, N. Y. Cigarette and pipe lighter. 2,469,248, May 3.

Strickland, Harold A., Jr., Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio. Stock guide and power control for electric furnaces. 2,468,789, May 3.

Strong, Elbie C., Sunnyside, assignor to Waugh Equipment Company, New York, N. Y. Vibration indicator. 2,469,137, May 3.

Sulter, Earle E., United States Navy. Aircraft landing gear. 2,468,790, May 3.

Sullivan, Ramon E., San Francisco, Calif. Game device. 2,469,058, May 3.

Sulzer, Frères, Société Anonyme, assignee: *See*—
Meisser, Christian.

Sun Rubber Company, The, assignee: *See*—
Kempthron, David C.

Sundet, Sherman A., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Terminating the polymerization of butadiene-1,3 hydrocarbons. 2,469,017, May 3.

Sunstein, David E., Elkins Park, Pa., assignor to Philco Corporation. Apparatus for electrically testing and classifying resistors. 2,468,843, May 3.

Suter, Chester M.: *See*—
Albertson, Noel F., Archer, and Suter.

Sutherland, Carl H., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Spring commutator. 2,468,844, May 3.

Swan, Donald R., Berea, Ohio, assignor, by mesne assignments, to Pittsburgh Plate Glass Company, Pittsburgh, Pa. Low viscosity polyvinyl butyral resins and making same. 2,469,318, May 3.

Swan, Donald R., Berea, Ohio, assignor, by mesne assignments, to Pittsburgh Plate Glass Company, Pittsburgh, Pa. Sanding sealers embodying polyvinyl butyral resins. 2,469,319, May 3.

Swan, Donald R., Berea, Ohio, assignor, by mesne assignments, to Pittsburgh Plate Glass Company, Pittsburgh, Pa. Coating compositions embodying polyvinyl butyral resins and making same. 2,469,320, May 3.

Swanson, Gunner E., New Britain, Conn. Cylinder lock key retainer and positioner. 2,469,018, May 3.

Swartz, Clark, Cody, Wyo. Derrick mover. 2,469,087, May 3.

Sway, Henry C., Bridgeport, Conn., assignor to General Electric Company. Snap-action thermostatic switch. 2,469,217, May 3.

Swenson Evaporator Company, assignee: *See*—
Courtier, Edward W.

Symington-Gould Corporation, The, assignee: *See*—
Barrows, Donald S.

Symonds, Robert H.: *See*—
Hutt, Stanley, and Symonds.

Tabler, Herbert K., assignor to I. Tabler, Plymouth, Ill. Farm gate. 2,469,019, May 3.

Tabler, Imegene, assignee: *See*—
Tabler, Herbert K.

Tamele, Miroslav: *See*—
Ryland, Lloyd R., and Tamele.

Teot, Arthur S.: *See*—
Griess, Gerald A., and Teot.

Texas Company, The, assignee: *See*—
Miller, Gordon H.

Textile Researchee Limited, assignee: *See*—
Seiler, Frits.

Thacker, Carlisle M., Highland Park, assignor to The Pure Oil Company, Chicago, Ill. Alkylation of hydrocarbons. 2,468,899, May 3.

Thiokol Corporation, assignee: *See*—
Alexander, Robert O.

Thiry, Leon F., Montclair, N. J., assignor to The General Tire & Rubber Company, Akron, Ohio. Engine mount. 2,468,900, May 3.

Thiry, Leon F., Montclair, N. J., assignor to The General Tire & Ruber Company, Akron, Ohio. Cushioning and vibration damping support. 2,468,901, May 3.

Thomas, Charles W. I., Market Drayton, England. Sponge-down apparatus. 2,469,184, May 3.

Thomas, Henry P., Fayetteville, N. Y., assignor to General Electric Company. Negative feed-back transmission system. 2,469,218, May 3.

Thompson, Jason F., East St. Louis, Ill., assignor to Aluminum Company of America, Pittsburgh, Pa. Producing alumina. 2,469,088, May 3.

Thompson, Leslie E., London, England, assignor, by mesne assignments, to The Union Switch and Signal Company, Swissvale, Pa. Alternating electric current rectifier. 2,468,845, May 3.

Thompson Products, Inc., assignee: *See*—
Booth, James H.

Thomson, E. Craig, Boston, assigner to Photoswitch, Incorporated, Cambridge, Mass. Conductivity control. 2,468,791, May 3.

Thomson, Robert D., Lynn, Mass. Awning hangers and suspending awnings on said hangers. 2,469,020, May 3.

Tibores, Alexander J.: *See*—
Zsiner, John, and Tibores.

Toti, Andrew J., and P. Princevalle, Modesto, Calif. Automatic fowl picker. 2,469,345, May 3

Trainor, Foster J., Holly Hill, Fla. Electric lamp and socket. 2,468,846, May 3.

Trainor, Foster J., assignor to Disto Corporation, Holly Hill, Fla. Snap action coupling device. 2,468,847, May 3.

Trainor, Foster J., assignor to Disto Corporation, Holly Hill, Fla. Snap action coupling device. 2,468,848, May 3.

Trainor, Foster J., Holly Hill, Fla. Detachable coupling. 2,468,849, May 3.

Trevor, Bertram: *See*—
Atwood, John B., and Trevor.

Troutman Shirt Company, assignee: *See*—
Brown, Holwin T.

Truckseis, David E., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Voltage regulation. 2,468,850, May 3.

Tullis, Boyd W., assignor to The Coleman Company, Inc., Wichita, Kans. Portable stove. 2,469,185, May 3.

Turk, Amos, Mount Lebanon, Pa., assignor of fifty per cent to P. D. Boone, Washington, D. C. Oxidized oleđn liquids. 2,469,059, May 3.

Turner, Alfred H.: *See*—
Gehman, John B., and Turner.

Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Bobbin check for weft replenishing looms. 2,469,089, May 3.

Tydeman, Clarence W., San Mateo County, assignor to General Engineering and Dry Dock Corporation, San Francisco, Calif. High-speed grinding spindle. 2,469,186, May 3.

Union Asbestos & Rubber Co., assignee: *See*—
Landwall, John S.

Union Switch and Signal Company, The, assignee: *See*—
Breisch, Edgar W., and Seitz.
Douglass, Myrl R.
Thompson, Leslie E.
Van Glider, Burrows C.

United Aircraft Corporation, assignee: *See*—
Dickerman, Fred N.

United Chromium, Incorporated, assignee: *See*—
Stareck, Jesse E., and Corliss.

United Shoe Machinery Corporation, assignee: *See*—
Burns, Francis A.
Jergensen, Bernhardt.
Pratt, John W.

Universal Atlas Cement Company, assignee: *See*—
Robison, Sidney J.
Ruedi, Arthur E.

Universal Oil Products Company, assignee: *See*—
Iverson, John O.

Van Glider, Burrows C., North Wales, assignor to The Union Switch and Signal Company, Swissvale, Pa. Transmitting apparatus for inductive carrier railway train communication systems. 2,469,138, May 3.

Van Horne Kaestner Leather Co., assignee: *See*—
Garratt, Henry.

Van Winkle, John L.: *See*—
Morris, Rupert C., and Van Winkle.

Varian, Russell H.: *See*—
Hansen, William W., and Varian.
Hansen, William W., and S. F. and R. H. Varian.

Varian, Sigurd F.: *See*—
Hansen, William W., and S. F. and R. H. Varian.

Vaughan, John T.: *See*—
Wood, Alden O., and Vaughan.

Venger, Jacob: *See*—
Bennett, Irving, Venger, and Waddell.

Ventre, Emil K., Baton Rouge, La., assignor to United States of America as represented by the Secretary of Agriculture. Extraction of aconitic acid from sugarcane. 2,469,090, May 3.

Vetter, Herman, Los Angeles, Calif. Portable ice skating floor. 2,469,021, May 3.

Villiger, Eugen, assignor to Aktiengesellschaft Fuer Technische Studien, Zurich, Switzerland. Double-walled body for hot gases or vapors under superatmospheric pressure. 2,468,902, May 3.

Villiger, Eugen, assignor to Aktiengesellschaft Fuer Technische Studien, Zurich, Switzerland. Vertical tubular heat exchanger. 2,468,903, May 3.

Vincent, George P., Briarcliff Manor, N. Y., and A. L. Dubeau, Rumford, R. I., assignors to Mathieson Chemical Corporation. Scouring cellulosic textiles using steam. 2,469,249, May 3.

Vingerhoets, Antonius W.: *See*—
Oosterkamp, Wijbe J., and Vingerhoets.

Von Schrenk, Alma, New York, N. Y. Lady's head covering. 2,469,250, May 3.

Voorhes, Vanderveer: *See*—
Anderson, John A., and Voorhees.

Vosbikian, Peter S., and T. S. Vosbikian, Melrose, Pa. Flexible mop head. 2,469,080, May 3.

Vosbikian, Thomas S.: *See*—
Vosbikian, Peter S. and T. S.

Waddell, George C.: *See*—
Bennett, Irving, Venger, and Waddell.

Wagner, Cary R., Utica, Ohio, assignor to Phillips Petroleum Company. Production of carbon bisulfide. 2,468,904, May 3.

Wagner, Cary R., Utica, Ohio, and W. N. Axe, Bartlesville, Okla., assignors to Phillips Petroleum Company. Drilling fluids and using same. 2,468,792, May 3.

Wagner, Robert J.: *See*—
McArthur, Bruce E., Bohn, and Wagner.

Wahlberg, Eric C., Stamford, assignor to Electrolux Corporation, Old Greenwich, Conn. Electric motor control system. 2,469,139, May 3.

Wahlberg, Eric C., Stamford, assignor to Electrolux Corporation, Old Greenwich, Conn. Synchronizing system for geared motors. 2,469,140, May 3.

Walker Manufacturing Company of Wisconsin, assignee: *See*—
Manke, Raymond F.

Walker, Ronald W., and W. G. Jamieson, Glasgow, Scotland. Computer for determining the correct proportions of ingredients for a selected mixture. 2,469,022, May 3.

Wallace, James M., Braddock, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Reclosing circuit interrupter. 2,468,851, May 3.

Wallace, James M., Braddock, H. J. Rawlins, Swissvale, J. M. Cumming, and W. S. Aspey, Turtle Creek, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,468,852, May 3.

Wallsten, Walfred A.: *See*—
Widerberg, Oscar A., and Wallsten.

War, The United States of America as represented by the Secretary of, assignee: *See*—
Groh, Bernard C.

Warner Electric Brake Manufacturing Company, assignee: *See*—
Oetzel, John G.

Warneck, Orin B., and R. Benner, Nampa, Idaho. Power digger and loader. 2,469,187, May 3.

Warren, John B., Jr., Houston, Tex. Detecting wear on bits. 2,468,905, May 3.

Watkins, Randell C.: *See*—
Wuerl, Rudolph A., and Watkins.

Watter, Michael, assignor to The Budd Company, Philadelphia, Pa. Fatigue-testing machine. 2,469,346, May 3.

Watts, Roy W., Calgary, Alberta, Canada. Vibratory bridge for stringed musical instruments. 2,469,091, May 3.

Waugh Equipment Company, assignee: *See*—
Munro, George R., and Ulig.
Strong, Elbie C.

Webb, George L., assignor to R-B-M Manufacturing Company, Logansport, Ind. Cutout relay system. 2,469,092, May 3.

Webber, Hugh E., Hempstead, N. Y., assignor to The Sperry Corporation. High-frequency resistor. 2,468,793, May 3.

Wedler, Frederick C.: *See*—
Kennedy, Edgar S., and Wedler.

Weisglass, Louis L.: *See*—
Simon, Alfred, and Weisglass.

Werner, George K., assignor to M-K Enterprises, Inc., Chicago, Ill. Variable phase shifter. 2,469,188, May 3.

West, Howard K.: *See*—
Berger, Emil J., and West.

Westinghouse Electric Corporation, assignee: *See*—
Jernstedt, George W.
Newton, John S.
Sutherland, Carl H.
Wallace, James M.
Watlace, James M., Rawlins, Cumming, and Aspey.

West Michigan Steel Foundry Company, assignee: *See*—
Seyferth, Carl G.

Wheel Trueing Tool Company, assignee: *See*—
Bruce, Stanford P.

White, Chester M., assignor to Genesee Research Corporation, Rochester, N. Y. Flushing fluid for hydraulic brake systems. 2,469,284, May 3.

White, Chester M., assignor to Genesee Research Corporation, Rochester, N. Y. Hydraulic pressure transmitting fluid. 2,469,285, May 3.

White, Edward R., New Rochelle, N. Y. Envelope. 2,469,251, May 3.

White, William, Newark, N. J. Pin spot marker for bowling alleys. 2,469,210, May 3.

White, William G., Aberdeen, Wash. Pivotal stake and latch therefor. 2,469,023, May 3.

White, William G., Aberdeen, Wash. Stake buck. 2,469,093, May 3.

Whitehead, William, Forest Hills, N. Y., assignor to Celanese Corporation of America. Precision measuring instrument having a thread for a motion transmission link. 2,468,906, May 3.

Whitehill, Lynwood N.: *See*—
Shokal, Edward C., and Whitehill.

Wicker, Joseph, Chicago, Ill. Work holder fixture. 2,469,094, May 3.

Widerberg, Oscar A., and W. A. Wallsten, Worcester, Mass., assignors to The American Steel and Wire Company of New Jersey. Apparatus for refinishing tampico rolls and brushes. 2,469,095, May 3.

Wiedman, Edward L., Tonawanda, N. Y. Snowplow. 2,468,950, May 3.

Wiegert, Wallace A., and E. W. Dunham, Floral Park, N. Y. Mounting wall and celing paneling. 2,469,252, May 3.

Wilbur, Paul C., San Jose, Calif., assignor to Food Machinery and Chemical Corporation. Vented cooker valve. 2,468,794, May 3.

Wilkinson, Peter A.: *See*—
Bide, Austin E., Nicholls, and Wilkinson.

Williams, John H.: *See*—
Maatney, Edward J., and Williams.

Williams, John H., assignor to Oak Mfg. Co., Chicago, Ill. Preselector for radio-frequency network. 2,469,189, May 3.

Williamson, John A., assignor to The Carborundum Company, Niagara Falls, N. Y. Abraeive web material. 2,468,853, May 3.

Wilson, Robert M., and G. F. Phillipps, Battle Creek, Mich. Electric fence post. 2,468,907, May 3.

Wilson, William C., Pittsburg, Kans. Ventilator. 2,469,090, May 3.

Windhorst, Pearl R., Oakland, Calif., assignor to American Seating Company, Grand Rapids, Mich. Unitary chalk and eraser holder. 2,469,347, May 3.

Winkler, Albert H., assignor to Bendix Aviation Corporation, South Bend, Ind. Pressure responsive valve mechanism. 2,469,038, May 3.

Winters, Starling, Englewood, N. J. Flare. 2,468,795, May 3.

Winthrop-Stearns, Inc., assignee: *See*—
Albertson, Noel F., Archer, and Suter.
Huber, Wolfgang, and Boehme.

Wong, James T., Vallejo, Calif. Making preformed packing. 2,468,797, May 3.

Wood, Alden O., Parma, and J. T. Vaughan, Shaker Heights, assignors to The Ohio Crankshaft Company, Cleveland, Ohio. Method of and apparatus for dual coil induction heating. 2,468,796, May 3.

Wood, Louis S., Burlingame, Calif. Power-operated tail gate mechanism for vehicles. 2,469,321, May 3.

Woodman, Thomas C., London, England, assignor, by mesne assignments, to Celanese Corporation of America. Loom temple. 2,468,908, May 3.

Woodring, William R. Van Nuys, Calif. Box connector for flexible electrical conduits. 2,468,854, May 3.

Wrenn, Herbert A., Lanham, Md. Variable capacity sliding vane pump. 2,469,097, May 3.

Wuerl, Rudolph A., and R. C. Watkins, Butte, Mont. Christmas tree holder. 2,469,280, May 3.

Yeager, Evelyn M., executrix: *See*—
Yeager, Milburn E., and Cnossen.

Yeager, Milburn E., Needham, and A. J. Cnossen, Reho-both, Mass.; E. M. Yeager, executrix of said M. E. Yeager, deceased; said E. W. Yeager assignor to said Cnossen. Auxiliary air heater. 2,468,906, May 3.

Yokel, Frank, Pittsburgh, Pa. Refractory element for electric heaters. 2,469,287, May 3.

Young, Arthur E., and H. M. Hoogsteen, assignors to The Dow Chemical Company, Midland, Mich. Modified styrene-linseed oil interpolymers. 2,468,798, May 3.

Young, Arthur E., and E. K. Stilbert, assignors to The Dow Chemical Company, Midland, Mich. Cellulose derivative compositions. 2,469,348, May 3.

Young Radiator Company, assignee: *See*—
Shaw, Joe C.

Zeidler, Kurt E., Chicago, Ill. Blind bolt device. 2,469,349, May 3.

Ziels, Norbert W., Leonia, and W. H. Schmidt, Grantwood, N. J., assignors to Lever Brothers Company, Cambridge, Mass. Hydrogenating fat. 2,468,799, May 3.

Zimmer, Albert E., assignor to Enterprise Railway Equipment Company, Chicago, Ill. Door operating mechanism for dump cars. 2,469,220, May 3.

Zsiner, John, and A. J. Tibores, Detroit, Mich; said Zsiner assignor to said Tibores. Scooter construction. 2,468,910, May 3.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 3D DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Blower, Axial. E. A. Stalker. Re. 23,108, May 3.
Conveyer, Extensible. L. A. Mapes. Re. 23,107, May 3.
Vessel, Double wall. E. A. Gullck. Re. 23,106, May 3.

LIST OF DESIGN INVENTIONS

Airplane. E. V. Eichman. 153,590, May 3.
Ampoule sealing device. J. H. Brewer. 153,584, May 3.
Ash tray. A. Scherta. 153,640, May 3.
Awning, Louvered corrugated metal. S. K. Peeples. 153,622, May 3.
Bottle. E. N. Graham. 153,600, May 3.
Bottle or similar article. T. D'Addario. 153,586, May 3.
Brooch or similar article. A. Philippe. 153,624–7, May 3.
Brooch or similar article. A. Philippe. 153,629–30, May 3.
Cabinet for a heater or the like. L. H. Wilson. 153,655, May 3.
Cabinet, Radio phonograph. L. G. Stone. 153,646, May 3.
Calendar and desk pad unit, Combined. E. Frankl. 153,596, May 3.
Can or similar article. G. C. Erb. 153,591, May 3.
Candlestick or the like. B. Ulvad. 153,650, May 3.
Cap or similar article, Bottle. F. M. Breen. 153,583, May 3.
Car body, Railway dining. R. W. Haman. 153,603, May 3.
Car body, Railway dining. F. L. Murphy and R. W. Haman. 153,618, May 3.
Case for a hearing aid amplifier unit. R. B. Bland. 153,576–7, May 3.
Caster and perfume holders, Combination. J. Duberstein. 153,589, May 3.
Clip or similar article, Pencil. F. Winter. 153,656, May 3.
Clock. S. E. Koplar. 153,611, May 3.
Clock. A. J. Nelson. 153,619, May 3.
Clothespin. J. Stanley, Sr., and J. Stanley, Jr. 153,644, May 3.
Container, Bill. W. E. Hilby. 153,606–7, May 3.
Container, Display. J. O. Reinecke. 153,636, May 3.
Corner unit, Insulating siding. R. D. Bordeaux. 153,579–82, May 3.
Crib toy or the like. E. Szantay. 153,647, May 3.
Cross. J. J. Gresh. 153,601, May 3.
Desk unit, Combination. E. H. Reiss. 153,637, May 3.
Dress. R. Trigere. 153,649, May 3.
Earring. L. D. Kline. 153,610, May 3.
Earring or similar article. A. Philippe. 153,628, May 3.
Fabric, Knitted. M. Sidore. 153,641, May 3.
Fabric, Pleated. R. J. Nelson. 153,620, May 3.
Fabric, Textile. S. Weinberg. 153,653, May 3.

Fish lure. A. Dolak. 153,587, May 3.
Fixture, Double cove lighting. I. G. Gangbin. 153,598, May 3.
Fixture, Lighting. I. G. Gangbin. 153,597, May 3.
Frame, Handbag. A. J. Fleres. 153,594, May 3.
Frame, Sunglass. J. R. Watkins. 153,652, May 3.
Game board, Educational. S. A. Patterson. 153,621, May 3.
Gauge, Portable pneumatic. F. L. Rupley. 153,639, May 3.
Grille guard, Automobile. F. J. Faulhaber. 153,593, May 3.
Holder and container or similar article, Combination dental floss. P. Keane. 153,609, May 3.
Juicer, Electric fruit. H. L. Stiles. 153,645, May 3.
Lamp base, Floor. I. I. Gotliffe. 153,599, May 3.
Lamp, Electric table. D. Hewitt. 153,605, May 3.
Lamp, Transparent prism vanity. E. L. Culwell. 153,585, May 3.
Lighter, Table. A. F. Reilly. 153,631–5, May 6.
Molding machine or the like. G. S. Bohannon. 153,578, May 3.
Mowing machine. K. E. Hileman. 153,608, May 3.
Ornament, Christmas tree. R. J. Silverman. 153,642, May 3.
Oven. W. Fader. 153,592, May 3.
Pen, Fountain. J. A. Snodgrass. 153,643, May 3.
Pressure gauge and relief valve or similar article, Combined. R. D. Waite. 153,651, May 3.
Rain hood or similar article. W. J. Peters. 153,623, May 3.
Scooter, Child's. R. H. Arbib. 153,575, May 3.
Screen building for an outdoor theatre. S. H. Taylor, Jr. 153,648, May 3.
Shoe. S. Litvack. 153,613, May 3.
Sign, Retractable. J. J. Hammer. 153,604, May 3.
Spinning aerial cargo toy. D. W. Main. 153,614, May 3.
Spoon or similar article of tableware. N. J. Mercer. 153,615–17, May 3.
Sprinkler, Lawn. O. A. Langos. 153,612, May 3.
Telephone, Marine radio. G. W. Florian. 153,595, May 3.
Tractor, Power driven. E. H. Remde. 153,638, May 3.
Trim for a window or the like, Overhead. L. Drnevich. 153,588, May 3.
Viewer, Slide. P. H. Halbriter. 153,602, May 3.
Wagon, Utility. A. H. Wende. 153,654, May 3.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 3D DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Accumulator shell sealing plug. J. Mercier and E. M. Greer. 2,469,171, May 3.
Acetal resins. D. E. Adelson and H. F. Gray, Jr. 2,469,288, May 3.
Aconitic acid from sugar-cane, Extraction of. E. K. Ventre. 2,469,090, May 3.
Actuator device, Unitary mechanical. W. P. Lear. 2,469,269, May 3.
Acylation of aromatic alkoxy compounds. A. I. Kosak and H. D. Hartough. 2,468,762, May 3.
Adducts of unsaturated acids with cyclic polymers of hexadienes and their production and utilisation. R. C. Morris and J. L. Van Winkle. 2,468,769, May 3.
Adhesive compress. E. M. Campbell. 2,469,064, May 3.
Adjustable automobile seat. L. B. Rivard and R. J. McCarthy. 2,469,243, May 3.
Adjustable bed frame. A. Lorens. 2,468,765, May 3.
Aerodynamic impelling device. J. S. Sharpe. 2,468,787, May 3.
Air conditioner. W. E. Burgess. 2,469,259, May 3.
Air conditioning. S. W. E. Andersson. 2,469,142, May 3.
Aircraft landing gear. E. E. Sulter. 2,468,790, May 3.
Airplane and helicopter sustained aircraft. H. T. Avery. 2,468,913, May 3.
Airplane wing. R. A. La Pointe. 2,468,888, May 3.
Alarm and protector. P. La Porta. 2,468,829, May 3.
Alarm system, Abnormal temperature and ground detector. E. J. Poitras. 2,469,001, May 3.
Alarm system, Telephone. R. A. Sears. 2,469,278, May 3.
Alkyl esters of α-acyl, α-acylamino, β(3-indole)-propionic acid. N. F. Albertson, S. Archer, and C. M. Suter. 2,468,912, May 3.
Alkylation of hydrocarbons. C. M. Thacker. 2,468,899, May 3.
Alumina, Producing. J. F. Thompson. 2,469,088, May 3.
Aluminum soaps and certain classes of useful compositions containing aluminum soaps, Preparing. N. L. Jones. 2,469,041, May 3.
Amine salt composition, Fatty acid. C. W. Hoerr. 2,468,755, May 3.
Amusement device, Airplane. A. Orance. 2,468,893, May 3.
Amyl alcohols, Dehydrating. P. A. Laurent. 2,468,764, May 3.
Anchorage. E. A. Black. 2,468,729, May 3.
Antenna system, Single-ended. M. W. Scheldorf. 2,469,209, May 3.
Apparatus for conducting reactions in the presence of a solid material. J. A. Crowley, Jr. 2,469 329, May 3.
Apparatus for electrically testing and classifying resistors. D. E. Sunstein. 2,468,843, May 3.
Apparatus for feeding liquid or gaseous materials, Automatic. E. E. Harper. 2,469,230, May 3.
Apparatus for full fusion welding of rails. E. F. Begtrup. 2,469,062, May 3.
Apparatus for high evacuation. E. F. Shelby. 2,469,006, May 3.
Apparatus for preparing bungs of ceramic ware for firing. R. B. Gould. 2,469,229, May 3.
Apparatus for producing hollow rubber articles. D. C. Kempthorn. 2,468,760, May 3.
Apparatus for progressively enameling continuous metal sheeting. W. G. Martin. 2,469,123, May 3.
Apparatus for refinishing tampico rolls and brushes. O. A. Widerberg and W. A. Wallaten. 2,469,095, May 3.
Apparatus for setting finishing compositions. R. A. Liebel. 2,469,270, May 3.
Apparatus for small fishing craft, Portable propelling. A. Montalbano. 2,468,889, May 3.
Apparatus for treating crude oil vapors. A. V. B. Candler. 2,468,958, May 3.
Apparatus for tree culture, Moisture measuring and calibrating. R. J. Hagerty. 2,468,972, May 3.
Apparatus for use in making precoiled helical fins. E. Broegger. 2,469,223, May 3.
Apparel-hanger cabinet. M. Ascherl. 2,469,148, May 3.
Apparel, Head. E. McCaffrey. 2,468,937, May 3.
Appliance, Body resting. A. W. Schenker. 2,469,084, May 3.
Arc discharge device. C. G. Smith. 2,468,788, May 3.
Arc welding, Gas blanketed. F. M. Drake. 2,468,808, May 3.
Arrangement for the salting and hooking of fish (herring). S. A. Rarstad. 2,469,026, May 3.
Attachment for tractors, Power. P. J. Slater. 2,469,181, May 3.
Automatic tack dispenser. E. Kozachuk. 2,469,233, May 3.
Automobile body construction. S. W. Ford. 2,469,068, May 3.
Auxiliary air heater. M. E. Yeager and A. J. Cnossen. 2,469,009, May 3.
Back tension drive. J. D. Rosebrough. 2,469,004, May 3.
Bait, Fish. W. P. Horton. 2,468,877, May 3.
Bail insert, Bowling. C. W. Jerome. 2,469,268, May 3.
Bather, Baby. R. W. Faulhaber. 2,468,742, May 3.
Belt, Transmission. L. H. Shingle. 2,468,898, May 3.
Bench, Automobile door repair. R. Bremer. 2,469,151, May 3.
β-lactones, Preparing. H. J. Hegemeyer, Jr. 2,469,110, May 3.
Bicycle stand. A. J. Landry. 2,468,763, May 3.
Bicycle trailer coupling. W. R. Peek. 2,468,894, May 3.
Binding means for loose leaves. H. Li Castri. 2,469,168, May 3.
Bis-phenols, Preparation of. J. E. Jansen. 2,468,982, May 3.
Block: *See*—
Garment sleeve block.
Blowpipe machine, Circle cutting. W. R. Helwig. 2,469,112, May 3.
Blowing in blast furnaces. W. W. Durfee and J. P. Foley. 2,468,738, May 3.
Bobbin check for weft replenishing looms. R. G. Turner. 2,469,089, May 3.
Bobbin, Yarn. L. A. Carlson. 2,469,103, May 3.
Boiler: *See*—
Sectional boiler.
Bolt device, Blind. K. E. Zeidler. 2,469,349, May 3.
Bottle attachment. J. Rifen. 2,468,780, May 3.
Bowling apparatus, Miniature. S. L. Long. 2,469,236, Mar. 3.
Box: *See*—
Folded box.
Bracket device, Hanger. W. J. Miller. 2,468,992, May 3.
Brad. C. B. Goodstein. 2,468,821, May 3.
Braiding machine. H. Loader. 2,469,047, May 3.
Brake beam. F. Schaefer. 2,469,083, May 3.
Brake lever operated switch. R. A. Kropp. 2,469,120, May 3.
Breathing apparatus. J. H. Emerson. 2,468,741, May 3.
Bridge for stringed musical instruments, Vibratory. R. W. Watts. 2,469,091, May 3.
Bridle, Bitless. R. E. Lawe. 2,469,046, May 3.
Broaching cutter. J. C. Garand. 2,468,745, May 3.
Brush for vacuum cleaners, Dusting. A. L. Brakman. 2,469,256, May 3.
Bubble composition. J. R. La Vietes. 2,469,045, May 3.
Buffer, Hydraulic. E. F. Rossman. 2,469,275, May 3.
Bunk, Stake. W. G. White. 2,469,093, May 3.
Burner: *See*—
Gun type burner. Tray type fuel oil burner.
Oil burner.
Pressure atomizing oil burner.
Bus, Electrical. B. E. McArthur, D. I. Bohn, and R. N. Wagner. 2,469,073, May 3.
Cabinet: *See*—
Apparel-hanger cabinet. Sectional radio cabinet.
Cabinet having an air-pump circuit, Refrigerating. F. N. James. 2,468,932, May 3.
Cable for power transmission, Square section. J. F. Salvans. 2,469,178, May 3.
Calculator and recorder, Train performance. S. V. Smith. 2,469,011, May 3.
Calendar having a pocketed backing member, Foldable leaf memoranda. P. E. Raffner. 2,469,177, May 3.
Camera control for bombardment aircraft. H. P. Roganti. 2,468,781, May 3.
Camera with detachable magazine, Roll film. A. Simmon and L. L. Weisglass. 2,469,008, May 3.
Can body making machine. J. F. Peters. 2,468,777, May 3.
Candleholder. C. D. Gilmore. 2,469,163, May 3.
Cap turning means, Closure. W. B. Johnson. 2,468,757, May 3.
Car wheel construction for resisting the transmission of vibrations. E. B. Hudson. 2,468,931, May 3.
Carbon bisulfide, Production of. C. R. Wagner. 2,468,904, May 3.
Carrier: *See*—
Collapsible luggage carrier.
Case: *See*—
Key case.
Case and atomizer, Vanity. S. Hutt and R. H. Symonds. 2,469,267, May 3.
Casein, Purifying. R. J. Block and H. W. Howard. 2,468,730, May 3.
Catalyst for cracking hydrocarbons. L. B. Ryland and M. Tamele. 2,469,314, May 3.

Catalytic alkylation. G. C. Johnson and B. W. Rope. 2,469,335, May 3.
Cathode structure, Slotted. B. J. Butler. 2,468,736, May 3.
Cellulose derivative compositions. A. E. Young and E. K. Stilbert. 2,469,348, May 3.
Cellulose ester material with acid and direct dyes, Printing. C. F. Miller. 2,468,940, May 3.
Centering means for railway draft devices. E. P. Kinne and F. H. Kayler. 2,469,118, May 3.
Chair: *See*—
Power operated chair.
Chemical process. R. Johnson. 2,468,759, May 3.
Chest protector. S. Siegel. 2,468,841, May 3.
Chloral alcoholate, Production of. W. Bridge and J. Matchet. 2,468,861, May 3.
Chlorine from hydrogen chloride. F. S. Low. 2,468,766, May 3.
Christmas tree holder. R. A. Wuerl and R. C. Watkins. 2,469,286, May 3.
Chuck. W. G. Sherman. 2,468,946, May 3.
Chuck. D. Stålhandske. 2,469,014, May 3.
Chuck, Air. R. E. La Pointe. 2,469,198, May 3.
Circuit: *See*—
Electronic counter circuit. Voltage regulator tube circuit.
Plural function circuit.
Reactance tube circuit.
Circuit breaker, Electrical. J. F. O'Brien and J. B. Cataldo. 2,468,774, May 3.
Circuit interrupter. J. M. Wallace, H. L. Rawlins, J. M. Cummings, and W. S. Aspey. 2,468,852, May 3.
Circuit interrupters, Reclosing. J. M. Wallace. 2,468,851, May 3.
Circuit tuner. J. G. Beard and R. F. Dressler. 2,469,324, May 3.
Clamp. E. M. Houseplan. 2,468,823, May 3.
Clamping apparatus, Collar. H. D. Forse. 2,469,226, May 3.
Cleaner: *See*—
Ingot mold cleaner.
Cleaning assembly, Teeth. F. B. Cooper. 2,469,261, May 3.
Cleaning device, Pneumatic. T. P. Kleyn. 2,468,934, May 3.
Cleaning unit, Teeth. M. Boulicault. 2,468,732–3, May 3.
Clipper, Pneumatic. P. J. Slater. 2,469,182, May 3.
Clothes drier. J. B. Nelser. 2,468,891, May 3.
Clothes-drying rack. J. G. Rothrock. 2,469,208, May 3.
Coating compositions embodying polyvinyl butyral resins and making same. D. R. Swan. 2,469,320, May 3.
Coating compositions, Wire. W. E. Boak. 2,469,150, May 3.
Coil induction heating, Method of and apparatus for dual. A. G. Wood and J. T. Vaughan. 2,468,796, May 3.
Collapsible luggage carrier. E. Pohl. 2,469,242, May 3.
Collector, Refuse. A. T. C. Dear. 2,469,033, May 3.
Combined condiment container. M. A. Garris. 2,469,034, May 3.
Communication system. W. R. Aiken. 2,468,911, May 3.
Compensated thermal motor. R. G. Olson. 2,468,906, May 3.
Composition of matter comprising carbon black and alkyl thiazyl disulfides. A. L. Hollis. 2,468,978, May 3.
Compressor, Centrifugal. S. A. Shuler, Jr. 2,469,214, May 3.
Compressor for high stage pressures, Centrifugal. C. Meisser. 2,469,125, May 3.
Compressor having means for separating gaseous refrigerant from foam, Reciprocating. D. F. Shepherd. 2,469,088, May 3.
Computer for determining the correct proportions of ingredients for a selected mixture. R. W. Walker and W. G. Jamieson. 2,469,022, May 3.
Concrete, mix therefor, and making, Refractory. A. F. Ruedi. 2,469,081, May 3.
Conductivity control. E. C. Thomson. 2,468,791, May 3.
Connecting coaxial cables. H. C. Schwartz. 2,468,783, May 3.
Connector: *See*—
Screwed sleeve electrical connector.
Connector for flexible electrical conduits, Box. W. R. Woodring. 2,468,854, May 3.
Container: *See*—
Combined condiment container.
Container for postage stamps, Pocket. V. Duchin. 2,468,817, May 3.
Container liquid level indicator. H. P. Murphy. 2,468,833, May 3.
Control and signal device, Altitude responsive. J. D. Sasser. 2,468,945, May 3.
Control apparatus for switches and the like. E. F. Kobl. 2,469,337, May 3.
Control apparatus for tuners. E. J. Mastney and J. H. Williams. 2,469,170, May 3.
Control of fibers, Electrostatic. E. S. Kennedy and F. C. Wedler. 2,468,827, May 3.
Control system. J. H. Booth. 2,468,917, May 3.
Converter, Crystal rectifier. J. B. Atwood and B. Trevor. 2,469,222, May 3.
Cooking equipment. C. C. H. Rasmussen. 2,468,778, May 3.
Coolant relief valve. J. E. Eshbaugh. 2,469,195, May 3.
Cooling projected devices. R. H. Goddard. 2,468,820, May 3.
Core assembly and method, Electromagnetic. W. C. Sealey and F. W. Arend. 2,468,786, May 3.
Core, Laminated magnetic. O. E. Andrus. 2,469,100, May 3.
Corner wall lamp. J. Lerman. 2,469,072, May 3.
Corrected means for removing beetroot tops, Automatically. J. Moreau. 2,468,994, May 3.
Correction device for electron lenses. J. Hillier. 2,469,165, May 3.
Corrosive action of Friedel-Crafts type catalysts, Reduction of. G. H. Miller. 2,468,831, May 3.
Coupling: *See*—
Bicycle trailer coupling. Locked coupling.
Detachable coupling.
Coupling device, Snap action. F. J. Trainor. 2,468,847–8, May 3.
Coupling for tractors and semitrailers. C. G. Seyferth. 2,469,279, May 3.
Covering, Lady's head. A. van Schrenk. 2,469,250, May 3.
Current supply apparatus. J. A. Potter. 2,469,176, May 3.
Curve reading apparatus, Spectrophotometric. G. B. Reimann. 2,469,129, May 3.
Cushioning and vibration damping support. L. F. Thiry. 2,468,901, May 3.
Cutter: *See*—
Broaching cutter.
Cutter and feeder assembly for harvesters, Adjustable. K. O. Peterson. 2,469,241, May 3.
Cutter assembly for rotary plows. L. I. Patterson. 2,468,776, May 3.
Cutting and/or marking apparatus. J. E. Hatfield. 2,469,299, May 3.
Cutting machine, Key. H. Belsser. 2,469,027, May 3.
Cutting tip, Multipiece. H. G. Hughey. 2,468,824, May 3.
Damper, Vibration. J. C. Little. 2,469,167, May 3.
Degreasing device. M. Jaffa. 2,469,040, May 3.
Denture, Removable. R. J. Maniola. 2,469,339, May 3.
Derivatives of cholesterol, Preparation of. A. E. Bide, R. J. Nicholls, and P. A. Wilkinson. 2,468,850, May 3.
Derrick mover. C. Swarts. 2,469,087, May 3.
Desk structure. W. E. Nordmark. 2,469,239, May 3.
Detachable coupling. F. J. Trainor. 2,468,849, May 3.
Detecting and locating system, Object. W. W. Hansen and R. H. Varian. 2,468,751, May 3.
Detecting wear on bits. J. B. Warren, Jr. 2,468,905, May 3.
Device for compounding mixed drinks. G. P. Le Moyne. 2,468,987, May 3.
Device for dispensing matches. S. E. Rabe. 2,469,052, May 3.
Device for indicating the sum of the intensity and duration of sound. R. W. Stanmyre. 2,469,282, May 3.
Device for proportioning liquid mixtures. J. S. Maltese. 2,469,305, May 3.
Die, Bottle capping. A. H. Bedworth and L. G. Curtis. 2,469,191, May 3.
Digger and loader, Power. O. B. Warnock and R. Benner. 2,469,187, May 3.
Discharge device, Hollow resonator. A. F. Pearce. 2,469,240, May 3.
Discharge wave generator. D. L. Hings. 2,468,754, May 3.
Disk magazine, Gravity fed. G. M. Stopper. 2,469,016, May 3.
Dispenser: *See*—
Automatic tack dispenser.
Dispensing apparatus, Article. B. W. Fry. 2,468,819, May 3.
Dispensing device, Beverage. B. G. Copping. 2,469,327, May 3.
Disposal apparatus, Waste. J. H. Powers. 2,469,205, May 3.
Distilling head. A. W. Goldsbarry and H. S. Martin. 2,468,872, May 3.
Dithiazyl disulfide, Preparation of. A. J. Beber. 2,468,952, May 3.
Dolsynolic acids and intermediates therefor, Separting. K. Miescher and R. Rometsch. 2,469,173, May 3.
Dolly for railway cars, vehicles and other objects. E. B. Kelley and H. B. Davis. 2,469,042, May 3.
Door: *See*—
Mine trap door.
Door latch. A. P. Mikkelsen. 2,469,201, May 3.
Door operating mechanism for dump cars. A. E. Zimmer. 2,469,220, May 3.
Door sealing system, Inflatable. W. G. Ross. 2,469,131, May 3.
Doorstop, Magnetic. J. O. Galey. 2,468,969, May 3.
Double-walled body for hot gases or vapors under superatmospheric pressure. E. Villiger. 2,468,902, May 3.
Draft control. Range. R. C. Lang. 2,469,121, May 3.
Drier: *See*—
Clothes drier. Rotary drier.
Drinking tube holder. C. B. Cornwell. 2,469,292, May 3.
Drive for motor vehicles, Hydraulic. H. A. Kopp. 2,468,828, May 3.
Drive unit for floor treating machines. W. E. and W. R. Holt. 2,468,929, May 3.
Driving mechanism, Belt. S. T. and F. L. Farrell. 2,469,296, May 3.
Dry-air pump. C. R. Cox. 2,469,328, May 3.

Ear trumpet, including adjustable sections. S. B. Bankson. 2,469,254, May 3.
Electric motor. K. Conrad and J. W. Hackett. 2,469,104, May 3.
Electric switch. A. Palme and O. P. McCarty. 2,469,263, May 3.
Electrical switch. C. Rein. 2,469,274, May 3.
Electrically heated gliding tool. E. A. Ekstrom. 2,468,965, May 3.
Electromechanical device for governing predetermined changes of positions. R. Gourdon. 2,469,035, May 3.
Electron tube. W. W. Eitel and J. A. McCullough. 2,469,331, May 3.
Electronic counter circuit. A. E. Canfora. 2,469,081, May 3.
Embossed articles, Production of ornamented. G. W. Borkland. 2,468,731, May 3.
Engine: *See*—
Inverted V-type engine.
Enrichening device. A. W. Orr, Jr. 2,468,941, May 3.
Envelope. E. R. White. 2,469,251, May 3.
Esters of beta-thiodipropionic acid, Preparation of long-chain. W. F. Gresham and M. F. Gribbins. 2,468,725, May 3.
Evaluating paper toweling or the like. J. Sobota. 2,469,013, May 3.
Eye-testing device, Plural target. I. Bennett, J. Venger, and G. C. Waddell. 2,468,953, May 3.
Fan type heater. C. A. Lindberg and H. W. Eckles. 2,469,234, May 3.
Farm gate. H. K. Tabler. 2,469,019, May 3.
Fatigue-testing machine. M. Watter. 2,469,346, May 3.
Feed device for paper sheets, Bottom. R. C. Sporleder. 2,468,842, May 3.
Feeder for hat formers, Auxiliary. H. F. Fitch. 2,469,161, May 3.
Fence post, Electric. R. M. Wilson and G. F. Phillipps. 2,468,907, May 3.
Fender door lock. H. M. Steele. 2,469,283, May 3.
Fibers and yarns, Preparing. R. E. Montonna, L. H. Reyerson, and E. Amdur. 2,468,771, May 3.
Film reel construction. W. P. Lloyd. 2,468,767, May 3.
Filter and cooler, Oil. W. S. Collier. 2,468,866, May 3.
Filtering apparatus. A. Rey. 2,468,838, May 3.
Filtering element, Fluid. S. W. Briggs. 2,468,862, May 3.
Filtration. H. O. Davidson. 2,469,293, May 3.
Fire alarm, Smoke actuated. W. J. Else. 2,468,740, May 3.
Fire alarm switch. J. W. Albrecht. 2,469,024, May 3.
Fish lure. G. B. Lobdell. 2,468,988, May 3.
Fitting for wire structures. A. E. Brickman. 2,469,257, May 3.
Fixture, Curtain or drapery. A. A. Allen. 2,469,098, May 3.
Fixture, Electrical connecting. T. M. Davis. 2,468,737, May 3.
Fixture for flame cutting machines, Torch controlling. J. McLauchlan. 2,468,938, May 3.
Fixture, Work holder. J. Wicker. 2,469,094, May 3.
Flare. S. Winters. 2,468,795, May 3.
Flash bider for machine guns. E. Garrett. 2,468,926, May 3.
Flowing wells. O. E. Dempsey. 2,469,225, May 3.
Fluid for hydraulic brake systems, Flushing. C. M. White. 2,469,284, May 3.
Fluid, Hydraulic pressure transmitting. C. M. White. 2,469,285, May 3.
Fluids and using same, Drilling. C. R. Wagner and W. N. Axe. 2,468,792, May 3.
Focusing means for autofocus enlargers, Manual fine. A. Simmon. 2,469,009, May 3.
Foldable vehicle. J. J. and W. J. Banassak. 2,468,914, May 3.
Folded box. B. H. Barter. 2,468,951, May 3.
Folder, Multisectioned. L. Hambrock. 2,468,973, May 3.
Folding device for shipping cartons, Tow. T. L. Nash. 2,468,834, May 3.
Food composition, Packaged. S. L. Galvin. 2,468,744, May 3.
Fractions of highly branched paraffins, Preparation of odorless. H. R. Legatski and C. C. Crawford. 2,468,986, May 3.
Frame: *See*—
Adjustable bed frame.
Frequency modulation. J. G. Beard and L. W. Born. 2,469,289, May 3.
Frequency reducer. H. M. Huge. 2,468,878, May 3.
Friction element for brakes. J. G. Oetzel. 2,469,127, May 3.
Fuel supply for opposed cylinder engines. E. C. Kiekhaefer. 2,469,117, May 3.
Fuels by the catalytic isomerization of high boiling paraffine, Production of improved Diesel engine. B. S. Greensfelder and R. J. Moore. 2,468,746, May 3.
Game device. R. E. Sullivan. 2,469,058, May 3.
Garment sleeve block. E. H. McKeehan. 2,469,306, May 3.
Garment, Transitory. L. M. Kelleher. 2,469,302, May 3.
Gas turbine apparatus. J. S. Newton. 2,469,238, May 3.
Gate: *See*—
Farm gate.
Gauge: *See*—
Height gauge. Radial clearance gauge.
Gear: *See*—
Aircraft landing gear. Toy gear.
Gear for aircraft, Landing. F. N. Dickerman. 2,469,106, May 3.
Gear mechanism, Eccentric drive. S. Rsepela. 2,469,313, May 3.
Gear or wheel puller. C. R. Gilbertson. 2,468,970, May 3.
Generation and modulation of alternating current signals. E. A. Goldberg. 2,469,264, May 3.
Generator: *See*—
Discharge wave generator.
Pulse-modulated wave-signal generator.
Girt, Supporting. G. W. O'Keefe. 2,468,892, May 3.
Glass of very rapid fusion and high point of transformation. A. Dansin and E. Despois. 2,468,868, May 3.
Golf practice device. F. L. Johnston. 2,469,301, May 3.
Golf practice device. S. Quattrin. 2,469,002, May 3.
Governor for motors, Centrifugal. V. C. Kennedy. 2,469,043, May 3.
Grating and making same, Open floor. G. G. Greulich. 2,469,070, May 3.
Grille, Tractor radiator. H. L. Brock and C. F. Kramer. 2,468,809, May 3.
Guanidine phosphates, Preparation of. J. S. Mackay. 2,469,338, May 3.
Guard and deflector for outboard motors, Propeller. R. W. Moore. 2,468,890, May 3.
Guide and power control for electric furnaces, Stock. H. A. Strickland, Jr. 2,468,789, May 3.
Guide, Strip. G. R. Markle. 2,469,169, May 3.
Gun type burner. J. T. Stone. 2,469,136, May 3.
Haloalkylation of aromatic hydrocarbons. H. D. Hartough and P. K. Chung. 2,469,334, May 3.
Hand loom. J. A. Pecott. 2,469,128, May 3.
Handle for paint brushes and the like, Articulate. N. Myers. 2,469,050, May 3.
Hangers and suspending awnings on said bangers, Awning. R. D. Thomson. 2,469,020, May 3.
Heat distribution control. C. E. Markham. 2,468,830, May 3.
Heat-exchange unit. J. C. Shaw. 2,469,316, May 3.
Heat exchanger. J. C. Shaw. 2,469,315, May 3.
Heat exchanger, Plate type. J. F. Belaieff. 2,469,028, May 3.

Pressure operated switch.
Rotary switch.
Snap-action thermostatic switch.
Toggle actuated switch.
Welding electrode holder switch.

Switchboard system, Telephone. B. C. Groh. 2,468,749, May 3.
Switch device, Multiple limit. W. Mungall. 2,468,772, May 3.
Switch or like apparatus. E. F. Kohl. 2,469,336, May 3.
Synchronizing system for geared motors. E. C. Wahlberg. 2,469,140, May 3.
Table and desk for children, Combined. J. A. Alexander. 2,468,856, May 3.
Table top, Auxiliary. E. E. Czak. 2,468,962, May 3.
Tape holder. W. B. Smith. 2,469,247, May 3.
Tappet holding wrench. C. E. Johnson. 2,468,983, May 3.
Target, Ball. W. Barto. 2,469,061, May 3.
Target member, Wheel type. C. W. Howard. 2,468,979, May 3.
Tea and coffee service, Individual. P. O. Chaudron. 2,469,032, May 3.
Tetrachlorodifluoroethane, Making. J. D. Calfee and P. A. Florio. 2,469,290, May 3.
Thermocouple for coaxial conductors, Impedance matched. P. J. Ovrebo. 2,368,775, May 3.
Thermostat controlled means for maintaining dual temperature in motors. J. Z. Brubaker. 2,468,735, May 3.
Thiamine 2-ethylhexyl sulfate. W. Huber and W. R. Boehme. 2,468,930, May 3.
3-tetrahydrofuranone, Manufacture of. A. W. Johnson. 2,468,881, May 3.
Timer, Automatic. H. L. Abrahamse and J. E. Hewitt. 2,468,855, May 3.
Timer, Cycle. F. A. Pearson. 2,469,341, May 3.
Tire. W. J. Heyneman. 2,469,300, May 3.
Toggle actuated switch. N. H. Koertge. 2,469,119, May 3.
Tool: *See*—
Electrically heated gilding tool.
Torsion driven tool.
Self-sealing inner tube demonstration tool.
Tool with automatic feed device, Machine. A. Rickenmann. 2,469,077, May 3.
Torch, Fluid-cooled gas blanketed arc-welding. R. T. Breymeier. 2,468,804, May 3.
Torch, Fluid cooled gas blanketed arc-welding. H. T. Herbst. 2,468,805, May 3.
Torch, Water-cooled gas blanketed arc-welding. H. T. Herbst. 2,468,807, May 3.
Torch, Water-cooled gas blanketed arc-welding. F. J. Plita. 2,468,806, May 3.
Torsion driven tool. K. G. R. Hawkins. 2,468,874, May 3.
Toy airplane. E. W. Baggott. 2,469,144, May 3.
Toy gear. E. W. Fermer. 2,468,966, May 3.
Toy riding spur. C. E. Bowers. 2,468,915, May 3.
Tracing device. W. Begerow. 2,468,802, May 3.
Traction device. C. J. Lindenthaler. 2,469,235, May 3.
Trailer dolly. H. P. Brown. 2,469,152, May 3.
Transducer and switching system, Interchangeable magnetic. D. E. Ross and W. E. Stofer. 2,468,782, May 3.
Transducer having an irregular nonmagnetic gap, Magnetic. H. A. Howell. 2,469,269, May 3.
Transducer, Magnetostrictive. R. L. Peek, Jr. 2,468,837, May 3.
Transformer, Radio-frequency distribution. J. B. Gehman and A. H. Turner. 2,469,192, May 3.
Transmission, Hydraulic. A. Dunn and O. C. Elland. 2,466,964, May 3.
Transmission system. Negative feed-back. H. P. Thomas. 2,469,218, May 3.
Transmitter resistor device, Weatherproof. C. A. de Giera. 2,469,105, May 3.
Transmitting apparatus, Angular motion. A. P. Adamson. 2,469,190, May 3.
Transmitting apparatus for inductive carrier railway train communication systems. B. C. Van Glider. 2,469,138, May 3.
Trap for hydraulic shock absorbers, Sediment. E. F. Rossman. 2,469,276, May 3.
Tray, Ice cube. C. M. Follin. 2,469,067, May 3.
Tray type fuel oil burner. J. T. Stone. 2,469,135, May 3.
Treating fabrics and resulting product. F. H. Russell. 2,469,245, May 3.
Tree holder. C. A. Bonc. 2,469,192, May 3.
Tripod head, Pan-tilt. W. H. Bliss. 2,469,063, May 3.
Troweling machine. J. O. Huffman. 2,468,981, May 3.
Truck, Railway. D. S. Barrows. 2,469,323, May 3.
Truss. B. Chalk. 2,469,260, May 3.
Tube: *See*—
Electron tube.
Tube deflecting system, Cathode-ray. D. L. Plaistowe and R. P. Shipway. 2,469,051, May 3.
Tube for ionic valves for high-voltage static current converters, Anode. G. J. Persson. 2,468,836, May 3.
Tuning system, Loop-antenna. B. D. Loughlin. 2,469,168, May 3.
Unit for punch presses, Retainer-stripper. J. H. Parsons. 2,468,998, May 3.
Unitary chalk and eraser holder. P. R. Windhorst. 2,469,347, May 3.
Unloader, Compressor. W. P. Caine. 2,469,224, May 3.
Urea-formaldehyde composition, Thermosetting. D. E. Cordier. 2,469,157, May 3.
Utility stand. B. H. Kennedy. 2,469,232, May 3.
Valve: *See*—
Coolant relief valve.
Noncorrodible valve.
Vented cooker valve.
Valve device. J. S. Case. 2,468,960, May 3.
Valve for multicell inner tubes. L. E. Bonham. 2,468,954, May 3.
Valve-keeper remover and retriever, Electromagnetic. G. Steiptura. 2,469,056, May 3.
Valve mechanism for heat-exchange devices, Temperature-regulating. J. C. Shaw. 2,469,212, May 3.
Valve mechanism, Pressure responsive. A. H. Winkler. 2,469,038, May 3.
Variable capacity sliding vane pump. H. A. Wrenn. 2,469,067, May 3.
Variable delivery rotary pump. D. O. Brant. 2,468,734, May 3.
Vehicle: *See*—
Foldable vehicle.
Velocipede, Convertible. E. J. Jones. 2,468,933, May 3.
Vented cooker valve. P. C. Wilbur. 2,468,794, May 3.
Ventilator. W. C. Wilson. 2,469,096, May 3.
Vibrating device. J. A. Mas. 2,468,991, May 3.
Vibration indicator. E. C. Strong. 2,469,137, May 3.
Vibrator, Massage. L. H. Snyder. 2,468,949, May 3.
Vinyl acetate polymerization process. W. R. Cornthwaite and H. W. Bryant. 2,468,923, May 3.
Voltage regulation. D. E. Truckesss. 2,468,850, May 3.
Voltage regulator tube circuit. W. F. Scott. 2,469,280, May 3.
Warp tensioning device. N. S. Johnson and A. F. Sargent. 2,468,880, May 3.
Wave generating method and means, Electronic. R. M. Fraser. 2,469,227, May 3.
Wax-polyamide-pinene resin coating composition. K. W. Fries. 2,469,108, May 3.
Wax-polystyrene composition, Chlorinated. L. H. Dimpfl and W. E. Elwell. 2,469,107, May 3.
Web material, Abrasive. J. A. Williamson. 2,468,853, May 3.
Welded articles, Making composite. R. E. Duce. 2,468,816, May 3.
Welding electrode holder switch. S. M. Harvey. 2,468,873, May 3.
Wheel dressing mechanism, Grinding. S. P. Bruce. 2,468,921, May 3.
Wheel dressing mechanism, Pattern controlled grinding. F. A. Barnes. 2,469,255, May 3.
Wheel suspension, Independent front. G. D. Rowland and H. J. Morris. 2,469,244, May 3.
Windings and leads therefor, Electric. O. E. Andrus. 2,469,099, May 3.
Work stop for use with collets. L. R. Evans. 2,469,160, May 3.
Wrapper, Package. L. Peters. 2,469,204, May 3.
Wrench: *See*—
Internal expanding pipe wrench.
Tappet holding wrench.
Wrinkle composition containing synthetic rubber and conjugated double bonded oil, Uncooked. E. L. Lusces. 2,468,980, May 3.
X-ray tube cooling apparatus. W. J. Oosterkamp and A. W. Vingerhoets. 2,468,942, May 3.

CLASSIFICATION OF PATENTS

ISSUED MAY 3, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE SCOTT ET AL.

No. 5551. Decided February 1, 1949

[— F.2d —; 80 USPQ 523]

1. PATENTABILITY—PARTICULAR SUBJECT MATTER—METHOD OF TREATING VEGETABLES.
Certain claims for a process of canning vegetables which set forth the use of purified wash water in the canning of vegetables washed with it *Held* to represent a patentable improvement over the prior art.

2. SAME—SAME—SAME.
Certain claims drawn broadly to the use of purified vegetable wash water in the canning of vegetables, which claims fail to define appellants' invention in such a way as to bring out one of its principal advantages, *Held* that these claims do not sufficiently distinguish from the prior art to justify their allowance.

APPEAL from the Patent Office. Serial No. 475,984.

MODIFIED.

Semmes, Keegin, Beale & Semmes (*Harry H. Semmes, Lee M. Robinson* and *Curtis M. Clark* of counsel) for Scott et al.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all of the claims in appellants' application for a patent for an alleged invention relating to a method of treating vegetables.

Claims 1 and 11 are typical of the appealed claims. They read:

1. In the canning of vegetables the steps of washing vegetables, removing suspended impurities from the wash water, and introducing the purified water into cans with washed vegetables.

11. In the canning of vegetables the steps of washing the vegetables to remove surface impurities under conditions capable of removing a portion of the vitamin and mineral constituents from the vegetables into the wash water, passing the wash water through a filtering medium in the presence of a non-absorbing filter aid to remove the impurities therefrom while retaining the vitamin and mineral content of the water, and then introducing the so filtered wash water into cans with the washed vegetables.

The references relied on are: "Canning and Preserving of Food Products," by Duckwall, pages 353 and 354, vol. 1, 1905; Hanson, 1,756,549, April 29, 1930.

Appellants' alleged invention relates to the recovery of food values which are normally lost in the washing of vegetables prior to canning and consists in purifying the water used in such washing, by filtration or otherwise, and then introducing it into the cans with the washed vegetables.

The references disclose the purification, by filtering or otherwise, of the brine or other liquor which is to be used in canning vegetables.

It is conceded by counsel for appellants that the presence of food values in water which has been used for "blanching" vegetables was known but that "• • • the industry has always used artificially prepared brines for canning vegetables, the brines being fortified with vitamins, flavor components and other additives to replace in some degree the food values lost in the blanching process."

It may be said that it does not appear from the references that anyone has previously attempted to recover the food values contained in the washing water.

[1] It is stated in appellants' application that the washing water, after purification, has a pleasing flavor similar to that of the vegetables washed by it and that the use of such water in canning the vegetables gives them a stronger and better flavor than vegetables canned either with fresh water or ordinary canning brine. The process also results in the saving of food values which would otherwise be lost, and eliminates the problem of disposing of the washing water which, if merely discharged as waste, has a strong and unpleasant odor. In view of those advantages, we are of opinion that the use of purified washing water in the canning of the vegetables washed with it, or other vegetables of the same kind, represents a patentable improvement over the prior art relied on by the Patent Office tribunals and that, therefore, on the record presented, appealed claims 2, 3, 4, 5, 9, 10, 11, and 12 should be allowed.

[2] Appealed claims 1, 6, 7, and 8 are drawn broadly to the use of purified vegetable wash water in the canning of vegetables. Those claims are broad enough to cover the use of water which has been used in washing vegetables of one kind, in the canning of vegetables of an entirely different kind. Such a procedure would not ordinarily result in an improvement in flavor. Claims 1, 6, 7, and 8, therefore, fail to define appellants' invention in such a way as to bring out one of its principal advantages. We are of opinion, therefore, that those claims do not sufficiently distinguish from the prior art to justify their allowance.

For the reasons stated, the decision of the Board of Appeals is modified, being affirmed as to claims 1, 6, 7, and 8, and reversed as to claims 2, 3, 4, 5, 9, 10, 11, and 12.

MODIFIED.

Vol. 622 • No. 2 Tuesday, May 10, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, (including annual index, $21.00; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

U. S. Court of Customs and Patent Appeals

IN RE UDY

No. 5515. Decided March 1, 1949

[— F.2d —; 81 USPQ 104]

1. PATENTABILITY—COMBINING REFERENCES—ANALOGOUS ART.

Where appellant contends that the disclosure of one of the references and the instant application relate to non-analogous arts and therefore, the Board erred in combining the disclosures of the cited references in rejecting the appealed claims, *Held* that the rule is well established that in considering more than one reference, or a reference alleged not to be in the art involved, the question always is, does such art suggest doing the thing which the applicant has done?

2. SAME—COMPOSITION—CONSISTING ESSENTIALLY.

Where appellant contends that the limitation contained in all the claims as to the reaction mixture "consisting essentially" of three materials, distinguishes the claims from the disclosure of the reference patent, *Held* that there is no merit in that position in view of the fact that appellant's specification expressly provides that the composition "may" consist essentially of the three materials, and that those three materials are used exclusively in the disclosure of the reference patent.

3. SAME—PARTICULAR SUBJECT MATTER—EXOTHERMIC REACTION MIXTURE.

Certain claims for an exothermic reaction mixture and method of producing sound castings using such mixture *Held* properly rejected on the prior art.

APPEAL from the Patent Office. Serial No. 450,284.

AFFIRMED.

Clarence M. Fisher (*Pennie, Edmonds, Morton & Barrows* of counsel) for Udy.

W. W. Cochran (*Clarence W. Moore* of counsel) for the Commissioner of Patents.

O'CONNELL, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the action of the Primary Examiner in rejecting all the claims in appellant's application for a patent for alleged "improvements in metallurgy." Of such claims, 5 to 8, inclusive, are directed to an exothermic reaction mixture, and the remainder of the claims, 13 to 16, inclusive, are directed to a "method of producing sound metal castings."

The claims were rejected as unpatentable over the following cited prior art: Udy, 2,243,784, May 27, 1941; Francis et al., 2,294,169, August 25, 1942.

Claims 5 and 13 are considered sufficiently illustrative. They read:

5. An exothermic reaction mixture for use in providing slag layers on the surfaces of molten metals in casting molds and ingot molds to inhibit or reduce piping, consisting essentially of iron oxide, sodium nitrate and non-carbonaceous reducing material, the reducing material being present in the reaction mixture in amount sufficient to react with all of the sodium nitrate and to reduce a portion only of the iron of the iron oxide and the components of the reaction mixture being present in such quantities and being so proportioned as to be capable upon ignition of the reaction mixture of reacting exothermically to produce molten iron oxide-bearing slag.

13. The method of producing sound metal castings which comprises pouring molten metal into a suitable mold, contacting with an upper surface of molten metal within the mold an exothermic reaction mixture consisting essentially of iron oxide, sodium nitrate and non-carbonaceous reducing material, and thereby forming molten slag in contact with the molten metal, and maintaining the metal and slag in contact until the metal has solidified, the reducing material being present in the reaction mixture in amount sufficient to react with all of the sodium nitrate and to reduce a portion only of the iron of the iron oxide and the components of the reaction mixture being present in such quantities and being so proportioned as to be capable upon ignition of the reaction mixture of reacting exothermically to produce molten iron oxide-bearing slag.

Claims 6, 7, and 8 contain the same limitations as claim 5, with the respective exceptions that claim 6 defines the non-carbonaceous reducing material as comprising silicon; claim 7, as comprising aluminum; and claim 8, as ferrosilicon. Claims 14, 15, and 16, as correctly pointed out in appellant's brief, differ from claim 13 in the same manner, respectively, that claims 6, 7, and 8 differ from claim 5.

The subject matter of the claims relates to a composition and to a method for reducing piping during solidification of metal in a mold, such as iron and steel. A "pipe" is described in appellant's specification as a cavity formed in the interior of the metal during the process of casting which makes the portion of the casting containing the pipe defective and requiring that it be discarded at some time subsequent to casting. To inhibit or reduce piping, an exothermic reaction mixture is used by appellant in providing a slag which forms an insulating layer on the surface of the molten metal in the mold to prevent a too-rapid cooling of the metal as it solidifies.

The patent to Udy, which is appellant's own prior patent, relates to metallurgy and provides for metallurgical methods and materials. The patent discloses that an important object of the invention is to provide a method of altering the compositions of metal products containing iron; to provide exothermic mixtures suitable for use in the production of metallic iron; and to provide a method of producing metallic iron products suitable for use in the production of high-strength castings from metal.

In the production of the castings, the patentee Udy employs the principle of dilution of relatively impure metallic iron products with relatively pure metallic iron. The disclosure further contemplates the provision of methods and materials for increasing the temperatures of molten metal baths and for melting metals. In that connection, the following pertinent statements relative to the use of exothermic mixtures are set forth in the specification of the patent:

Reaction mixtures for incorporating iron or iron and silicon in molten metal baths may comprise silicon-containing material such as ferrosilicon, oxidizing material such as sodium nitrate or sodium chlorate, particles of metallic iron and lime, or iron oxide, or lime and iron oxide or calcium ferrite (calcium oxide chemically combined with ferric oxide). * * *

Where molten iron only is incorporated into the reaction mixture, the specification of the patent provides:

the silicon may be employed in a more limited amount such that only a portion of any iron oxide present will be reduced and the unreduced iron oxide will function to increase the fluidity of any slag produced.

In producing an exothermic mixture in accordance with the invention, I may employ one part by weight of silicon for oxidation to not less than about twenty (20) parts by weight of metal to be melted. * * *

The patent to Francis et al. relates to the manufacture of iron and steel castings, and accomplishes the same object which appellant in the present case had in view. The method of manufacture disclosed in the patent, however, shows the use of an exothermic mixture in forming the slag for the surface of the metal which differs from the exothermic mixture defined in the appealed claims. According to the disclosure of the patent, as soon as the metal has been cast in the usual manner to fill the hot sinkhead on the mold, the surface of the metal is covered immediately with a layer of thermite mixture containing aluminum powder, iron oxide and fluorspar.

The Examiner rejected claims 5 to 8, inclusive, on the ground that the precise composition defined in such claims is disclosed in the patent to Udy. They were further rejected by the Examiner, together with claims 13 to 16, inclusive, as being unpatentable over the disclosure of Francis et al. in view of Udy. Claims 13 to 16, inclusive, were further rejected by the Examiner as being unpatentable over Francis et al. in view of Udy. The Examiner summarized his grounds of rejection as follows:

1. Udy discloses the composition claimed by applicant and recites that a portion only of the iron oxide may be reduced to increase the fluidity of the slag.
2. Francis discloses an anti-piping process using an exothermic reaction slag producing mix and no invention would be involved in substituting the mix of Udy for the mix of Francis et al.
3. No invention is seen to reside in decreasing the reducing agent of Francis et al. so that a portion only of the iron oxide is reduced, especially since Udy teaches that this is a common expedient if a more fluid slag is desired.

The Board of Appeals agreed with the grounds of rejection stated by the Examiner and explained its reason for so doing. A petition for reconsideration was considered by the Board, and denied by it with respect to making any change in its original decision.

[1] Appellant contends that the disclosure of the patent to Udy and the instant application relate to non-analogous arts and, therefore, the disclosure of the patent to Udy is not a valid reference; that the respective compositions set forth in appellant's patent and in the instant application are different in essential aspects and are specifically compounded to perform different functions; and that the Board erred in combining the disclosures of the cited references in rejecting the appealed claims.

Appellant concedes in his brief that the patent to Francis et al. relates to analogous art, and the rule is well established that "In considering more than one reference, or a reference alleged not to be in the art involved, the question always is: does such art suggest doing the thing which the applicant has done?". *In re Fridolph*, 30 CCPA (Patents) 939, 942, 134 F.2d 414, 57 USPQ 122, 552 O. G. 561. It is our opinion that the cited references in the case at bar clearly suggest doing the thing that appellant has done.

The patent to Udy, as the Board correctly observed, "teaches the exclusive use of ferrosilicon, sodium nitrate and iron oxide as the composition, with the further proviso * * * that only a portion of the iron oxide is to be reduced," and that it was only a matter of choice to add other fluxing materials to the mix. The use of exothermic mixtures to incorporate iron or iron and silicon into molten metal, as hereinbefore set forth from the disclosure of the patent to Udy, include the three essential ingredients of the composition respectively defined by the claims on appeal.

As the Board noted, appellant's instant application is broadly expressed. It does recite the exact proportions of the components of the illustrative exothermic reaction mixture in the single example set forth in the application, but there is no expression therein that such proportions are critical, nor are those proportions referred to in any of the appealed claims.

Furthermore, as the patent to Udy discloses the same composition that is employed by appellant in his present application, and the patent to Francis et al. shows the same steps of the method of manufacturing castings from metal that is employed in the present application by appellant, there was no error in the decisions of the tribunals of the Patent Office in holding, for the reasons stated by them, that the claims were unpatentable over the disclosures of those two patents.

Appellant emphasizes the point that the references do not specify the function performed by the presence of the iron oxide in the molten slag. The Examiner presumed that the presence of the iron oxide was to increase the fluidity of the slag, and correctly pointed out that appellant "has not once mentioned the function of the presence of iron oxide either in the specification or amendments."

[2] Appellant raises the further point that the limitation contained in all the claims as to the exothermic reaction mixture "consisting essentially of iron oxide, sodium nitrate and non-carbonaceous reducing material," distinguishes the claims from the disclosure of the patent to Udy. There appears to be no merit in that position in view of the fact that appellant's specification expressly provides that the composition "may" consist essentially of the three materials, and that those three materials are used exclusively in the disclosure of the patent to Udy.

[3] Appellant's arguments have all been carefully considered but we are not convinced that the Board erred in its conclusion based upon the applicability of the prior art cited. In view of this conclusion, it is deemed unnecessary to discuss additional points which have been presented by counsel and the decision of the Board of Appeals is accordingly affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

NYSTROM ET AL. *v.* JANEWAY

No. 5540. Decided March 1, 1949

[— F.2d —; — USPQ —]

1. WORDS AND PHRASES—"SUBSTANTIAL MOVEMENT."

Where there is nothing in the record defining "substantial movement," *Held*, such expression of itself does not exclude all transverse movement.

2. INTERFERENCE—PRIORITY—RAILWAY TRUCK.

Held that the decision of the Board of Interference Examiners awarding to appellee priority of invention of the subject matter defined in a single count relating to a railway truck, is affirmed.

APPEAL from the Patent Office. Interference No. 81,706.

AFFIRMED.

George Heidman and *Rodney Bedell* (*Joseph H. Milans* of counsel) for Nystrom et al.

Robert E. Harris (*Francis D. Thomas* and *Harry W. F. Glemser* of counsel, for Janeway.

JACKSON, *J.*:

This is an appeal in an interference proceeding from a decision of the Board of Interference Examiners of the United States Patent Office awarding to appellee priority of invention of the subject matter defined in a single count reading as follows:

> In a railway truck, an axle and wheel, a journal box carried thereby, an equaliser supported upon the journal box and extending longitudinally of the truck, the equaliser and journal box being movable together vertically of the truck and being held against relative movement longitudinally of the truck, a load carrying truck frame spring-supported on the equaliser and free of association with the journal box except through the equaliser, and *an elongated anchor rod extending transversely of the truck and connected at its end portions to the equalizer and to the load carrying frame to hold the equaliser and load carrying frame against substantial movement relative to each other transversely of the truck* but accommodating their movement relative to each other in a vertical direction. [Italics ours.]

The italicized part of the count is said by appellants to indicate specifically the novel and essential feature of the truck defined by the interference count.

The invention here involves a four wheel truck which is positioned beneath each end of a railway car. The truck comprises two widely spaced axles to each end of which a car wheel is affixed; journal boxes near the wheels designed to support the ends of beams which extend from axle to axle longitudinally and are known as "equalizers"; supported by the equalizers with springs thereon is a frame supporting a beam which extends across the middle of the truck, called a "bolster." The body of the car is positioned on the two bolsters near the opposite ends of the car. There does not seem to be any dispute that the italicized portion of the count was designed for a structure, in addition to the elements of the truck above set out, to prevent substantial movement from side to side of parts of the truck, while the railroad car to which it has been affixed is in motion.

The interference involves a patent of appellants, Serial No. 2,350,567, dated June 6, 1944, on an application, Serial No. 410,354, filed September 11, 1941, relating to Railroad Car Trucks, and an application of appellee, Serial No. 496,998, filed August 2, 1943, relating to Railway Passenger Car Trucks. That application is a continuation-in-part of an application, Serial No. 425,273, filed January 1, 1942, relating to a Railway Vehicle Truck.

Both parties filed preliminary statements, and took testimony during the course of which many exhibits were received in evidence.

Appellants alleged in their preliminary statement that the first drawing of the device and first disclosure of the invention to others were made on or about November 1, 1940; reduction to practice on or about December 6, 1940, by inclusion of the truck in a railway car which operated successfully; first written description of the invention on or about January 20, 1941; and the exercise of reasonable diligence in adapting and perfecting the invention beginning on or about November 1, 1940.

The preliminary statement of appellee alleged that the first drawings of the invention, first written disclosure thereof, and disclosure of it to others were made on or about September 15, 1939; reduction to practice on or about October 31, 1939, by causing to be made a full-size device, which was successfully operated; and the exercise of reasonable diligence in adapting and perfecting the invention beginning about September 15, 1939.

The count, which is claim 3 of appellants' patent, was copied by appellee to provoke the interference. Appellee's right to make the claim was not questioned throughout the proceeding and is not directly questioned now.

The Board of Interference Examiners held that appellee had established a date of conception prior to November 1, 1940, which is the earliest date alleged in the preliminary statement of appellants. That holding was based upon an exhibit which is a blueprint made from a drawing dated July 8, 1940. The limitations of the count were applied by appellee to that exhibit and his testimony supported the count substantially, as disclosed in his application. The Board held that appellee had reduced the invention to practice as early as March 1941 by reason of evidence of successful road tests, wherein the device of appellee was incorporated in a railway car which was operated on the lines of the New York Central Railway from February 20 to March 27, 1941.

Appellants neither challenge the correctness of the dates which were awarded to appellee nor deny that tests were actually made by him on the dates shown in appellee's record. They contend that the tested truck of appellee does not correspond to the structure defined in the italicized portion of the count. The earliest date alleged by appellants for reduction to practice of their truck is not later than April 28, 1941.

It appears that appellants are connected with the Chicago, Milwaukee, St. Paul & Pacific Railroad, appellant Nystrom since 1922 and appellant Green since 1927. The former is the chief mechanical officer and the latter, who at one time was in the drafting department of the company, is assistant mechanical engineer. The railroad constructs and repairs in its own shops much of its rolling stock. Nystrom's duties related to the construction, maintenance, and proper operation of such stock, and he collaborated with Green in efforts to improve the riding qualities of railroad trucks.

Appellee is a research engineer employed by the Chrysler Corporation, having been in that capacity since 1931. At the time of the taking of his testimony, he was the head of the dynamics research department, engaged primarily in the development of railroad rolling stock.

It appears that both parties worked on the production of several trucks for railway cars. The first type of truck of appellee, testified to in the record, was identified by a code number, PA–2–M. That type was disclosed in a blueprint exhibit dated March 1939, and a photograph in evidence bearing a receiving date of October 13, 1939. Appellants did not contend that that type of truck supports the count, and the Board properly so held.

A second type of truck, which was never built, is identified by the code number, PA–3, and was illustrated in certain blueprints in evidence, the first of which, by stipulation, was accepted as made at least as early as the date stamped on the exhibit, December 28, 1939. It was also stipulated that a drawing from which the second blueprint was made was completed on January 16, 1940. In that type of truck four transverse straight elongated rods, comprising ball and flexible end connections, were provided to control relative movement between the equalizer at one end and the load support frame on the other.

A third truck, identified as PA–2–M2, was thereafter built. It comprised similar provisions to those shown in the exhibits concerning the PA–3 truck and similar straight elongated rods for the purpose of controlling relative transverse movement between equalizers and the load support frame. The blueprint in evidence, showing the structure of that truck, was stipulated to have been made from a drawing dated July 8, 1940.

In his oral testimony, appellee applied the terms of the count, which conformed to his specification, to the blueprint exhibit. The Board, in our opinion, properly held that appellee established a date of conception of the subject matter of the count prior to November 1, 1940, the earliest date available to appellants. It did not fix any definite date of conception to appellee but it appears to us that such date was at least as early as January 16, 1940, to which we referred in discussing truck type number PA–3.

The Board of Interference Examiners in its decision set out in detail the material evidence pertaining to the structure of the PA–2–M2 truck, but it is not necessary for us to repeat what was there said.

The truck, PA–2–M2, as hereinbefore mentioned, was subjected to road tests which were conducted from February 20 to March 27, 1941. The tests, which consisted in putting the truck in actual operation, were made on the New York Central Railroad between Albany and Utica. The car, to which the truck was affixed, had on its floor a glass panel through which the witnesses, highly skilled in the art, observed the operation of the truck and its component parts. The testimony of all of the witnesses and the test records in evidence show that in its operation, the truck was found to be very satisfactory with respect to limiting the relative movements of its parts and also to all of its lateral riding qualities; that no trouble with the lateral stabilizer had been experienced; and the truck was thoroughly inspected throughout the run and at the end thereof, and no mechanical defects were found in its construction.

Counsel for appellants argue vigorously concerning the meaning of "substantial movement" appearing in the count, but concede that, as far as this interference is concerned, the truck of appellee parallels that of appellants, except for the alleged relative lateral movement of the equalizers and load carrying frame. In the brief of appellants it is alleged that the device in the tested truck, the transverse elements of which were held by the Board to maintain the truck frame and equalizers against substantial relative movement transversely of the truck, do not meet the italicized portion of the quoted count in that the link connections allow a ⅜ inch to ½ inch lateral movement in opposite directions from a normal position, and that such connections, therefore, permit a possible total movement of 1¼ inches. Such movement is contended by appellants to be "substantial." Appellants, by this contention, appear to be indirectly questioning the right of appellee to make the count. This may not be done for the reason that they made no motion to dissolve the interference.

[1] We find nothing in the record defining "substantial movement." On the contrary, it is obvious that such expression of itself does not exclude all transverse movement. Some such movement would necessarily take place in the structure of appellants for their transverse anchor rod has at each end a rubber pre-compressed disc joint through which some lateral movement must take place with respect to vertical movement in the truck. While in a different setting, we think, what was said by this court in the case of *Robbins v. Wettlaufer*, 28 CCPA (Patents) 952, 81 F.2d 882, 28 USPQ 470, 468 O. G. 3, cited by the Board in its decision, has some application here. In that case we held that the term "substantially coincident with" or "close to" does not mean "coincident with" or "at."

The arrangment of the means holding the equalizer and the load carrying frame against substantial movement relative to each other transverse of the truck, differs in the trucks of the parties. Both such means, however, in our opinion, are, by their very nature, cushioning means. In other words, there must be some lateral movement, but its effect, as far as the car is concerned, is cushioned to provide for comfortable riding. As has been mentioned, the pre-compressed rubber washers at either end of appellant's anchor rod are the means said to obtain the desired result, whereas in the truck of appellee, there is a rubber connection in shear (reactive to torsion strain) at one end of his transverse link, and a ball on the other end which bring about an identical result.

When road conditions over which the truck passes produce lateral strain, the rubber means of appellee are put to a torque or twisted strain, while in the apparatus of appellants, the strain is opposed by

pre-compressed washers. That, however, in our opinion, does not render the truck structure of appellee different from the structure defined in the count.

It was contended below by counsel for appellants, and is contended here, that there is no visual proof of the existence of the transverse links in evidence. In dealing with that contention, the Board properly observed that the photographs in evidence were progress photographs showing "various stages of assembly" and that it was impossible to see the end of appellee's link at the point from which one photograph was taken. The Board, in view of the record, correctly stated that the transverse link of appellee's device corresponds to the limitation set out in italics in the quoted count and that it was present during the road tests. Since it is clear to us that a truck was constructed by appellee in accordance with all of the limitations of the count and was successfully tested between February 20 and March 27, 1941, we hold that the Board did not err in awarding reduction of the invention to practice to appellee as early as March 1941.

In view of what has been hereinbefore set out, it is unnecessary to discuss the record of appellants. They are bound by their earliest date of November 1, 1940, for conception of the invention. It appears from their record that the type of truck herein involved was completed by them by April 25, 1941, and that the truck was successfully reduced to practice not later than April 28, 1941. Since all of those dates are later than those awarded to appellee, they are clearly of no avail to appellants. Other questions of minor importance have been raised in the brief of appellants, and, while they have been given consideration, it is not necessary to discuss them.

[2] For the reasons hereinbefore set out, the decision of the Board of Interference Examiners is affirmed.

AFFIRMED.

Disclaimers

2,158,963.—*Martin J. Gossen*, Whitefish Bay, Wis. WEATHER STRIP AND SASH BALANCE. Patent dated May 16, 1939. Disclaimer filed Apr. 6, 1949, by the inventor.

Hereby enters this disclaimer to claims 1, 2, 3, 4, 7, and 8 of said patent.

2,403,234.—*John A. Patterson*, Beacon, N. Y. LUBRICANT. Patent dated July 2, 1946. Disclaimer filed Apr. 11, 1949, by the assignee, *The Texas Company*.

Hereby enters this disclaimer to claim 4 of said patent.

2,406,990.—*George C. Borden, Jr.*, and *Karl R. Karlson*, Easton, Pa. ANTIFUNGUS WRAPPER, ETC. Patent dated Sept. 3, 1946. Disclaimer filed Apr. 1, 1949, by the assignee, *Riegel Paper Corporation*.

Hereby enters this disclaimer to claims 1, 3, 4, and 5 of said patent.

2,423,526.—*Carl G. Sontheimer*, Haddonfield, and *Nathaniel I. Korman*, Camden, N. J. REFLECTOMETER FOR WAVEGUIDE TRANSMISSION LINES. Patent dated July 8, 1947. Disclaimer filed Mar. 30, 1949, by the assignee, *Radio Corporation of America*.

Hereby enters this disclaimer to claims 1, 2, 4, 5, and 6 except insofar as claim 2 is incorporated by reference in dependent claim 3 of said patent.

2,450,159.—*William M. Pickslay*, Milwaukee, Wis. CONTROL SYSTEM. Patent dated Sept. 28, 1948. Disclaimer filed Mar. 26, 1949, by the assignee, *Allis-Chalmers Manufacturing Company*.

Hereby enters this disclaimer to claim 27 of said patent.

Adjudicated Patents

(C. A. Ill.) Evans et al. Reissue Patent No. 22,660, for a method of and means for waving hair, *Held* invalid. *Sales Affiliates* v. *National Mineral Co.*, 172 F.2d 608; 80 USPQ 389.

(C. A. Ill.) Winkel Patent No. 2,051,063, for a hair waving unit, *Held* invalid. *Sales Affiliates* v. *National Mineral Co.*, 172 F.2d 608; 80 USPQ 389.

(D. C. N. J.) Montmarquet Patent No. 2,301,066, for an athletic supporter, *Held* invalid and not infringed. *Montmarquet* v. *Johnson & Johnson*, 82 F. Supp. 469; 80 USPQ 404.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,345,708. VISE. Patented Apr. 4, 1944. Vise has an adjustable normally folded mounting so that top horizontal section carrying a stationary jaw at one end and a slidable jaw may be adjusted to various inclined positions. Top section is hinged at one end to one end of an intermediate base, which in turn is hinged at one side to one side of a sub-base. When desired, top section may be adjusted endwise by raising one end, or sidewise by raising one side of intermediate base while sub-base remains stationarily secured to any suitable support. Removable props may be used to hold the adjustable parts at desired inclinations. (Owner) Arthur A. Lines, 2003 South George St., Marion, Ind. Group 33—92. Reg. No. 19,447.

Pat. 2,318,365. DENTAL AND MOUTH CLEANSING MEANS. Patented May 4, 1943. Tubular finger piece of sponge rubber for cleaning teeth may be discarded after a single use. It is closed at one end and impregnated with dentifrice. After formation of tube, it is rolled inside out upon itself into a substantially flat circular roll and placed upon a retaining ring. When desired, tube is readily unrolled from ring and simultaneously rolled upon a finger into position for immediate use. (Owner) Bigelow Boysen, 808 Haycock Road, Falls Church, Va. Groups 28—32; 30—51; 39—17; 40. Reg. No. 19,448.

Pat. 2,334,000. CAPSULE. Patented Nov. 16, 1943. Container for unit dose of liquid or semi-liquid. Bulbous capsule has a neck with a sealed mouth and separable lip extensions. The lips may be readily pulled apart to tear open the mouth to empty contents. (Owner) Bigelow Boysen, 808 Haycock Road, Falls Church, Va. Groups 28—31; 40. Reg. No. 19,449.

Pat. 2,370,973. METHOD AND APPARATUS FOR PRODUCING COATED WIRE. Patented Mar. 6, 1945. Reg. No. 19,450.

Pat. 2,445,675. APPARATUS FOR PRODUCING COATED WIRE BY CONTINUOUS PROCESS. Patented July 20, 1948. Reg. No. 19,451.

These two patents provide methods and apparatus for electroplating and drawing electroplated coatings on wire by continuous operation. A plurality of pipe sections are connected in end-to-end relation and insulated from each other. Drawing dies are interposed between certain intermediate sections and at the incoming and outgoing ends of the apparatus. The dies and pipe sections are connected to a suitable source of current. This arrangement provides a closed system consisting of a series of separate chambers through which the wire is continuously pulled to subject it to annealing, cleaning, pickling, electroplating, and drawing. As the wire is pulled through the system, it is drawn through the dies preceding and following the treating steps. Uniform current density is maintained on the wire throughout its travel through plating chambers by uniformly tapering pipe sections on their inner surface from their opposite ends inwardly toward a central point. Gaskets adjacent the dies provide a light wiping action on the wire to prevent dies from becoming coated. When desired, etching chambers may be interposed in the system. Several embodiments of the inventions are set forth. (Owner) W. C. Lang, 32605 Shoreham Drive, Willoughby, Ohio. Group 34—72.

Pat. 2,455,101. ROCKET PROJECTOR. Patented Nov. 30, 1948. Rocket projector has a projector tube with several communicating bores of different diameters. The largest is the ignition chamber from which channels lead to the outside. These channels discharge and permit exhausting of the propelling gases during firing and prevent back blasts toward the operator. The firing mechanism is in the bore behind the ignition chamber. This consists of a block with several intercommunicating bores. A coiled spring in the rear of the block presses upon a disk from which a firing pin projects. This bore communicates with a cap chamber. When the trigger is pressed, the firing pin slides forward under pressure of the spring and pierces the cap igniting the rocket charge. (Owner) Douglas F. Stevens, 1096 North Raymond Ave., Pasadena, Calif. Group 33—X9. Reg. No. 19,452.

Pat. 2,457,464. SURGICAL INSTRUMENT. Patented Dec. 28, 1948. A surgical instrument having a controlled retractable needle for clinical or home use in treating blisters, small infections, etc., without undue injury to the skin. The handle of the device has an interiorly threaded barrel member operatively associated with an exteriorly threaded cylinder. A member rotatably mounted on the barrel has a portion extending within the cylinder to rotate the cylinder and extend or retract a needle at end of cylinder. A bifurcated curved guard secured to end of barrel member controls the depth of penetration of the needle. (Co-owner) Leo L. Grose, Box 140, Attica, N. Y. Group 39—15. Reg. No. 19,453.

Pat. 2,452,096. COMBINED BILLFOLD AND CARD RETAINER. Patented Oct. 26, 1948. Billfold, which is slightly more than twice the width of a piece of paper money, has outer and inner walls fastened together at ends and stitched together along a line intermediate the longitudinal edges, forming two separate compartments for paper money accessible at top and bottom edges of billfold. A series of overlapping pieces secured to inner wall at one end form shallow compartments for cards so arranged that each card is visible for easy identification. Deeper compartments at other end hold larger cards. Cellophane containers for photographs may be fastened at center. (Owner) Marion F. Bertalatto, Route 2, Monett, Mo. Group 31—72. Reg. No. 19,454.

Des. Pat. 122,635. DESIGN FOR A COMBINED SURGICAL ADJUSTER AND DILATOR. Patented Sept. 17, 1940. (Co-owner) Mary Haskins Hickok, 17 South Florence Ave., Tulsa, Okla. Group 39—15. Reg. No. 19,455.

Pat. 2,456,782. WASHCLOTH AND PAD HOLDER FOR THE BATH. Patented Dec. 21, 1946. Holder from which a bath cloth may be easily removed after use consists of a saucer-shaped head and a long curved handle. Folded cloth is placed over convex surface of head, and edges held by rounded end portion of handle keeper, which seats within concave surface. The handle keeper is slotted to fit around a pin recessed in a riser. Pin carries a button which is turned to attach handle to head or to release it. (Owner) Peter C. Hartman, 9950 Avenue J, Chicago 17, Ill. Groups 25—09; 39—81; 40. Reg. No. 19,456.

The following 15 patents are offered for license or sale by Albert C. Fischer, 6051 West 65th St., Chicago 38, Ill.

Pat. 2,194,649. PERFUMED SPONGE RUBBER ARTICLE. Patented Mar. 26, 1940. A pellet of wax mixed with flower oil is embedded in the center of a rubber sponge, the oil gradually evaporating through the cells of the sponge. Article is adapted for such uses as sachet for bureau drawers, lockers, toilets, etc., where it is desirable to overcome stale or unpleasant odors. Groups 28—32—34; 30—52; 40. Reg. No. 19,457.

Pat. 2,224,148. EXPANSION JOINT. Patented Dec. 10, 1940. Reg. No. 19,458.

Pat. 2,368,650. SELF-RESTORING WATER STOP AND OTHER WATERPROOFING PACKING. Patented Feb. 6, 1945. Reg. No. 19,459.

Pat. 2,370,153. CONTRACTION JOINT FOR CONCRETE. Patented Feb. 27, 1945. Reg. No. 19,460.

Pat. 2,370,647. POROUS BODY EXPANSION JOINT. Patented Mar. 6, 1945. Reg. No. 19,461.

Pat. 2,374,186. EXTRUSION CONTROLLED WATER-STOP EXPANSION JOINT. Patented Apr. 24, 1945. Reg. No. 19462.

Pat. 2,400,493. WATER STOP EXPANSION JOINT. Patented May 21, 1946. Reg. No. 19,463.

Pat. 2,431,384. SELF-RESTORING WATER-STOP AND OTHER WATERPROOFING PACKINGS. Patented Nov. 25, 1947. Reg. No. 19,464.

Pat. 2,431,385. POROUS BODY EXPANSION JOINT. Patented Nov. 25, 1947. Reg. No. 19,465.

Pat. 2,431,386. WATER-STOP EXPANSION JOINT. Patented Nov. 25, 1947. Reg. No. 19,466.

These nine patents describe various types of filler units used as expansion joints between the slabs of a concrete road, building construction, etc. The joints formed by the units do not extrude upwardly. As shown in Pat. 2,224,148 the filler may be a grooved yieldable core (of a composition similar to Pat. 2,454,506, Reg. No. 19,471) enclosed within a pair of sheet metal plates. Tongues cut in the plates extend outwardly and receive a dowel which holds the plates in position. In Pat. 2,370,153 two thin, sub-dividing plates are separably joined by an interfitting tongue and groove arrangement. A yieldable strip extends on either side of the plates and acts as a waterstop. Patents 2,370,647 and 2,431,385 describe resilient fibers sealed within an elastic waterproof outer cover such as sponge rubber to form a body recessed slightly below the surface of the road to permit asphalt to fill the crevice. The core described in Pat. 2,368,650, Pat. 2,374,186, Pat. 2,400,493, Pat. 2,431,384, and Pat. 2,431,386 has a number of wings which may or may not be integrally formed. The wings act as a waterstop apron to prevent the seepage of water into the joints between concrete slabs of various types of masonry construction. The wings and core may be filled with a bituminous material which includes an oily fluid. Groups 28—34; 29—31; 30—52; 32—71.

Pat. 2,316,232. FLOORING MATERIAL AND FLOOR CONSTRUCTION. Patented Apr. 13, 1943. Sound-deadening floor construction. Squares or lengths of wood flooring are laid alternately in combination with similarly shaped squares or planks made of a yielding plastic material such as a rubber and cork compound. Both the wood and compound planks, etc., are provided with interfitting tongue and groove formations so that they may be laid in the conventional manner. Groups 22—63; 24—31; 30—33. Reg. No. 19,467.

Pat. 2,354,586. METHOD OF AND MACHINE FOR TREATING AND LAYING STRIP MATERIAL FROM PACKAGES. Patented July 25, 1944. Machine is wheeled along road to deposit strip material between joints of concrete paving sections. Mounted on a frame are separate tanks containing an adhesive and fuel for a burner unit; a reel for the strip material; a heavy roller which presses the strip material into the joint; various guide wheels; and a pair of circular bristle brushes one of which acts to sweep the joint before application of the adhesive by the second brush. Strip material is unwound from the reel and heated to become tacky. An adhesive is applied to the walls of the crevice which has just been swept. The strip is guided into the joint and pressed into place by the heavy roller which passes over the strip. Several modifications are also shown for applying strip material to any flat surface. Group 35—31. Reg. No. 19,468.

Pat. 2,359,755. SELF-PACKING PIPE JOINT MOLD. Patented Oct. 10, 1944. Reg. No. 19,469.

Pat. 2,368,610. JOINING PIPE SECTIONS. Patented Jan. 30, 1945. Reg. No. 19,470.

These two patents describe methods of preparing pipe joint packings without the use of dams or dies. In Pat. 2,368,610 the spigot end of tile or metal pipe sections is joined to the bell end of a like section by forming a lining on the interior of the bell of one section while the sections are nested. Following the forming operation, the first section is withdrawn and the spigot end reinserted into the lined bell after an adhesive is applied, and a gas- and water-tight seal obtained. A thin tapered metal section is used in Pat. 2,359,755 to temporarily subdivide the packing space so that the bell liner and spigot facing strips may be formed. Mastic, or any other type of packing, is poured, after which the sections are separated. As previously described, an adhesive coating is applied before the sections are reassembled. Several modifications are shown in both patents. Group 28—34.

Pat. 2,454,506. COMPOSITION OF RUBBERLIKE QUALITIES. Patented Nov. 23, 1948. Composition of tacky texture which adheres easily to concrete, metal, or wood may be used in expansion joints, waterproof seals, etc. The composition is formed of a small amount of rubber (not less than 3.5%); 35–40% of brittle asphalt having a melting point of 170°–180° F.; a plasticising agent; 35–40% asphalt material of a different grade having a flow point of 90° F.; 5–10% of a mineral filler such as clay; and 1–3% of a flow-retarding agent such as litharge. The composition is yieldable, flexible, etc. It may be cut with solvents to produce a waterproofing paint, or a damp-proofing compound. Group 28—34. Reg. No. 19,471.

Pat. 2,456,885. TOILET. Patented Dec. 21, 1948. A flushing system for a toilet is designed to reduce noise of flushing and to thoroughly cleanse the bowl. Water released from a storage tank rushes through an inlet pipe, enters a duct at upper edge of bowl and jets through openings into bowl. The sudden volume of water causes the water to rush from bowl through a tangential outlet into a passage in a helix block, carrying with it contents of bowl. This creates a centrifugal action which maintains the density of the water, preventing aspiration of air and noises. Rising through the passage, the former contents of bowl pass through a discharge passage into sewer. (Owner) James F. Molloy, 525 East 21st St., Oakland 6, Calif. Group 32—61. Reg. No. 19,472.

Pat. 2,414,343. AUTOMOBILE LIGHTING DEVICE. Patented Jan. 14, 1947. Reg. No. 19,473.

Pat. 2,424,719. AUTO-REEL LIGHT. Patented July 29, 1947. Reg. No. 19,474.

Pat. 2,444,540. PORTABLE LIGHT. Patented July 6, 1948. Reg. No. 19,475.

These three patents show a trouble extension lamp for automobiles in which the switch structure is secured to back of dash, and the reel structure is clamped to steering post. Hood of automobile normally controls actuation of a resilient switch so that lamp will light when hood is opened and be extinguished when hood is closed. When hood is open, the switch may be manually depressed and held latched in "off" position by trip means, which become disengaged and rendered inoperative when hood is closed. A pawl and ratchet will retain extension cord in any payed out position, and a spring will rewind cord on reel when pawl is released. An articulated collapsible wire support secured to convex shell of lamp is adjustable to hold lamp in various positions to direct beam of light as desired. When support is collapsed, back of lamp fits snugly in a concave seat of reel housing. (Owner) Anthony Joseph Valrose, 3123 South Shields Ave., Chicago 16, Ill. Groups 36—31; 38—81.

Pat. 2,456,194. SLIDING SHOE RACK. Patented Jan. 4, 1949. A disappearing shoe rack to be slidably supported by the springs of a bed. A pair of spaced parallel hanger sections fitted to a cross tie are attached to a bed spring by clamping strips which overlie the springs. Runners are slidably engaged in channels at inner sides of the hanger sections. Their base pieces are secured to the outer sides of a movable rack frame. The rack is slidable outwardly next to the side rail of a bed. (Owner) Carl M. Panosh, 2930 South Wisconsin, Berwyn, Ill. Groups 25—99; 33—49—73; 39—81. Reg. No. 19,476.

Pat. 2,452,004. WARP STOP MOTION DROP WIRE. Patented Oct. 19, 1948. A spring steel drop wire for looms has an elongated slot, one side severed for easy removal or placing on the supporting bars of a stop motion mechanism without disturbing the other wires. Spaced below the slot is an eye through which a warp thread passes. The severed leg of the slot is closed by a slidable sleeve. (Owner) H. F. Weddington, 80 Kirk St., Salisbury, N. C. Groups 33—73; 35—52. Reg. No. 19,477.

Pat. 2,456,257. FLUSHING DEVICE FOR DOUCHE SYRINGES. Patented Dec. 14, 1948. A bulb type syringe has a pair of semi-cylindrical members near the nozzle end of tube for expanding orifice during a syringing operation. Enables the free flow of fluid to all parts of the orifice and provides drainage passages. The semi-cylindrical members are attached to operating levers which when pressed together open the semi-cylindrical members and expand the orifice. A movable ring encircles the levers and tube and locks levers in desired position. (Owner) William R. Curry, Box 707-6, Hawthorne, Nev. Groups 30—51; 39—15. Reg. No. 19,478.

Pat. 2,116,792. PAPER TOWEL DISPENSER. Patented May 10, 1938. A box-like cabinet for dispensing one sheet at a time from a stack of paper towels or the like having alternately arranged angular-folded front edges. The stack is supported at the back by an inwardly extending step, and at the front by a triangular bracket. Arms of a release lever, which is hinged at its center to bracket and supports the angular ends of alternate sheets of paper, extend through slots at front corners of cabinet. When an operating tab on end of lever arm is pressed, the lever swings on hinge pin and releases the angular portion of a sheet, which is then pulled from pile through the slot. The process is repeated on the opposite side for alternate sheets. (Owner) Edwin Jacobsen, 468 East Marigold St., Altadena, Calif. Groups 26—99; 33—73; 39—81. Reg. No. 19,479.

Pat. 2,257,340. FOLDED ARTICLE. Patented Sept. 30, 1941. A stack of sheets, such as paper napkins, etc., so folded for storage in an open-end dispensing cabinet that only one sheet can be touched and manually withdrawn at a time. Each sheet has a central fold to produce a double sheet. The front thickness of each sheet is folded inwardly and downwardly between the two thicknesses on an angular line. These extend alternately from the right and left top corners. Sheets are stacked with the central fold resting on the bottom of the container. (Owner) Edwin Jacobsen, 468 East Marigold St., Altadena, Calif. Groups 26—99; 40. Reg. No. 19,480.

Pat. 2,455,000. CURTAIN ROD SUPPORT. Patented Dec. 14, 1948. This curtain rod structure will accommodate drapes and curtains of varied widths and is attachable to windows of varied widths. It consists of a multiple number of brackets which are slidably and fixedly attachable to a ledge on the top of a window. The curtain rod is made up of a central core of rolled paper having two end rods slidably fitted thereto in order to vary the adjustment for length of the rod. (Owner) Joseph Irling, % Stanley Kniczycki, 1858 West Artesian Ave., Chicago, Ill. Group 25—62. Reg. No. 19,481.

Pat. 2,458,875. MUSIC BOX. Patented Jan. 11, 1949. This music box construction has reed-like elements secured at one end, the other end remaining free so that they may be strummed or vibrated by plucking with the fingers or with a pick. The instrument has a sound board as its base supported on legs so that when the instrument is played while resting on a larger surface, such as a table, it will influence the surface by virtue of the principle of sympathetic vibration. (Owner) Adolph Pfeiffer, 1421 West Adams St., Chicago, Ill. Group 39—30. Reg. No. 19,482.

Pat. 2,415,612. LOCK STRUCTURE. Patented Feb. 11, 1947. A lock structure for safes which may be operated by a hand wheel or by a cable attached to a drum embedded in the safe. A cable system is embedded in the walls of a safe and moves in sliding guides attached to a rigid support. When actuated by a hand wheel, the gear meshes with a toothed plate and causes the cables to slide and actuate the locks at ends of the cables. When the device is operated from a distant point, the gear wheel is moved by a drum embedded in the safe and operated by another cable attached to a steel band wound upon the drum. (Owner) Mrs. Valerie Straessli, Rua da Bahia, 492—Apt. 6, Belo Horisonte, Est. Minas Gerais, Brazil. Group 33—98. Reg. No. 19,483.

Pat. 2,454,725. CAN PIERCER. Patented Nov. 23, 1948. A wall bracket device for piercing containers of liquid may be manufactured in two parts from sheet metal and heavy wire. A wall bracket has a side portion and a step-seat to support a small can, and a lower extension step-seat for a large can. An overhanging head portion has a downwardly extending piercing point above small can and an auxiliary piercing point for large can. A heavy bent wire pusher having a fulcrum trunnion, and a handle at end of lever, is pivoted below the can seats for pushing the can upward against the piercing point. (Owner) Joseph E. Thomas, P. O. Box 711, West Los Angeles 25, Calif. Group 33—49—51—73. Reg. No. 19,484.

Pat. 2,316,994. BOMB. Patented May 11, 1943. A metal bullet-shaped shell has a leading nose end, and spaced fins grouped in a circle at the butt end. The shell is divided into chambers. A detonating cap chamber has a fuse composition behind the cap. A rear chamber is filled with a high explosive, and an intermediate chamber is packed with Thermit. A nipple extends from the cap chamber into the intermediate chamber. A time fuse extends from the cap chamber into the end chamber. When bomb strikes a target, the cap is exploded and ignites the fuse material, which through the nipple ignites the Thermit. When the time fuse burns to the explosive, the bomb bursts, spreading the Thermit over a wide area. The fragments of the bomb act as shrapnel. (Owner) August Helmbold, 716 Columbia St., Newport, Ky. Group 33—X2. Reg. No. 19,485.

Pat. 2,453,508. VALVE COOLING MEANS FOR INTERNAL COMBUSTION ENGINES. Patented Nov. 9, 1948. This invention relates to a deflecting means which causes incoming gas in valve chambers of internal combustion engines to cool the exhaust valves before the gas is ignited. An elongated deflector baffle is provided in the valve chamber to cause gas admitted by the intake valve to pass through and around cooling studs on the exhaust valve. The baffle extends alongside the valves, the major portion curving part way around the intake valve to collect gas, and terminates in an oppositely curved portion opposite the exhaust end. (Owner) August Helmbold, 716 Columbia St., Newport, Ky. Group 35—19. Reg. No. 19,486.

Pat. 2,447,123. THERAPEUTIC DEVICE. Patented Aug. 17, 1948. Device for mixing and discharging a stream of water and air may be connected to a water supply (and held in one hand) to administer hydro-therapeutic treatments. It is adjustable to provide proper mixture regardless of existing water pressure. It consists of a cylindrical casing having the flared end of a nozzle connected to its forward end, and a lateral air inlet near its rear end. Casing is partitioned by a transverse perforated baffle to provide a mixing chamber forwardly of baffle. A water supply conduit extends centrally inwardly through rear end of casing and through baffle into mixing chamber. Flow of water through device draws air from atmosphere into mixing chamber where it mixes with swirling water discharged from end of conduit. Modified forms of adjustable conduits are shown so that the water may be sprayed from end of conduit against the sides of mixing chamber in the form of either divergent jets or a conical sheet. (Owner) Allan Pierce Jones, 2745 29th St. N. W., Washington 8, D. C. Group 39—15—16. Reg. No. 19,487.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 10, 1949

[VOL. 622. NO. 2]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 506,136. SUNSHINE PRODUCTS COMPANY, Seattle, Wash. Filed July 23, 1946.

Kleenaire

FOR DEODORANT AND DISINFECTANT FOR URINALS.

Claims use since July 15, 1936.

Ser. No. 551,214. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed Mar. 5, 1948.

MELMAC

Applicant claims ownership of Registration No. 388,600.
FOR TABLEWARE, CONSISTING OF CUPS, SAUCERS, PLATES, PLATTERS, BOWLS, AND DISHES, MOLDED OF PLASTIC OR SYNTHETIC RESINS.
Claims use since Feb. 18, 1948.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 512,376. BROWN & BIGELOW, St. Paul, Minn. Filed July 5, 1947; originally filed, act of 1905, Nov. 12, 1946.

Remembrance Advertising

No claim is made to the word "Advertising" apart from the mark as shown. Applicant claims ownership of Registrations Nos. 189,732, 147,758, 230,599, and 412,238.
FOR PORTFOLIOS, POCKETBOOKS, WALLETS, AND LEATHER-COVERED RECEPTACLES SUCH AS PORTFOLIOS, POCKETBOOKS, AND BRIEF CASES.
Claims use since Mar. 1, 1920.

Ser. No. 547,781. M. SLIFKA & SONS, INC., New York, N. Y. Filed Jan. 22, 1948.

Tuck-away

FOR PURSES, WALLETS, COMBINATION PURSES AND WALLETS, AND BEACH BAGS.
Claims use since December 1947.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 535,842. HENRY B. HELLER CORP., St. Louis, Mo. Filed Sept. 26, 1947.

TETFOAM

Applicant claims ownership of Registrations Nos. 432,644 and 432,645.
FOR DEGREASER FOR CLEANING COOKING UTENSILS, ENAMEL AND TILE SURFACES, KITCHEN FURNITURE, WOODWORK, PAINTED WALLS, LINOLEUM, GLASSWARE, AND THE LIKE.
Claims use since Aug. 15, 1946.

Ser. No. 540,952. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Nov. 12, 1947.

F. S.

FOR DETERGENT COMPOUND FOR INDUSTRIAL METAL CLEANING.
Claims use since Nov. 5, 1940.

Ser. No. 549,204. JOHN H. WOODBURY, INC., Cincinnati, Ohio. Filed Feb. 9, 1948. Under section 2f of the act of 1946.

Woodbury

Applicant claims ownership of Registrations Nos. 68,594, 101,612, 112,426, 305,543, and 305,564.
FOR FACIAL SOAP AND SHAVING SOAP.
Claims use since Jan. 1, 1891.

Ser. No. 557,281. J. F. KURFEES PAINT COMPANY, Louisville, Ky. Filed May 18, 1948. Under section 2f of the act of 1946.

KURFEES

Applicant claims ownership of Registrations Nos. 143,856 and 360,163.
FOR LIQUID CLEANERS FOR FLOORS AND PAINTED SURFACES.
Claims use since Jan. 1, 1907.

Ser. No. 557,282. J. F. KURFEES PAINT COMPANY, Louisville, Ky. Filed May 18, 1948. Under section 2f of the act of 1946.

KURFEES

Applicant claims ownership of Registrations Nos. 143,856 and 360,163.
FOR LIQUID CLEANERS FOR FLOORS AND PAINTED SURFACES.
Claims use since Feb. 12, 1938.

Ser. No. 558,183. VIRGINIA-CAROLINA CHEMICAL CORPORATION, Richmond, Va. Filed May 29, 1948.

VICARDEE

FOR CLEANSER IN POWDER FORM FOR USE IN THE FOOD INDUSTRY AND IN ALL OTHER CLEANING WHERE OIL AND GREASE EMULSIFICATION IS OF PARAMOUNT IMPORTANCE.
Claims use since Apr. 13, 1948.

Ser. No. 558,187. VIRGINIA-CAROLINA CHEMICAL CORPORATION, Richmond, Va. Filed May 29, 1948.

VICARSan

FOR ALKALINE CLEANSER IN POWDER FORM FOR USE IN FOOD INDUSTRY INCLUDING DAIRY FARMS.
Claims use since Apr. 13, 1948.

Ser. No. 558,507. PEERLESS SAL-O-WELL COMPANY, INCORPORATED, Buffalo, N. Y. Filed June 4, 1948.

VELVA PINE

The word "Pine" is disclaimed apart from the mark as shown.
FOR PREPARATION FOR CLEANING WALLS, TILE, PORCELAIN, WOODWORK, FLOORS, AND THE LIKE.
Claims use since 1940.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 512,400. GERMAINE RENE DUVAL, Suresnes, France. Filed Feb. 17, 1948; originally filed, act of 1905, Nov. 12, 1946. Under section 2f of the act of 1946.

PARFUMS VOLNAY

Applicant claims ownership of French Registration No. 180,522, dated May 15, 1919.
FOR PERFUMES, TOILET WATERS, ROUGE, LIPSTICK, AND FACE CREAMS.

Ser. No. 516,821. THE CRAMER CHEMICAL COMPANY, Gardner, Kans. Filed Jan. 28, 1949; originally filed, act of 1905, Feb. 3, 1947.

Atomic Balm

The word "Balm" is disclaimed.
FOR ANALGESIC BALM AND OINTMENT PREPARATIONS.
Claims use since Jan. 9, 1946.

Ser. No. 517,160. B. G. PRATT COMPANY, Hackensack, N. J. Filed Jan. 26, 1948; originally filed, act of 1905, Feb. 7, 1947. Under section 2f of the act of 1946.

PARA-SCALECIDE

Applicant claims ownership of Registration No. 54,343.
FOR CONCENTRATE IN LIQUID FORM FOR THE CONTROL OF PEACH TREE BORER.
Claims use since Sept. 30, 1936.

Ser. No. 528,146. JEANNE PIAUBERT, born Jeanne Quenon, Paris, France. Filed July 8, 1947.

Applicant claims ownership of French Registration No. 401,734, dated Dec. 18, 1946.
FOR PERFUMES, TOILET LOTIONS, FACE POWDERS, LIPSTICKS.

Ser. No. 528,498. BOB MARTIN (EXPORT) LIMITED, Lancashire, England. Filed July 12, 1947.

TIBS

Applicant claims ownership of British Registration No. 501,768, dated Oct. 19, 1938.
FOR VETERINARY PREPARATIONS FOR CATS AND DOGS, TAKEN INTERNALLY.

Ser. No. 529,984. BOLIDENS GRUVAKTIEBOLAG, Skellefteham, Sweden. Filed July 30, 1947.

Applicant claims ownership of Swedish Registration No. 60,942, dated Mar. 8, 1946.
FOR CHEMICAL WOOD PRESERVATIVES, INSECTICIDES, FUNGICIDES, AND BISMUTH SALTS.

Ser. No. 531,675. JAMIESON PHARMACAL COMPANY, Detroit, Mich. Filed Aug. 16, 1947.

PENO-BAR

FOR SODIUM PENTOBARBITAL CAPSULES FOR MEDICINAL USE.
Claims use since May 24, 1940.

Ser. No. 538,056. DAVID RICHARD URAN, Larchmont, N. Y. Filed Oct. 16, 1947.

DRU-SOL

FOR LIQUID MEDICINE TO BE APPLIED FOR EXTERNALLY CAUSED SKIN IRRITATIONS.
Claims use since Jan. 1, 1945.

Ser. No. 542,238. STANLEY HOME PRODUCTS, INC., Westfield, Mass. Filed Aug. 20, 1947. Under section 2f of the act of 1946.

QUALITY PLUS

Applicant claims ownership of Registration No. 368,530.
FOR MOTH REPELLENT, AND DEODORIZING PREPARATIONS.
Claims use since Mar. 15, 1938.

Ser. No. 542,420. AMERICAN MOTH PRODUCTS CORP., New York, N. Y. Filed Nov. 26, 1947.

MOTHMASTER

Applicant claims ownership of Registration No. 246,764.
FOR INSECTICIDES AND MOTHPROOFING AGENTS.
Claims use since Nov. 13, 1947.

Ser. No. 545,857. INTERNATIONAL MINERALS AND CHEMICAL CORPORATION, Chicago, Ill. Filed Dec. 31, 1947.

CHLORASEC

FOR POTASSIUM CHLORATE.
Claims use since Nov. 25, 1947.

Ser. No. 548,172. NATHALIE VON DEZEN, nee Kachkine, Paris, France. Filed Jan. 28, 1948.

ETIMOLOS

The drawing is lined for shading. Applicant claims ownership of French Registration No. 268,299, dated May 1, 1930.
FOR INSECTICIDES, WEEDICIDES, DISINFECTANTS, AND BACTERICIDES FOR APPLICATION TO AND THE PROTECTION OF PLANTS, TREES, AND TIMBER.

Ser. No. 550,129. D'ORSAY PERFUMERIES CORPORATION, New York, N. Y. Filed Feb. 19, 1948.

FOR TOILET WATERS, PERFUMED SACHET IN POWDER FORM, FACE AND TALCUM POWDERS, LIPSTICKS, EYEBROW PENCILS, BATH SALTS, SHAMPOOS, BRILLIANTINES, PERFUME PREPARATIONS, AND PERFUME EXTRACTS.
Claims use since 1912.

Ser. No. 550,296. BEAUTYMASTERS OF BEVERLY HILLS, INC., Milwaukee, Wis. Filed Feb. 21, 1948.

BUDAPEST

FOR BATH OIL.
Claims use since Dec. 3, 1946.

Ser. No. 550,382. CALIFORNIA SPRAY-CHEMICAL CORPORATION, Wilmington, Del., and Richmond, Calif. Filed Feb. 24, 1948.

ALLPHOS

FOR PARASITICIDES—NAMELY, INSECTICIDES AND FUNGICIDES; AND HERBICIDES.
Claims use since Jan. 9, 1948.

Ser. No. 554,185. G. H. WOOD & COMPANY LIMITED, Toronto, Ontario, Canada. Filed Apr. 8, 1948.

FOR AGRICULTURAL INSECTICIDES USED ON FIELD CROPS AND ACTIVE INGREDIENTS AND CONCENTRATES SOLD FOR FORMULATION OF SUCH INSECTICIDES.
Claims use since Nov. 7, 1947.

Ser. No. 554,841. JACOB L. WAGNER, doing business as Wagner Drug Company, Dayton, Ohio. Filed Apr. 16, 1948.

ALCOMITE

FOR PHARMACEUTICAL PREPARATION FOR TREATING INFECTIONS OF THE SKIN.
Claims use since Mar. 26, 1936.

Ser. No. 555,084. RESIDEX CORPORATION, Newark, N. J. Filed Apr. 20, 1948.

RESIPROOFER

Applicant claims ownership of Registration No. 437,170.
FOR INSECTICIDE.
Claims use since Jan. 29, 1948.

Ser. No. 555,243. BOYLE AND COMPANY, Los Angeles, Calif. Filed Apr. 22, 1948.

Stilbest-ORAL

The word "Oral" is disclaimed.
FOR DIETHYLSTILBESTROL IN TABLET FORM FOR USE IN CASES OF THREATENED OR HABITUAL ABORTION.
Claims use since Sept. 11, 1947.

Ser. No. 555,818. STEPHAN PRODUCTS INC., Worcester, Mass. Filed Apr. 22, 1948. Under section 2f of the act of 1946.

Stephan's

FOR DANDRUFF REMOVER HAIR LOTION AND DANDRUFF REMOVER HAIR LOTION WITH OIL.
Claims use since April 1923.

Ser. No. 555,537. JEWEL TEA CO., INC., Barrington, Ill. Filed Apr. 24, 1948.

U NO ME

FOR CONSUMER SIZED PACKAGES OF TRI-SODIUM PHOSPHATE, WHICH IS USED FOR WATER SOFTENING, WASHING WALLS, AND OTHER HEAVY DUTY HOUSEHOLD CLEANING.
Claims use since April 1934.

Ser. No. 556,615. LAWRENCE MARION AMES, Alexandria, Va. Filed May 10, 1948.

A F O

FOR COMPOSITIONS FOR TREATMENT OF FUNOAL INFESTATIONS OF SKIN AND OF OTHER PARTS OF THE BODY.
Claims use since Aug. 1, 1947.

Ser. No. 557,765. ORGANIC CHEMICALS, INC., Pasadena, Calif. Filed May 25, 1948.

Histex

FOR HISTIDINE COMPOUNDS.
Claims use since Nov. 27, 1947.

Ser. No. 558,395. IDEAL PRODUCTS, INC., Waxahachie, Tex. Filed June 3, 1948.

Trudi

FOR COSMETICS—NAMELY, SHAMPOOS.
Claims use since May 1, 1948.

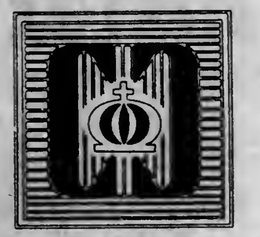
Ser. No. 558,746. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed June 8, 1948.

ALLSTATE

FOR CHEMICAL PREPARATIONS USED FOR AUTOMOBILE SUPPLIES—NAMELY, GROUP A, RADIATOR RUST INHIBITOR, RUST PREVENTATIVE, RADIATOR SEALING COMPOUNDS, HYDRAULIC BRAKE FLUID, SHOCK ABSORBER FLUID, RUBBER PRESERVATIVES, FIRE EXTINGUISHING FLUID, LIQUID FOR COATING AND IMPREGNATING TEXTILE FABRICS AND OTHER MATERIALS FOR WATER PROOFING AND PRESERVING PURPOSES; GROUP B, ANTI-FREEZE.
Claims use on Group A Since July 15, 1945; and on Group B since July 15, 1946.

Ser. No. 560,430. ESTELLE WYLEE, INC., New York, N. Y. Filed June 29, 1948.

Keylene



The trade-mark consists of the name "Keylene."
FOR FACE CREAMS, FACE POWDERS, AND LIPSTICKS.
Claims use since Mar. 1, 1948.

Ser. No. 560,991. DOLCIN CORPORATION, New York, N. Y. Filed July 9, 1948.

VERAMBERSIN

FOR MEDICINAL PREPARATION FOR INTERNAL VETERINARY USE IN THE RELIEF OF THE SYMPTOMS OF RHEUMATISM, ARTHRITIS, AND OTHER RHEUMATOID CONDITIONS.
Claims use since July 27, 1947.

Ser. No. 561,292. CARON CORPORATION, New York, N. Y. Filed July 14, 1948.

FOR PERFUME, TOILET WATER, ROUGES, FACE POWDER, TALCUM POWDER, LOTIONS, SACHET POWDERS, AND LIPSTICK.
Claims use since Sept. 10, 1947.

Ser. No. 561,610. CARON CORPORATION, New York, N. Y. Filed July 17, 1948.

The drawing is lined to indicate the color gold.
FOR PERFUME, TOILET WATER, ROUGES, FACE POWDER, TALCUM POWDER, LOTIONS, AND SACHET POWDERS.
Claims use since Sept. 10, 1947.

Ser. No. 561,745. GRANT CHEMICAL CO., INC., New York, N. Y. Filed July 20, 1948.

des

FOR MEDICAL PREPARATION FOR THE PREVENTION AND TREATMENT OF THREATENED AND HABITUAL ABORTION, MISCARRIAGE, AND PREMATURE LABOR.
Claims use since June 22, 1948.

Ser. No. 562,271. M. V: C. LABORATORIES, INC., Toledo, Ohio. Filed July 27, 1948.

Miraglo

Applicant claims ownership of Registration No. 306,610.
FOR MANICURE PREPARATIONS—NAMELY, NAIL POLISH, POLISH REMOVER, CUTICLE REMOVER, CUTICLE OIL, AND HAND CREAM.
Claims use since Dec. 27, 1932.

Ser. No. 563,529. ELIZABETH ARDEN SALES CORPORATION, New York, N. Y. Filed June 14, 1948.

STAR STRIP-EASY

Applicant claims ownership of Registrations Nos. 389,949, 42,909, 391,079, 392,515, and 393,102.
FOR CONCRETE FORM TIES.
Claims use since June 1, 1939.

Ser. No. 534,408. ARMSTRONG CORK COMPANY, Lancaster, Pa. Filed Sept. 13, 1947.

TRAVERTONE

FOR MINERAL WOOL ACOUSTICAL TILE.
Claims use since July 25, 1947.

Ser. No. 538,896. CORRY-JAMESTOWN MANUFACTURING CORPORATION, Corry, Pa. Filed Oct. 24, 1947.

INSUL-VENT

The word "Vent" is disclaimed apart from the mark as shown.
FOR WINDOWS, WINDOW FRAMES, WINDOW SCREENS, FRAMED COMBINATION STORM AND SCREEN SASH.
Claims use since Sept. 23, 1947.

Ser. No. 545,575. CARR, ADAMS & COLLIER COMPANY, Dubuque, Iowa. Filed Dec. 27, 1947. Under section 2f of the act of 1946.

BILT WELL

Applicant claims ownership of Registrations Nos. 141,030 anud 388,175.
FOR FABRICATED WOODWORK—VIZ., FIREPLACE MANTLES, STAIR WORK, STAIR PARTS, CASEMENTS AND FRAMES THEREFOR, WINDOW FRAMES, COMBINATION (STORM AND SCREEN) DOORS, ENTRANCES, DOORS AND FRAMES THEREFOR, GARAGE DOORS, GABLE SASH AND LOUVRES AND FRAMES THEREFOR, AND WINDOW AND DOOR SCREENS.
Claims use since March 1920.

Ser. No. 547,580. THE TECHKOTE COMPANY, Inglewood, Calif. Filed Jan. 20, 1948.

Meet the Specs with SEALTEX

The words "Meet the Specs With" are disclaimed.
FOR CONCRETE CURING COMPOUNDS.
Claims use since Nov. 17, 1947.

Ser. No. 553,037. VOORHEES RUBBER MFG. CO., INC., New York, N. Y. Filed Mar. 25, 1948. Under section 2f of the act of 1946.

VOORHEES

Applicant claims ownership of Registration No. 170,255.
FOR RUBBER FLOORING IN TILE AND SHEET FORM.
Claims use since 1898.

Ser. No. 553,038. VOORHEES RUBBER MFG. CO., INC., New York, N. Y. Filed Mar. 25, 1948. Under section 2f of the act of 1946

VOORHEES RUBBER MFG. CO. INC.

Applicant claims ownership of Registration No. 170,255.
FOR RUBBER FLOORING IN TILE AND SHEET FORM.
Claims use since 1920.

Ser. No. 556,277. THE PHILIP CAREY MANUFACTURING COMPANY, Cincinnati, Ohio. Filed May 5, 1948. Under section 2f of the act of 1946.

Carey stone

Applicant claims ownership of Registrations Nos. 105,340 and 134,525.
FOR ASBESTOS AND CEMENT COMPOSITION BOARD FOR BUILDING PURPOSES.
Claims use since July 1, 1942.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 517,081. NATIONAL PRESSURE COOKER COMPANY, Eau Claire, Wis. Filed Sept. 3, 1947; originally filed, act of 1905, Feb. 6, 1947.

Presto

Applicant claims ownership of Registrations Nos. 884,941 and 506,813.
FOR ADJUSTABLE DIVIDERS FOR USE IN SEPARATELY COOKING DIFFERENT FOODS IN A SINGLE COOKING VESSEL.
Claims use since Jan. 6, 1947.

Ser. No. 518,657. COLUMBIAN ENAMELING & STAMPING CO., INC., Terre Haute, Ind. Filed Jan. 5, 1948; originally filed, act of 1905, Mar. 7, 1947.

COLONIAL ENAMEL WARE

The words "Enamel Ware" are disclaimed apart from the mark. Applicant claims ownership of Registration No. 92,045 (expired).
FOR ENAMEL COATED METALLIC COOKING POTS AND KETTLES, TEA-KETTLES, DOUBLE BOILERS, DISH PANS, SAUCE PANS, REFRIGERATOR PANS, PERCOLATORS, AND DRIP COFFEE MAKERS.
Claims use since Jan. 1, 1911.

Applicant claims ownership of Registrations Nos. 89,292, 177,413, 122,226, 161,826, and 197,774.
FOR RAIL ANCHORS.
Claims use since Nov. 19, 1940.

Ser. No. 554,904. METALS & CONTROLS CORPORATION, Attleboro, Mass. Filed Apr. 17, 1948.

ALCUPLATE

FOR LAMINATED METALS IN SHEET, TUBE, AND WIRE FORM.
Claims use since Dec. 8, 1944.

Ser. No. 560,927. SCHUYLKILL PRODUCTS COMPANY, INC., Baton Rouge, La. Filed July 8, 1948.

BAROLA

FOR LEAD INGOTS AND LEAD PIGS.
Claims use since Sept. 15, 1947.

CLASS 15

OILS AND GREASES

Ser. No. 521,306. J. W. SPEAKER CORPORATION, Milwaukee Wis. Filed Apr. 16, 1948; originally filed, act of 1905, Apr. 23, 1947.

fretone

FOR MOTOR TUNE-UP OIL.
Claims use since Dec. 1, 1938.

Ser. No. 535,677. BAYOU STATE OIL CORPORATION, Shreveport, La. Filed Sept. 25, 1947.

Bio-Prēm

The word "Prēm" is disclaimed. Applicant claims ownership of Registrations Nos. 337,226, 392,426, and 439,139.
FOR LUBRICATING OIL FOR DIESEL ENGINES.
Claims use since Aug. 23, 1947.

Ser. No. 548,631. BARNO OIL COMPANY, Wilmington, Del. Filed Feb. 3, 1948.

9 - IN - 1

FOR TOP CYLINDER OIL—NAMELY, A LUBRICANT FOR LUBRICATING THE VALVES AND UPPER PORTIONS OF CYLINDERS IN INTERNAL COMBUSTION ENGINES.
Claims use since March 1928.

Ser. No. 551,548. ESSO STANDARD OIL COMPANY, Wilmington, Del., and New York, N. Y. Filed Mar. 9, 1948. Under section 2f of the act of 1946.

BASEKOTE

Applicant claims ownership of Registration No. 406,500.
FOR LUBRICATING GREASE.
Claims use since Mar. 7, 1939.

Ser. No. 552,257. THE NATIONAL REFINING COMPANY, Cleveland, Ohio. Filed Mar. 16, 1948.

EN-AR-CO

Applicant claims ownership of Registrations Nos. 103,859, 372,212, 374,742, 394,358, 397,671, and 401,682.
FOR LUBRICATING OIL AND GREASE.
Claims use since December 1930.

Ser. No. 554,148. PENNSYLVANIA REFINING COMPANY, Butler, Pa. Filed Apr. 8, 1948.

DRAKEOIL

FOR WHITE MINERAL OILS USED AS LUBRICANTS.
Claims use since February 1938.

Ser. No. 554,534. TIDE WATER ASSOCIATED OIL COMPANY, New York, N. Y. Filed Apr. 13, 1948.

TYCOL

APACYL

Applicant claims ownership of Registrations Nos. 197,753 and 248,570.
FOR LUBRICATING OIL.
Claims use since Jan. 2, 1948.

Ser. No. 554,575. F. L. JACOSS CO., Detroit, Mich. Filed Apr. 14, 1948.

LUBROPAK

Applicant claims ownership of Registration No. 308,239.
FOR LUBRICATING OIL COMPOUNDS FOR LEAF SPRINGS.
Claims use since June 21, 1933.

Ser. No. 555,463. TIDE WATER ASSOCIATED OIL COMPANY, New York, N. Y. Filed Apr. 23, 1948.

TYCOL

AUDUBON

Applicant claims ownership of Registrations Nos. 197,753 and 248,570.
FOR LUBRICATING OIL.
Claims use since Jan. 13, 1948.

Ser. No. 556,963. THE HODSON CORPORATION, Chicago, Ill. Filed May 13, 1948.

NONSEPARA

FOR LUBRICATING OIL.
Claims use since Dec. 12, 1938.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 531,589. HARLEY-DAVIDSON MOTOR COMPANY, Milwaukee, Wis. Filed Aug. 16, 1947. Under section 2f of the act of 1946.

COROCO CONTACT WHEEL

The line shading in the drawing indicates the colors red and blue, and no claim is made to exclusive rights in the words "Contact Wheel" apart from the mark. Applicant claims ownership of Registrations Nos. 87,854, 301,590, and 365,258.
FOR WHEELS MADE OF FIBER FOR SUPPORTING ENDLESS ABRASIVE BANDS OR BELTS IN ABRADING MACHINES.
Claims use since Apr. 4, 1946.

Ser. No. 516,417. WILLIAM ISENBERG, doing business under the assumed name of Columbia Razor Blade Company, Los Angeles, Calif. Filed Feb. 2, 1948; originally filed, act of 1905, Jan. 27, 1947.

Hollywood

FOR RAZOR BLADES.
Claims use since Dec. 16, 1946.

Ser. No. 526,985. DODGE MANUFACTURING CORPORATION, Mishawaka, Ind. Filed July 5, 1947. Under section 2f of the act of 1946.

BronZoil

FOR PILLOW BLOCK BEARINGS HAVING POROUS BRONZE BUSHINGS.
Claims use since Dec. 31, 1932.

Ser. No. 547,492. THE STAPLES TOOL COMPANY, Cincinnati, Ohio. Filed Jan. 19, 1948.

ECONOCUT

FOR CARBIDE TIPPED REAMERS.
Claims use since Sept. 1, 1947.

Ser. No. 549,561. MCGILL MANUFACTURING COMPANY, INC., Valparaiso, Ind. Filed Feb. 12, 1948.

MULTIROL

Applicant claims ownership of Registration No. 322,787.
FOR ANTI-FRICTION BEARINGS.
Claims use since Sept. 6, 1934.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 530,417. MODERN OPTICS, INC., Houston, Tex. Filed Aug. 4, 1947.

AKRO

FOR MULTI-FOCAL SPECTACLE LENSES AND LENS BLANKS.
Claims use since June 25, 1946.

Ser. No. 534,416. CONTINENTAL OPTICAL COMPANY, INC., Indianapolis, Ind. Filed Sept. 13, 1947.

KUROVA

Applicant claims ownership of Registration No. 155,269.
FOR OPTHALMIC LENSES.
Claims use since Aug. 15, 1921.

Ser. No. 543,310. MASTER RULE MANUFACTURING CO., INC., White Plains, N. Y. Filed Dec. 4, 1947. Under section 2f of the act of 1946.

Brite-Blade

Applicant claims ownership of Registration No. 385,907.
FOR RULES, FOLDING RULES, AND EXTENSION RULES.
Claims use since July 1939.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 560,218. RING WATCH COMPANY OF AMERICA, INC., New York, N. Y. Filed June 25, 1948.

Tosca

FOR WATCHES.
Claims use since May 1, 1948.

Ser. No. 560,831. GENERAL TIME INSTRUMENTS CORPORATION, New York, N. Y., and Thomaston, Conn. Filed June 28, 1948.

S.T.

Applicant claims ownership of Registration No. 68,894.
FOR CLOCKS.
Claims use since Dec. 26, 1876.

Ser. No. 563,373. AARON STERN, New York, N. Y. Filed Aug. 13, 1948.

GARON

FOR WATCHES.
Claims use since June 9, 1948.

Ser. No. 563,602. BUTLER BROTHERS, Chicago, Ill. Filed Aug. 17, 1948.

Filed Dec. 17, 1947, Serial No. 544,555. Published Jan. 4, 1949. Class 37.

509,703. SKIN OINTMENT FOR PIMPLES, ACNE, ECZEMA, POISON IVY, PSORIASIS, AND SIMILAR SKIN AND SCALP AILMENTS. MADELEINE LABORATORIES, INC., Wilmington, Del.
Filed Oct. 21, 1947, Serial No. 544,652. Published Feb. 1, 1949. Class 6.

509,704. MATCHES. THE OHIO MATCH COMPANY, Wadsworth, Ohio.
Filed Oct. 27, 1947, Serial No. 544,667. Published Jan. 11, 1949. Class 9.

509,705. MATCHES. THE OHIO MATCH COMPANY, Wadsworth, Ohio.
Filed Oct. 27, 1947, Serial No. 544,668. Published Jan. 11, 1949. Class 9.

509,706. MOTORCYCLES AND CONSTRUCTIVE PARTS THEREOF. INDIAN MOTOCYCLE COMPANY, Springfield, Mass.
Filed Dec. 20, 1947, Serial No. 545,002. Published Jan. 11, 1949. Class 19.

509,707. BATTS AND BATTING MATERIALS, MADE OF COTTON, WOOL, SYNTHETIC FIBERS, AND COMBINATIONS THEREOF. SEARS, ROEBUCK AND CO., Chicago, Ill.
Filed Dec. 22, 1947, Serial No. 545,175. Published Jan. 25, 1949. Class 1.

509,708. HYDRAULIC LIFT TRAILERS FOR ATTACHMENT TO AUTOMOBILES OR LIGHT TRUCKS FOR MOVING COMPARATIVELY LIGHT OBJECTS. CORUM & HALLOCK MFG. CO., Kansas City, Mo.
Filed Dec. 23, 1947, Serial No. 545,238. Published Jan. 4, 1949. Class 19.

509,709. PREPARATION FOR THE TREATMENT OF GOUT AND RHEUMATISM. ETIENNE BEJEAN, Paris, France.
Filed Jan. 2, 1948, Serial No. 545,945. Published Jan. 25, 1949. Class 6.

509,710. LOOSE LEAF BINDERS. NATIONAL BLANK BOOK COMPANY, Riverside, Holyoke, Mass.
Filed Jan. 2, 1948, Serial No. 546,013. Published Jan. 4, 1949. Class 37.

509,711. SPOKES AND NIPPLES FOR WHEELS OF CYCLE VEHICLES; PEDALS FOR BICYCLES AND MOTORCYCLES; HANDLE BARS AND HANDLE BAR STEMS. THE TORRINGTON COMPANY, Torrington, Conn.
Filed Jan. 2, 1948, Serial No. 546,071. Published Jan. 4, 1949. Class 19.

509,712. COAL. CROZER-POCAHONTAS COMPANY, Philadelphia, Pa.
Filed Jan. 5, 1948, Serial No. 546,191. Published Jan. 25, 1949. Class 1.

509,713. BOND PAPERS, BRISTOL BOARD, GLASSINE, OFFSET PAPERS, TISSUE PAPER, PAPER BOARD, AND PRINTING PAPERS. CENTRAL NATIONAL CORPORATION, New York, N. Y.
Filed Jan. 8, 1948, Serial No. 546,465. Published Jan. 4, 1949. Class 37.

509,714. BOND PAPERS, BRISTOL BOARD, GLASSINE, OFFSET PAPERS, TISSUE PAPER, PAPER BOARD, AND PRINTING PAPERS. CENTRAL NATIONAL CORPORATION, New York, N. Y.
Filed Jan. 8, 1948, Serial No. 546,466. Published Jan. 4, 1949. Class 37.

509,715. COAL. THE RELIANCE COAL AND COKE CO., Cincinnati, Ohio.
Filed Jan. 9, 1948, Serial No. 546,607. Published Feb. 1, 1949. Class 1.

509,716. STABILIZED ROSIN. THE GLIDDEN COMPANY, Cleveland, Ohio.
Filed Jan. 10, 1948, Serial No. 546,695. Published Feb. 1, 1949. Class 1.

509,717. MINERAL WATERS FOR MEDICINAL PURPOSES, EFFERVESCENT CRYSTALS, AND LAXATIVE PILLS. PLUTO CORPORATION, French Lick, Ind.
Filed Jan. 10, 1948, Serial No. 546,728. Published Jan. 25, 1949. Class 6.

509,718. AUTOMOBILE SEAT COVERS. BEN PEPPERMAN MOTOR SALES CORPORATION, South Bend, Ind.
Filed Jan. 15, 1948, Serial No. 547,106. Published Jan. 11, 1949. Class 19.

509,719. PERFUMES, FACE CREAMS, ROUGE. SOCIETE ANONYME, BIENAIME, Paris, France.
Filed Jan. 15, 1948, Serial No. 547,161. Published Jan. 18, 1949. Class 6.

509,720. PIGMENT COLORS USED IN THE MANUFACTURE OF INK. SUN CHEMICAL CORPORATION, New York, N. Y.
Filed Jan. 15, 1948, Serial No. 547,169. Published Jan. 18, 1949. Class 11.

509,721. PRINTING INK. SUN CHEMICAL CORPORATION, New York, N. Y.
Filed Jan. 15, 1948, Serial No. 547,175. Published Jan. 18, 1949. Class 11.

509,722. PRINTING INK. SUN CHEMICAL CORPORATION, New York, N. Y.
Filed Jan. 15, 1948, Serial No. 547,176. Published Jan. 18, 1949. Class 11.

509,723. PRINTING INK. SUN CHEMICAL CORPORATION, New York, N. Y.
Filed Jan. 15, 1948, Serial No. 547,184. Published Jan. 18, 1949. Class 11.

509,724. PRINTING INK. SUN CHEMICAL CORPORATION, New York, N. Y.
Filed Jan. 15, 1948, Serial No. 547,185. Published Jan. 18, 1949. Class 11.

509,725. PRINTING INK. SUN CHEMICAL CORPORATION, New York, N. Y.
Filed Jan. 15, 1948, Serial No. 547,188. Published Jan. 18, 1949. Class 11.

509,726. LIGHTER FLUID. UNIVERSAL CHEMICAL CORPORATION, Easthampton, Mass.
Filed Jan. 16, 1948, Serial No. 547,296. Published Jan. 11, 1949. Class 6.

509,727. LAXATIVE. C. J. MOFFETT MEDICINE COMPANY, Columbus, Ga.
Filed Jan. 19, 1948, Serial No. 547,474. Published Jan. 25, 1949. Class 6.

509,728 OVARIAN EXTRACT FOR USE IN OBSTETRICS. THE MALTINE COMPANY, New York, N. Y.
Filed Jan. 21, 1948, Serial No. 547,641. Published Nov. 23, 1948. Class 6.

509,729. OVARIAN EXTRACT FOR USE IN OBSTETRICS. THE MALTINE COMPANY, New York, N. Y.
Filed Jan. 21, 1948, Serial No. 547,642. Published Nov. 23, 1948. Class 6.

509,730. BABY CARRIAGES, BABY STROLLERS. WERNER P. KUONI, Long Island City, N. Y.
Filed Jan. 22, 1948, Serial No. 547,735. Published Jan. 4, 1949. Class 19.

509,731. SIZING FOR PAPER AND TEXTILES. MONSANTO CHEMICAL COMPANY, Seattle, Wash.
Filed Jan. 23, 1948, Serial No. 547,863. Published Jan. 4, 1949. Class 6.

509,732. BUILT-IN SEAT CUSHIONS OF FOAM RUBBER FOR AUTOMOBILES. UNITED STATES RUBBER COMPANY, New York, N. Y.
Filed Jan. 23, 1948, Serial No. 548,200. Published Jan. 4, 1949. Class 19.

509,733. BUBBLE BATH, BATH (BOUDOIR) POWDER, DUSTING POWDER, AND PERFUME. DAGGETT & RAMSDELL, New York, N. Y., assignor to Daggett and Ramsdell, Inc., New York, N. Y., a corporation of Delaware.
Filed Feb. 9, 1948, Serial No. 549,182. Published Dec. 7, 1948. Class 6.

509,734. INSECTICIDAL CHEMICAL. JOHN T. BERDAN, doing business as Drought Products, La Mirada, Calif.
Filed Feb. 9, 1948, Serial No. 549,138. Published Jan. 18, 1949. Class 6.

509,735. ANTI-BIOTIC PREPARATION. PARKE, DAVIS & COMPANY, Detroit, Mich.
Filed Feb. 9, 1948, Serial No. 549,167. Published July 20, 1948. Class 6.

509,736. FERTILIZER. TENNESSEE CORPORATION, New York, N. Y.
Filed Feb. 9, 1948, Serial No. 549,193. Published Aug. 24, 1946. Class 10.

509,737. MAILING ENVELOPES. QUALITY PAEK ENVELOPE COMPANY, St. Paul, Minn.
Filed Nov. 5, 1947, Serial No. 549,334. Published Jan. 4, 1949. Class 37.

509,738. MEDICINAL PREPARATION FOR USE IN THE TREATMENT OF PNEUMOCOCCIC, STREPTOCOCCIC, MENINGOCOCCIC, AND STAPHYLOCOCCIC INFECTIONS, SCARLET FEVER, RHEUMATIC FEVER, ERYSIPELAS, OTITIS MEDIA, TONSILLITIS, URINARY INFECTIONS DUE TO E. COLI, STAPHYLOCOCCUS ALBUS, PROTEUS, AND PSEUDOMONAS. MICHAEL A. MAFFEY, doing business as The Mara Laboratories, East Newark, N. J.
Filed Feb. 14, 1948, Serial No. 549,740. Published Jan. 18, 1949. Class 6.

509,739. MEDICINAL PREPARATION POSSESSING HEALING PROPERTIES AND BEING A HEALING PREPARATION FOR INJURIES AND ACUTE AND CHRONIC INFLAMMATORY AFFECTIONS, AND ALSO FOR A MEDICATED RUB. THE DENVER CHEMICAL MANUFACTURING COMPANY, New York, N. Y.
Filed Feb. 18, 1948, Serial No. 550,031. Published Dec. 28, 1948. Class 6.

509,740. FACE POWDER AND POWDER BASES—NAMELY, LIQUID POWDER FOUNDATION, FOUNDATION CREAMS, NIGHT CREAMS; CLEANSING CREAMS—NAMELY, MILKY LIQUID CLEANSER; EYE CREAMS—NAMELY, EYE LASH OIL, FACE LOTIONS, AND FACE CREAMS. GEORGE A. LAWRENCE, New York, N. Y.
Filed Feb. 19, 1948, Serial No. 550,156. Published Dec. 21, 1948. Class 6.

509,741. PROTEIN, CARBOHYDRATE PREPARATION CONTAINING LIVER, MINERALS, AND VITAMINS. SHARP & DOHME, INCORPORATED, Philadelphia, Pa.
Filed Feb. 19, 1948, Serial No. 550,176. Published Jan. 11, 1949. Class 6.

509,742. PROTEIN, CARBOHYDRATE PREPARATION CONTAINING LIVER, MINERALS, AND VITAMINS. SHARP & DOHME, INCORPORATED, Philadelphia, Pa.
Filed Feb. 19, 1948, Serial No. 550,177. Published Jan. 11, 1949. Class 6.

509,743. INSECT REPELLENTS. WARNER F. WILHELM, doing business as D-String Co., Chicago, Ill.
Filed Feb. 19, 1948, Serial No. 550,190. Published Jan. 18, 1949. Class 6.

509,744. COSMETICS—NAMELY, BATH POWDERS, TALCUM POWDERS, CLEANSING CREAMS, COLD CREAMS, FINISHING CREAMS, FOUNDATION CREAMS, ETC. REXALL DRUG COMPANY, doing business as Lorie, Los Angeles, Calif.
Filed Feb. 20, 1948, Serial No. 550,280. Published Dec. 28, 1948. Class 6.

509,745. LIPSTICKS, EYEBROW PENCILS, MASCARA, EYESHADOW, EYELID CREAM AND EYE LOTION, CREAM ROUGE, FACE POWDER, CREAM POWDER BASE, ALL-PURPOSE CREAM, NIGHT CREAM, ETC. BEAUTYMASTERS OF BEVERLY HILLS, INC., Milwaukee, Wis.
Filed Feb. 21, 1948, Serial No. 550,294. Published Jan. 18, 1949. Class 6.

509,746. GROUP A—WATER SOFTENER SALTS OF THE BASE EXCHANGE TYPE, ETC. SEARS, ROEBUCK AND CO., Chicago, Ill.
Filed Feb. 24, 1948, Serial No. 550,443. Published Feb. 1, 1949. Class 6.

509,747. CHEMOTHERAPEUTIC AGENT FOR USE IN THE TREATMENT OF MYCO-BACTERIAL DISEASES. PARKE, DAVIS & COMPANY, Detroit, Mich.
Filed Mar. 1, 1948, Serial No. 550,930. Published Jan. 11, 1949. Class 6.

509,748. LINIMENT. OLD 97 COMPANY, Tampa, Fla.
Filed Mar. 2, 1948, Serial No. 551,041. Published Jan. 11, 1949. Class 6.

509,749. MEDICINAL PREPARATION FOR THE TREATMENT OF NUTRITIONAL DEFICIENCIES AND DISORDERS. THE UPJOHN COMPANY, Kalamazoo, Mich.
Filed Mar. 2, 1948, Serial No. 551,065. Published Feb. 1, 1949. Class 6.

509,750. FERTILIZERS. EASTERN STATES FARMERS' EXCHANGE, West Springfield, Mass.
Filed Mar. 5, 1948, Serial No. 551,253. Published Feb. 1, 1949. Class 10.

509,751. DISINFECTANTS, INSECTICIDES, FUNGICIDES, AND BACTERICIDES; INSECT AND ANIMAL REPELLENTS; ETC. EASTERN STATES FARMERS' EXCHANGE, West Springfield, Mass.
Filed Mar. 5, 1948, Serial No. 551,259. Published Jan. 25, 1949. Class 6.

509,752. FERTILIZERS. EASTERN STATES FARMERS' EXCHANGE, West Springfield, Mass.
Filed Mar. 5, 1948, Serial No. 551,260. Published Dec. 14, 1948. Class 10.

509,753. PERFUMES, TOILET WATER, COLOGNE, FACE POWDER, LIPSTICK, ROUGE, MASCARA, EYE SHADOW, CREAM FOR FACE AND SKIN, AND TALCUM POWDER. BENARD & HONNORAT, doing business as Molinard, Grasse, France.
Filed Mar. 6, 1948, Serial No. 551,357. Published Nov. 30, 1948. Class 6.

509,754. PREPARATION FOR USE AS AN EXPECTORANT AND FOR RELIEVING COUGHS, COLDS, AND BRONCHIAL IRRITATIONS. HY-PURE LABORATORIES, INC., Cincinnati, Ohio.
Filed Mar. 8, 1948, Serial No. 551,457. Published Nov. 30, 1948. Class 6.

509,755. FERTILIZERS. GORDON CALLBECK, Denver, Colo.
Filed Mar. 13, 1948, Serial No. 551,852. Published Feb. 1, 1949. Class 10.

509,756. MAGAZINE AND FOR PRINTED CHARTS, GRAPHS, AND TABULATIONS OF BUSINESS INFORMATION. DUN & BRADSTREET, INC., New York, N. Y.
Filed Mar. 13, 1948, Serial No. 551,874. Published Jan. 18, 1949. Class 38.

509,757. MAGAZINE. DUN & BRADSTREET, INC., New York, N. Y.
Filed Mar. 13, 1948, Serial No. 551,875. Published Jan. 18, 1949. Class 38.

509,758. AIR DEFLECTOR FOR THE DOORS OR WINDOWS OF AUTOMOTIVE VEHICLES. BLAKE MANUFACTURING CO., Pawhuska, Okla.
Filed Mar. 22, 1948, Serial No. 552,632. Published Oct. 5, 1948. Class 19.

509,759. TOOTHPICKS. CLOVER FARM STORES CORPORATION, Cleveland, Ohio.
Filed Mar. 26, 1948, Serial No. 553,075. Published Jan. 18, 1949. Class 44.

509,760. PROPHENPYRAMINE USED IN THE TREATMENT OF ASTHMA, HAYFEVER, URTICARIA, AND OTHER ALLERGIC MANIFESTATIONS. SCHERING CORPORATION, Bloomfield, N. J.
Filed Mar. 26, 1948, Serial No. 553,134. Published Jan. 11, 1949. Class 6.

509,761. PREPARATIONS FOR THE TREATMENT OF DISEASES PECULIAR TO WOMEN. S. B. LEONARDI & CO. INC., New Rochelle, N. Y.
Filed Mar. 31, 1948, Serial No. 553,496. Published Jan. 11, 1949. Class 6.

509,762. VAGINAL HYGIENE POWDER. OPTIMUS PHARMACEUTICALS CO., INC., Taylors, S. C.
Filed Apr. 5, 1948, Serial No. 553,895. Published Jan. 18, 1949. Class 6.

509,763. INK ROLLS FOR MARKING MACHINES. MARKEM MACHINE COMPANY, Keene, N. H.
Filed Apr. 6, 1948, Serial No. 553,967. Published Jan. 18, 1949. Class 11.

509,764. FOR COMBINED DOUCHE AND ENEMA APPLICATOR. ROYCEMORE TOILETRIES, INC., Chicago, Ill.
Filed Apr. 6, 1948, Serial No. 553,986. Published Jan. 25, 1949. Class 44.

509,765. MEDICINAL PREPARATION USED IN THE TREATMENT OF NUTRITIONAL ANEMIA. MARVIN R. THOMPSON, INC., Stamford, Conn.
Filed Dec. 5, 1947, Serial No. 554,063. Published Jan. 18, 1949. Class 6.

509,766. PHARMACEUTICAL PREPARATIONS FOR USE IN AILMENTS OF THE LIVER, ETC. ARNOLD PALM, doing business as Palm Pharmacal Co., New York, N. Y.
Filed Apr. 8, 1948, Serial No. 554,147. Published Jan. 18, 1949. Class 6.

509,767. CARTRIDGES AND SHOTGUN SHELLS. FEDERAL CARTRIDGE CORPORATION, Minneapolis, Minn.
Filed Apr. 9, 1948, Serial No. 554,221. Published Feb. 1, 1949. Class 9.

509,768. PADS AND PLASTERS FOR CORNS, BUNIONS, AND CALLI. THE SCHOLL MFG. CO., INC., Chicago, Ill.
Filed Apr. 12, 1948, Serial No. 554,425. Published Jan. 25, 1949. Class 44.

509,769. SUPER PHOSPHATE FERTILIZER. STAUFFER CHEMICAL COMPANY, San Francisco, Calif.
Filed Apr. 12, 1948, Serial No. 554,435. Published Jan. 18, 1949. Class 10.

509,770. AQUEOUS SULFURIC ACID SOLUTIONS FOR APPLICATION TO TURPENTINE FACES (I. E. THE SLASHES IN THE BARK OF THE TRUNKS OF TURPENTINE PRODUCING TREES) TO INCREASE THE TURPENTINE FLOW FROM THE TREE. ALLIED CHEMICAL & DYE CORPORATION, New York, N. Y.
Filed Apr. 13, 1948, Serial No. 554,460. Published Jan. 18, 1949. Class 6.

509,771. ZINC OXIDE HAVING A GENERAL UTILITY IN THE INDUSTRIAL ARTS, PARTICULARLY IN COMPOUNDING RUBBER AND IN THE PRODUCTION OF ZINC YELLOW, ZINC SULFATE, AND ZINC CYANIDE SOLUTIONS. THE NEW JERSEY ZINC COMPANY, New York, N. Y.
Filed Apr. 15, 1948, Serial No. 554,690. Published Jan. 18, 1949. Class 6.

509,772. PIGMENTS FOR USE IN COLORING INKS. REICHHOLD CHEMICALS, INC., Detroit, Mich.
Filed Apr. 15, 1948, Serial No. 554,705. Published Jan. 18, 1949. Class 11.

509,773. WIRE, HOT ROLLED RODS, HOOPS, AND BANDS AND SHEETS OF STEEL. SOULE STEEL COMPANY, San Francisco and Los Angeles, Calif., Portland, Oreg., and Houston, Tex.
Filed Apr. 16, 1948, Serial No. 554,822. Published Jan. 11, 1949. Class 14.

509,774. ANALGESIC AND SEDATIVE IN TABLET FORM FOR HUMAN USE. WALTER A. FANSLER, doing business as Fuller Pharmaceutical Company, Minneapolis, Minn.
Filed Apr. 23, 1948, Serial No. 555,399. Published Jan. 18, 1949. Class 6.

509,775. METAL CASTINGS. AMERICAN CAR AND FOUNDRY COMPANY, New York, N. Y.
Filed Apr. 27, 1948, Serial No. 555,646. Published Feb. 1, 1949. Class 14.

509,776. AGE-HARDENABLE, CORROSION-RESISTANT, HIGH-NICKEL ALLOYS. THE INTERNATIONAL NICKEL COMPANY, INC., New York, N. Y.
Filed Apr. 27, 1948, Serial No. 555,676. Published Jan. 11, 1949. Class 14.

509,777. WELDING WIRE AND METALLIC WELDING ELECTRODES. THE LINCOLN ELECTRIC COMPANY, Cleveland, Ohio.
Filed May 14, 1948, Serial No. 557,050. Published Jan. 18, 1949. Class 14.

509,778. FERROUS ALLOY METALS. SHOFNER IRON AND STEEL WORKS, Portland, Oreg.
Filed May 25, 1948, Serial No. 557,781. Published Feb. 1, 1949. Class 14.

509,779. HAND LOTION. WELCH INDUSTRIES, INCORPORATED, Colorado Springs, Colo.
Filed May 26, 1948, Serial No. 557,880. Published Feb. 1, 1949. Class 6.

509,780. LIQUIFIED PETROLEUM GASES. GREEN'S FUEL, INC., Sarasota, Fla.
Filed June 7, 1948, Serial No. 558,650. Published Jan. 18, 1949. Class 6.

509,781. PNEUMATIC TIRES AND AIR TUBES. MANUFACTURE DE CAOUTCHOCC MICHELIN (PUISEUX, BOULANGER ET CIE), Clermont-Ferrand (Puy de-Dome), France.
Filed June 9, 1948, Serial No. 558,799. Published Feb. 1, 1949. Class 35.

509,782. MINERAL FERTILIZER. SARATOGA LABORATORIES INC., New York and Saratoga Springs, N. Y.
Filed June 9, 1948, Serial No. 558,814. Published Nov. 30, 1948. Class 10.

509,783. INSECTICIDE. WESTTACO CHEMICAL CORPORATION, New York, N. Y., now by merger Food Machinery and Chemical Corporation, New York, N. Y., a corporation of Delaware.
Filed June 10, 1948, Serial No. 558,975. Published Jan. 18, 1949. Class 6.

509,784. FILLING AGENT USEFUL IN THE MANUFACTURE OF LEATHER FROM HIDES AND SKINS CONSISTING OF A LIGNIN PITCH WHICH IS DERIVED FROM THE SULFITE PROCESS OF MAKING WOOD PULP. AMERICAN GUM PRODUCTS COMPANY, New York, N. Y.
Filed June 11, 1948, Serial No. 558,985. Published Jan. 18, 1949. Class 6.

509,785. PROTEINIC PREPARATION USEFUL IN THE TREATMENT AND PREVENTION OF METABOLIC DEFICIENSIES. SHARP & DOHME, INCORPORATED, Philadelphia, Pa.
Filed June 19, 1948, Serial No. 559,737. Published Jan. 18, 1949. Class 6.

509,786. CHEMICAL SOLUTIONS FOR THE PREVENTION OF CORROSION OF METAL AND ALLOYS AND FOR BONDING PAINT AND LACQUERS TO METAL SURFACES. THE WALTERISATION COMPANY LIMITED, Croydon, Surrey, England.
Filed June 22, 1948, Serial No. 559,968. Published Jan. 18, 1949. Class 6.

509,787. MEDICINAL PREPARATION FOR USE IN THE SYMPTOMATIC RELIEF OF BRONCHIAL ASTHMA AND HAY FEVER. CORTUNON CO., INC., New York, N. Y.
Filed June 23, 1948, Serial No. 559,995. Published Feb. 1, 1949. Class 6.

509,788. LAXATIVES. ALEXANDER M. LECCAS, Jersey City, N. J.
Filed June 23, 1948, Serial No. 560,028. Published Jan. 18, 1949. Class 6.

509,789. VISCOUS LIGHT BROWN, SELF-EMULSIFIABLE LUBRICATING PASTE USED FOR LUBRICATING THE DIE AND TO PREVENT METAL TO METAL CONTACT IN DRAWING STEEL AND ALLOYS. HAAS-MILLER CORPORATION, Philadelphia, Pa.
Filed June 24, 1948, Serial No. 560,103. Published Jan. 18, 1949. Class 6.

509,790. OLEAGINOUS MATERIAL APPLIED STRAIGHT OR IN ADMIXTURE WITH WATER TO METAL SURFACES FOR PURPOSES OF PROTECTING METAL AGAINST RUSTING. HAAS-MILLER CORPORATION, Philadelphia, Pa.
Filed June 24, 1948, Serial No. 560,107. Published Feb. 1, 1949. Class 6.

509,791. OINTMENT PREPARATIONS. WALTER PIERSCHALSKI, doing business as Greenbrook Chemical Co., Manville, N. J.
Filed June 25, 1948, Serial No. 560,216. Published Feb. 1, 1949. Class 6.

509,792. CHOLESTEROL-LANOSTEROL. ROBINSON-WAGNER CO. INC., New York, N. Y.
Filed June 26, 1948, Serial No. 560,293. Published Feb. 1, 1949. Class 6.

509,793. TRANSMISSION BELTING. SLIP-NOT BELTING CORPORATION, Kingsport, Tenn.
Filed July 28, 1948, Serial No. 562,410. Published Feb. 1, 1949. Class 35.

509,794. SPECIFIC PREPARATIONS DESIGNED FOR THE ORAL TREATMENT OF THOSE SYPMTOMS SUCH AS RHINITIS, SINUSITIS, URTICARIA, STOMACH AND INTESTINAL DISTURBANCES RESULTING FROM THE SENSITIVITY OR ALLERGY OF CERTAIN INDIVIDUALS AND ANIMALS TO A SPECIFIC FOOD, POLLEN, DUST, WOOL, HAIR OR OTHER MATERIAL. DALARE ASSOCIATES, Philadelphia, Pa.
Filed Apr. 23, 1948, Serial No. 564,022. Published Jan. 25, 1949. Class 6.

509,795. ROUND LEATHER BELTING MADE OF STEERHIDE. WESTERN RAWHIDE & BELTING COMPANY, Milwaukee, Wis.
Filed May 3, 1948, Serial No. 564,032. Published Feb. 1, 1949. Class 35.

509,796. VETERINARY ANTISEPTIC. CUTTER LABORATORIES, Berkeley, Calif.
Filed June 11, 1948, Serial No. 564,061. Published Jan. 18, 1949. Class 6.

Service Marks

509,797. WATER TRANSPORTATION OF CARGO AND PASSENGERS. PACIFIC MAIL STEAMSHIP COMPANY, San Francisco, Calif.
Filed July 5, 1947, Serial No. 527,392. Published Jan. 25, 1949. Class 55.

CLASS 19

VEHICLES

Reg. No. 32,036. Registered Oct. 4, 1898. UNION PACIFIC RAILROAD COMPANY, Omaha, Nebr., a corporation of Utah. Republished by registrant.

UNION PACIFIC THE OVERLAND ROUTE

FOR RAILWAY FREIGHT AND PASSENGER CARS.
Claims use since 1889.

Reg. No. 140,527. Registered Mar. 15, 1921. RELIANCE TRAILER & TRUCK CO. INC., San Francisco, Calif., a corporation of California. Republished by registrant.

RELIANCE

FOR TRAILERS.
Claims use since Oct. 1, 1916.

Reg. No. 401,353. Registered May 11, 1943. GUARDIAN ELECTRIC MANUFACTURING CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

G

FOR CONTROL HANDLES FOR AIRCRAFT INCLUDING ELECTRICAL SWITCHES DIRECTLY CARRIED THEREBY, AND FOR CONTROL WHEELS FOR AIRCRAFT INCLUDING ELECTRICAL SWITCHES DIRECTLY CARRIED THEREON.
Claims use since at least as early as Dec. 30, 1940.

Reg. No. 405,300. Registered Jan. 18, 1944. HIGGINS INDUSTRIES, INC., New Orleans, La., a corporation of Louisiana. Republished by registrant.

COMMANDO

FOR SURF LANDING MOTOR BOATS.
Claims use since Jan. 1, 1942.

Reg. No. 405,601. Registered Feb. 8, 1944. HIGGINS INDUSTRIES, INC., New Orleans, La., a corporation of Louisiana. Republished by registrant.

RANGER

FOR SHALLOW DRAFT MOTOR BOATS.
Claims use since Jan. 1, 1942.

Reg. No. 420,027. Registered Mar. 19, 1946. HIGGINS INDUSTRIES, INC., New Orleans, La., a corporation of Louisiana. Republished by registrant.

INVADER

FOR MOTOR BOATS.
Claims use since March 1945.

Reg. No. 438,384. Registered Apr. 20, 1948. JOHN N. GLADDEN, Glendale, Calif. Republished by registrant.

Mustang

FOR MOTORCYCLES.
Claims use since Aug. 9, 1945.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 277,908. Registered Dec. 2, 1930. SPRAGUE SPECIALTIES COMPANY, Quincy, Mass. Republished by Sprague Electric Company, North Adams, Mass., a corporation of Massachusetts.

MIDGET

FOR ELECTRIC CONDENSERS.
Claims use since Dec. 9, 1926.

Reg. No. 349,228. Registered Aug. 24, 1937. GUARDIAN ELECTRIC MANUFACTURING CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

G

FOR ELECTRICAL CONTROL EQUIPMENT—NAMELY, PROTECTIVE AND SIGNALING DEVICES, SUCH AS BURGLAR AND FIRE ALARMS, AND ANNUNCIATOR, AND FARM LIGHTING CONTROL SYSTEMS—RELAYS OF ALL TYPES SUCH AS STEPPING, KEYING, BREAK-IN, CONTROL, AND MULTIPOLE—SWITCHES, SUCH AS AUTOMATIC, MECHANICAL, MANUAL, AND ELECTRICAL—FUSES, SOLENOIDS, AUTOMATIC ROTARY CONTACTORS, SPINNERS, AND ODD SELECTOR UNITS FOR PIN GAME MACHINES, TIME DELAY UNITS, PUSH BUTTONS, JACKS, STEPPING SWITCHES, ELECTROMAGNETS, CIRCUIT BREAKERS, FLASHERS, AND SOCKETS.
Claims use since Oct. 12, 1936.

Reg. No. 368,723. Registered June 27, 1939. NORTH AMERICAN ELECTRIC LAMP COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

DRITHERM

FOR ELECTRIC LAMPS.
Claims use since Feb. 1, 1939.

Reg. No. 378,302. Registered June 4, 1940. LANDON P. SMITH, INC., Irvington, N. J. Republished by Red Devil Tools, Irvington, N. J., a corporation of New Jersey.

Red Devil

FOR APPARATUS FOR CONTROLLING THE ELECTRIFICATION OF FENCES, AND PARTS THEREFOR.
Claims use since Oct. 1, 1939.

Reg. No. 400,523. Registered Mar. 16, 1943. GUARDIAN ELECTRIC MANUFACTURING CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

G

FOR SOLENOID CONTACTORS, RADIO RELAYS, ELECTRIC CIRCUIT ADAPTER PLUGS, ELECTRIC SOCKETS FOR MICROPHONES AND CAMERAS; ELECTRICAL CIRCUIT BOMB BOX ADAPTERS; CONTROL STICK SWITCH FOR REMOTE CONTROL OF AIRCRAFT ELECTRICAL CONTROLS; ELECTRIC CONTROLS FOR GUN TURRETS; ELECTRIC MECHANISMS FOR BOMB DROPPING, AND ELECTRIC MECHANISMS FOR REMOTE GUN FIRING.
Claims use since at least as early Nov. 30, 1940.

Reg. No. 401,353. Registered May 11, 1943. GUARDIAN ELECTRIC MANUFACTURING CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

G

FOR CONTROL HANDLES FOR AIRCRAFT INCLUDING ELECTRICAL SWITCHES DIRECTLY CARRIED THEREBY, AND FOR CONTROL WHEELS FOR AIRCRAFT INCLUDING ELECTRICAL SWITCHES DIRECTLY CARRIED THEREON.
Claims use since at least as early as Dec. 30, 1940.

Reg. No. 402,614. Registered Aug. 3, 1943. SPRAGUE SPECIALTIES COMPANY, North Adams, Mass. Republished by Sprague Electric Company, North Adams, Mass., a corporation of Massachusetts.

VITAMIN Q

FOR ELECTRICAL CONDENSERS.
Claims use since June 13, 1942.

Reg. No. 404,943. Registered Dec. 28, 1943. SPRAGUE SPECIALTIES COMPANY, North Adams, Mass. Republished by Sprague Electric Company, North Adams, Mass., a corporation of Massachusetts.

CERON

FOR ELECTRICAL CONDUCTORS.
Claims use since Aug. 9, 1943.

Reg. No. 405,510. Registered Feb. 1, 1944. SPRAGUE SPECIALTIES COMPANY, North Adams, Mass. Republished by Sprague Electric Company, North Adams, Mass., a corporation of Massachusetts.

PROKAR

FOR ELECTRICAL CONDENSERS.
Claims use since Aug. 5, 1943.

Reg. No. 420,203. Registered Apr. 2, 1946. SPRAGUE ELECTRIC COMPANY, North Adams, Mass., a corporation of Massachusetts. Republished by registrant.

CEROC

FOR ELECTRICAL INSULATION COMPOSED OF CERAMIC PARTICLES.
Claims use since Aug. 9, 1943.

Reg. No. 436,635. Registered Feb. 17, 1948. NATHANIEL B. BIBOR, Sherman, Tex. Republished by registrant.

SLUMBERSWITCH

FOR ELECTRICAL SWITCHES.
Claims use since June 21, 1946.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 217,440. Registered Aug. 31, 1926. UNITED STATES WHIP COMPANY, doing business as U. S. Line Company, Westfield, Mass., a corporation of Maine. Republished by registrant.

FOR FISHING LINES.
Claims use since Aug. 1, 1923.

Reg. No. 261,849. Registered Sept. 24, 1929. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Wilmington, Del., and Chicago, Ill., a corporation of Delaware. Republished by registrant, present address Chicago, Ill.

IVORYLENE

FOR BILLIARD BALLS.
Claims use since Feb. 1, 1916.

Reg. No. 286,966. Registered Sept. 8, 1931. ALL METAL PRODUCTS COMPANY, Wyandotte, Mich., a corporation of Delaware. Republished by registrant.

"WYANDOTTE TOYS"

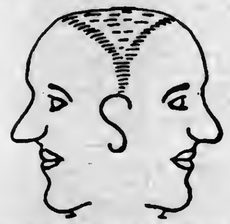
No claim is made to the word "Toys" except in the association shown on the drawing.
FOR POP GUNS, AIR RIFLES, TOY AIRPLANES, TOY TRUCKS, AND TOY AUTOMOBILES.
Claims use since December 1929.

Reg. No. 296,835. Registered Aug. 23, 1932. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Wilmington, Del., and Chicago, Ill., a corporation of Delaware. Republished by registrant, present address Chicago, Ill.

DIAMOND

FOR BILLIARD CUE TIPS.
Claims use since Jan. 1, 1924.

Reg. No. 421,828. Registered June 18, 1946. THE PAUL BUNYAN BAIT COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.



FLASH-EYE

The word "Flash" is disclaimed apart from the mark as shown.
FOR FISHING SPOONS.
Claims use since April 1939.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 227,072. Registered Apr. 26, 1927. EDWARD ELWELL LTD., Wednesbury, England, a British Company. Republished by registrant.

FOR METAL SHOVELS, PICKS, HOES, AXES, ADZES, HATCHETS, CHISELS, DRAWING KNIVES, MEAT CHOPPERS, CLEAVERS, SUGAR-CANE BILLS AND HOOKS, HAMMERS, PICK AXES, CROW AND OTHER BARS, SPADES, RAKES, TROWELS, AND FORKS, AND SHIP SCRAPERS, SERPETTES, CUTLASSES, AND SICKLES.
Claims use since July 29, 1910.

Reg. No. 234,938. Registered Nov. 8, 1927. PACIFIC MARINE SUPPLY COMPANY, Seattle, Wash., a corporation of Washington. Republished by registrant.

THE PACIFIC PUMPER

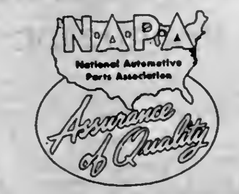
The words "The" and "Pumper" are disclaimed apart from the mark as shown.
FOR FOREST-FIRE PUMPS.
Claims use since about Jan. 1, 1925.

Reg. No. 264,337. Registered Nov. 26, 1929. ELLICOTT MACHINE CORPORATION, Baltimore, Md., a corporation of Maryland. Republished by registrant.

The representation of a dredge per se is disclaimed apart from the mark as shown.
FOR DREDGING PUMPS AND DREDGING MACHINERY COMPRISING HYDRAULIC DREDGES, ELEVATOR-TYPE SAND AND GRAVEL DREDGES, GRAPPLE DREDGES, DIPPER DREDGES, DREDGING PUMPS, AGITATING LADDERS FOR DREDGES, HAULING AND HOISTING MACHINERY FOR DREDGES, RELAY PUMPS FOR DREDGES, AND PUMPING MACHINERY FOR DREDGES.
Claims use since Apr. 12, 1929.

Reg. No. 329,598. Registered Nov. 5, 1935. SPECIAL EQUIPMENT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant, present address Park Ridge, Ill.

SPECO



FOR CONVEYORS AND DRIERS FOR PROCESSING LEATHER, TANNERS, PASTING PLATES, TANNERS TOGGLING UNITS, AND SUPPORTS FOR SUPPORTING MOUNTED PIECES OF LEATHER ON A CONVEYOR.
Claims use since Mar. 1, 1933.

Reg. No. 362,712. Registered Nov. 29, 1938. THE CUSHMAN MOTOR WORKS, Lincoln, Nebr. Republished by Cushman Motor Works, Inc., Lincoln, Nebr., a corporation of Nebraska.

All wording appearing on the drawing, except "Cubs" and the corporate name, is disclaimed apart from the mark as shown.
FOR INTERNAL COMBUSTION ENGINES AND STRUCTURAL PARTS THEREOF.
Claims use since Nov. 12, 1927.

Reg. No. 389,980. Registered Sept. 2, 1941. NATIONAL AUTOMOTIVE PARTS ASSOCIATION, Detroit, Mich., a corporation of Michigan. Republished by registrant.

The words "Assurance of Quality" and the representation of the outline map of the United States are disclaimed apart from the mark as shown.
FOR AUTOMOTIVE GEARS INCLUDING DRIVE GEARS AND PINIONS, FLYWHEEL GEARS, TRANSMISSION GEARS, METAL AND NON-METAL TIMING GEARS, OIL PUMP AND IGNITER GEARS, GEAR ADJUSTMENT SHIMS, AUTOMOTIVE AXLE SHAFTS, AUTOMOTIVE TRANSMISSIONS INCLUDING TRANSMISSION SHAFTS AND TRANSMISSION PARTS, UNIVERSAL JOINTS INCLUDING UNIVERSAL JOINT DISCS, AUTOMOTIVE CLUTCHES INCLUDING CLUTCH PLATES, PRESSURE PLATES, CLUTCH FORKS, CLUTCH PARTS, BOLTS AND BUSHINGS, AND CLUTCH REBUILDING MACHINES, AUTOMOTIVE PUMPS INCLUDING OIL PUMPS, FUEL PUMPS, VACUUM PUMPS, WATER PUMPS, PUMP PARTS AND PUMP DISCS, AUTOMOTIVE VALVES INCLUDING VALVE GUIDES, VALVE SPRINGS, VALVE STEM KEYS AND WASHERS, VALVE SEAT INSERTS, AUTOMOTIVE TIMING CHAINS, AUTOMOTIVE MUFFLERS INCLUDING EXHAUST AND TAIL PIPES, AUTOMOTIVE BEARINGS INCLUDING ROLLER BEARINGS, MOTOR BEARINGS, ANNULAR BALL BEARINGS SINGLE AND DOUBLE ROW, ANGULAR CONTACT AND SELF-ALIGNING BEARINGS, FRONT WHEEL BEARINGS, CLUTCH THROW-OUT BEARINGS, MAGNETO BEARINGS, AIRCRAFT BEARINGS, AUTOMOTIVE DIFFERENTIAL CASES AND PARTS, AUTOMOTIVE BUSHINGS INCLUDING PISTON PIN AND BOSS BUSHINGS, CYLINDER SLEEVES, AUTOMOTIVE PISTONS INCLUDING PISTON PINS, PIN LOCKS, AUTOMOTIVE VACUUM FANS; WRENCHES INCLUDING SOCKET, OPEN END, BOX END WRENCHES, SOCKET WRENCH END ATTACHMENTS, EXTENSION HANDLES FOR WRENCHES AND RATCHET HANDLES FOR WRENCHES, SCREW DRIVERS, HAMMERS, PLIERS, CHISELS, AND PUNCHES.
Claims use since about Apr. 1, 1940.

Reg. No. 438,776. Registered May 11, 1948. PRACTICAL PRODUCTS COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

Carb-u-tator

The prefix "Carb" is disclaimed apart from the mark as shown.
FOR APPARATUS FOR WASHING MECHANICAL PARTS CONSISTING OF A CABINET CONTAINING THE PARTS TO BE WASHED AND A SOLVENT WHICH IS AGITATED BY MEANS OF COMPRESSED AIR FLOWING THERETHROUGH.
Claim use since Apr. 22, 1943.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 372,939. Registered Nov. 21, 1939. ALEXANDER KONO, doing business as The Kono Manufacturing Company, New York, N. Y. Republished by The Kono Manufacturing Company, Woodside, N. Y., a firm.

KONOPTIC

FOR EYEGLASS AND SPECTACLE FRAMES AND PARTS THEREFOR, INCLUDING NOSEPIECES, TEMPLES, AND THE LIKE, OF METAL, SHELL, AND VARIOUS PLASTIC COMPOSITIONS.
Claims use since Feb. 1, 1938.

Reg. No. 400,185. Registered Sept. 19, 1944. THE KONO MANUFACTURING COMPANY, Woodside, N. Y., a firm. Republished by registrant.

THE CLIPPER

FOR EYEGLASS AND SPECTACLE FRAMES AND PARTS THEREFOR.
Claims use since Apr. 25, 1944.

Reg. No. 411,523. Registered Jan. 23, 1945. ALEXANDER KONO, doing business as Kono Manufacturing Company, Woodside, Long Island, N. Y., assignor to The Kono Manufacturing Company. Republished by The Kono Manufacturing Company, Woodside, N. Y., a firm.

ACE

FOR EYEGLASS AND SPECTACLE FRAMES AND PARTS THEREFOR—NAMELY, NOSEPIECES AND TEMPLES, MADE OF METAL, SHELL, AND VARIOUS PLASTIC COMPOSITIONS.
Claims use since Oct. 1, 1941.

Reg. No. 414,325. Registered June 5, 1945. THE KONO MANUFACTURING COMPANY, Woodside, N. Y., a firm. Republished by registrant.

HUSSY

FOR EYEGLASS AND SPECTACLE FRAMES AND PARTS THEREFOR.
Claims use since Dec. 5, 1944.

Reg. No. 416,919. Registered Oct. 2, 1945. THE KONO MANUFACTURING COMPANY, Woodside, Long Island, N. Y., a firm. Republished by registrant, present address, Woodside, N. Y.

"SUN DODGER"

The word "Sun" is disclaimed apart from the mark as shown.
FOR SUN GLASSES AND PARTS THEREFOR.
Claims use since Apr. 24, 1945.

Reg. No. 428,186. Registered Mar. 11, 1947. THE KONO MANUFACTURING COMPANY, Woodside, N. Y., a firm. Republished by registrant.

PACEMAKER

FOR EYEGLASS AND SPECTACLE FRAMES AND PARTS THEREFOR.
Claims use since Apr. 15, 1946.

Reg. No. 428,529. Registered Mar. 25, 1947. THE KONO MANUFACTURING COMPANY, Woodside, N. Y., a firm. Republished by registrant.

MIDWAY

FOR EYEGLASS AND SPECTACLE FRAMES AND PARTS THEREFOR.
Claims use since Apr. 15, 1946.

Reg. No. 435,854. Registered Jan. 13, 1948. POLLAK MANUFACTURING COMPANY, Arlington, N. J., assignor to Arma Corporation, Brooklyn, N. Y., a corporation of New York. Republished by Arma Corporation, Brooklyn, N. Y., a corporation of New York.

LIMITRON

FOR ELECTRONIC LIMIT COMPARATOR GAUGE, FOR USE IN PRODUCTION AND INSPECTION.
Claims use since May 13, 1946.

Reg. No. 437,989. Registered Apr. 6, 1948. WINFRED S. KAUMEIER, doing business as Krueger Sentry Gauge Co., Green Bay, Wis. Republished by Krueger Sentry Gauge Company, Inc., Green Bay, Wis., a corporation of Wisconsin.

AT-A-GLANCE

FOR LIQUID LEVEL GAUGES.
Claims use since on or about Sept. 23, 1937.

CLASS 27

HOROLOGICAL INSTRUMENTS

Reg. No. 187,774. Registered Aug. 12, 1924. OLSEN & EBANN, Chicago, Ill. Republished by Olsen and Ebann Jewelry Co., Chicago, Ill., a corporation of Illinois.

Olsen & Ebann

FOR OPEN-FACE AND HUNTING-CASE WRIST WATCHES AND POCKET WATCHES.
Claims use since June 1913.

Reg. No. 243,854. Registered July 3, 1928. WILLIAM L. GILBERT CLOCK COMPANY, Winsted, Conn. Republished by The William L. Gilbert Clock Corporation, Winsted, Conn., a corporation of Connecticut.

SILVER KING

FOR CLOCKS.
Claims use since Dec. 28, 1927.

Reg. No. 246,726. Registered Sept. 11, 1928. WILLIAM L. GILBERT CLOCK COMPANY, Winsted, Conn. Republished by The William L. Gilbert Clock Corporation, Winsted, Conn., a corporation of Connecticut.

BROADSIDE

FOR CLOCKS.
Claims use since Apr. 12, 1928.

Reg. No. 398,241. Registered Oct. 20, 1942. KATE DEDO COMPANY, Kansas City, Mo., a corporation of Delaware. Republished by registrant.

NIGHTHAWK

FOR ALARM CLOCKS.
Claims use since on or about Jan. 1, 1939.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 49,860. Registered Feb. 20, 1906. IRONS & RUSSELL, Providence, R. I. Republished by Irons & Russell Company, Providence, R. I., a corporation of Rhode Island.

R

FOR GOLD PLATED BADGES.
Claims use since 1890.

Reg. No. 53,328. Registered Mar. 13, 1906. IRONS & RUSSELL, Providence, R. I. Republished by Irons & Russell Company, Providence, R. I., a corporation of Rhode Island.

FOR SOLID GOLD BADGES.
Claims use since 1890.

Reg. No. 362,290. Registered Nov. 15, 1938. IRONS & RUSSELL COMPANY, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

FOR JEWELRY FOR PERSONAL WEAR OR ADORNMENT, NOT INCLUDING WATCHES.
Claims use since 1870.

Reg. No. 378,425. Registered June 11, 1940. COHN & ROSENBERGER, INC., New York, N. Y. Republished by Coro, Inc., New York, N. Y., a corporation of New York.

"AS YOU LIKE IT"

FOR NECKLACES AND BRACELETS, FINGER RINGS, EARRINGS, JEWELRY CLIPS, BROOCHES, LOCKETS, AND THE FOLLOWING GOODS MADE IN WHOLE OR IN PART OF PRECIOUS METAL OR PLATED WITH THE SAME; BEADS, PINS, HAT ORNAMENTS, CLASPS, HAIR ORNAMENTS, HOLDERS FOR FACE POWDER COMPACTS, COMB CASES, CIGARETTE CASES, FANCY CIGARETTE BOXES, FANCY BUCKLES, AND JEWELRY INITIALS.
Claims use since May 1939.

Reg. No. 407,969. Registered July 11, 1944. CORO, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Chorobreds

FOR NECKLACES, BRACELETS, EARRINGS, JEWELRY CLIPS, BROOCHES, LOCKETS, AND THE FOLLOWING GOODS MADE IN WHOLE OR IN PART OF PRECIOUS METALS OR PLATED WITH THE SAME: BEADS, PINS, HAT ORNAMENTS, HOLDERS FOR FACE POWDER COMPACTS, COMB CASES, FANCY CIGARETTE BOXES, FANCY BUCKLES, AND JEWELRY INITIALS.
Claims use since June 1942.

Reg. No. 426,993. Registered Apr. 15, 1947. CORO, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Coro CRAFT

FOR NECKLACES, BRACELETS, FINGER RINGS, EARRINGS, JEWELRY CLIPS, BROOCHES, LOCKETS, AND THE FOLLOWING GOODS MADE IN WHOLE OR IN PART OF PRECIOUS METALS OR PLATED WITH THE SAME: BEADS, PINS, HAT ORNAMENTS, HOLDERS FOR FACE POWDER COMPACTS, COMB CASES, AND JEWELRY INITIALS.
Claims use since March 1938.

Reg. No. 432,280. Registered Aug. 26, 1947. A. C. BECKEN CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Sea-Island

FOR PEARLS, BOTH CULTURED AND SIMULATED OR ARTIFICIAL.
Claims use since on or about Oct. 23, 1946.

Reg. No. 437,795. Registered Mar. 30, 1948. SPEIDEL CORPORATION, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

MING TAI

FOR BRACELETS (NOT INCLUDING WATCHES).
Claims use since Apr. 4, 1947.

CLASS 32

FURNITURE AND UPHOLSTERY

Reg. No. 336,144. Registered June 30, 1936. CHITTENDEN & EASTMAN COMPANY, Burlington, Iowa, a corporation of Iowa. Republished by registrant.

PERMALUX

FOR UPHOLSTERED FURNITURE—NAMELY, DAVENPORTS, SOFAS, AND CHAIRS, AND BOX SPRINGS.
Claims use since Jan. 2, 1936.

Reg. No. 361,327. Registered Oct. 11, 1938. CHITTENDEN & EASTMAN COMPANY, Burlington, Iowa, a corporation of Iowa. Republished by registrant.

TRANQUILT

FOR MATTRESSES AND BOX SPRINGS.
Claims use since Apr. 11, 1938.

Reg. No. 367,838. Registered May 30, 1939. NACHMAN SPRING-FILLED CORPORATION, Chicago, Ill. Republished by Nachman Corporation, Chicago, Ill., a corporation of Illinois.

Body-Balance

FOR SPRING ASSEMBLIES FOR UPHOLSTERY AND UPHOLSTERY UNITS EQUIPPED WITH SPRING ASSEMBLIES, SUCH AS MATTRESSES AND CUSHIONS.
Claims use since Dec. 1, 1938.

Reg. No. 378,164. Registered May 28, 1940. NACHMAN SPRING-FILLED CORPORATION, Chicago, Ill. Republished by Nachman Corporation, Chicago, Ill., a corporation of Illinois.

ZIGGER

FOR SPRING UNITS FOR ALL SPRING EQUIPPED FURNITURE AND UPHOLSTERY.
Claims use since July 14, 1938.

Reg. No. 409,785. Registered Oct. 24, 1944. NACHMAN SPRING-FILLED CORPORATION, Chicago, Ill., now by change of name Nachman Corporation. Republished by Nachman Corporation, Chicago, Ill., a corporation of Illinois.

CURVIFLEX

FOR SPRING UNITS AND SUPPORTS FOR SEAT CUSHIONS OF SEATING FURNITURE AND FOR UPHOLSTERED FURNITURE.
Claims use since Dec. 4, 1942.

Reg. No. 434,008. Registered Nov. 4, 1947. DAVIS MILLWORK COMPANY, Forty Fort, Pa., a firm. Republished by registrant.

FOR KITCHEN CABINETS.
Claims use since Jan. 1, 1945.

CLASS 33

GLASSWARE

Reg. No. 244,656. Registered July 24, 1928. PITTSBURGH SAFETY GLASS COMPANY, Pittsburgh, Pa. Republished by Pittsburgh Plate Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania.

The rectangular border and the two rectangles inside the border are lined for brown.
FOR LAMINATED SHEET GLASS.
Claims use since Feb. 24, 1928.

Reg. No. 247,212. Registered Sept. 25, 1928. PITTSBURGH PLATE GLASS COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

The words "Vista Plate" and the numeral "⅛" and the two parallel lines below the hands and the outline of the angularly positioned plate are in blue. The wording other than the word "Vista" and the representation of the sheet of glass are disclaimed apart from the mark shown.
FOR PLATE GLASS.
Claims use since May 5, 1928.

CLASS 34

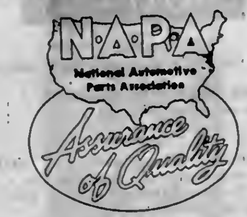
HEATING, LIGHTING, AND VENTILATING APPARATUS

Reg. No. 251,932. Registered Jan. 22, 1929. HOME INCINERATOR COMPANY, Milwaukee, Wis. Republished By McNaulin, Inc., Milwaukee, Wis., a corporation of Wisconsin.

·INCINOR·
THE HOME INCINERATOR
Good Riddance
GARBAGE..RUBBISH TRASH

No claim is made to the words "The Home Incinerator," "Good Riddance," "Garbage," "Rubbish," "Trash," apart from the mark as shown.
FOR DOMESTIC GARBAGE AND REFUSE INCINERATORS.
Claims use since July 21, 1928.

Reg. No. 253,306. Registered Feb. 26, 1929. HOME INCINERATOR COMPANY, Milwaukee, Wis. Republished By McNaulin, Inc., Milwaukee, Wis., a corporation of Wisconsin.



The words "Burn It With Gas" and "The Decent Way" are disclaimed apart from the mark as shown.
FOR DOMESTIC GARBAGE AND REFUSE INCINERATORS.
Claims use since July 21, 1928.

CLASS 35

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Reg. No. 390,101. Registered Sept. 9, 1941. NATIONAL AUTOMOTIVE PARTS ASSOCIATION, Detroit, Mich., a corporation of Michigan. Republished by registrant.

The name "National Automotive Parts Association" and the words "Assurance of Quality" are disclaimed apart from the mark as shown.
FOR BRAKE LINING, CLUTCH FACING, PUMP PACKING, FAN BELTS, RUBBER HOSE, CONNECTIONS, AND RUBBER AND FABRIC HOSE CONNECTIONS.
Claims use since about Apr. 1, 1940.

CLASS 36

MUSICAL INSTRUMENTS AND SUPPLIES

Reg. No. 243,852. Registered July 3, 1928. WILLIAM L. LANGE, New York, N. Y. Republished by The Fred. Gretsch Manufacturing Co., Brooklyn, N. Y., a corporation of New York.

The drawing is lined to indicate blue color.
FOR BANJOS, BANJO UKULELES, BANJO MANDOLINS, MANDOLINS, GUITARS, UKULELES, VIOLINS, VIOLAS, VIOLINCELLOS, DOUBLE BASSES, BANJO HARPS AND STRINGS, TAILPIECES, KEYS AND BRIDGES THEREFOR.
Claims use since May 6, 1926.

CLASS 37

PAPER AND STATIONERY

Reg. No. 70,678. Registered Sept. 22, 1908. STYLES & CASH, New York, N. Y. Republished by Chas. S. Hook, Union City, Ind.

BLACK PRINCE

FOR LEAD-PENCILS.
Claims use since Jan. 2, 1907.

Reg. No. 80,954. Registered Feb. 14, 1911. GEORGE ROWNEY & Co., London, England. Republished by George Rowney & Company Limited, London, England, a corporation of Great Britain.

FOR TRACING PAPER, TRACING-CLOTH, LEAD PENCILS, CRAYONS, MILLBOARDS.
Claims use since Oct. 7, 1905.

Reg. No. 223,819. Registered Feb. 1, 1927. D. & S. TABLET COMPANY, Atlanta, Ga. Republished by Write Right Manufacturing Company, Atlanta, Ga., a corporation of Georgia.

WriteRight

FOR WRITING TABLETS, NOTEBOOKS, COMPOSITION BOOKS, TYPEWRITER PADS, TYPEWRITER PAPER, AND LOOSE CORRESPONDENCE SHEETS IN CARTONS.
Claims use since January 1925.

Reg. No. 246,866. Registered Sept. 18, 1928. GAW-O'HARA ENVELOPE CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

P. D. Q.

FOR ENVELOPES, LETTERHEADS, BILLHEADS, BLANK BOOKS, BLOTTERS, FOLDERS, AND PORTFOLIOS.
Claims use since Jan. 1, 1914.

Reg. No. 310,733. Registered Mar. 6, 1934. RUSHMORE PAPER MILLS INC., Windsor Locks, Conn., and New York, N. Y., a corporation of New York. Republished by registrant, present address Gouverneur, N. Y.

Blue Ribbon

FOR PAPER, PARTICULARLY WAXED PAPER.
Claims use since July 1912.

Reg. No. 436,611. Registered Feb. 17, 1948. WRITE RIGHT MANUFACTURING COMPANY, Atlanta, Ga., a corporation of Georgia. Republished by registrant.

WriteRight

FOR LOOSE-LEAF FILLER PAPER, ENVELOPES; PAPER STATIONERY—NAMELY, WRITING PAPER AND TYPEWRITING PAPER, ADDING MACHINE PAPER, AND RING BINDERS.
Claims use since January 1925.

CLASS 38

PRINTS AND PUBLICATIONS

Reg. No. 105,615. Registered Aug. 10, 1916. STAR COMPANY, New York, N. Y. Republished by The Hearst Corporation, New York, N. Y., a corporation of Delaware.

Bringing Up Father

FOR NEWSPAPER SECTION.
Claims use since Jan. 2, 1913.

Reg. No. 124,102. Registered Jan. 14, 1919. INTERNATIONAL MAGAZINE COMPANY, New York, N. Y. Republished by Hearst Magazines Inc., New York, N. Y., a corporation of Delaware.

SCIENTIFIC MECHANICS AIR BOATING MOTOR BOATING

FOR MAGAZINE OR PERIODICAL PUBLISHED MONTHLY.
Claims use since May 27, 1918.

Reg. No. 140,220. Registered Mar. 8, 1921. STAR COMPANY, New York, N. Y. Republished by The Hearst Corporation, New York, N. Y., a corporation of Delaware.

BARNEY GOOGLE

FOR SERIES OF CARTOONS OR COMIC STRIPS.
